Interactive Variety Description System (IVDS)

For preparing the detailed description, the Plant Breeder's Rights Office (PBRO) has released the Interactive Variety Description System (IVDS) in the Internet (https://pbr-ivds.ipaustralia.plantbreeders.gov.au/pbr_ivds/) for the Qualified Persons (QPs).

In the beginning of April 2005, all QPs have officially been notified of this new system giving them access to IVDS with their individual user name and password. The main purpose of the system is to harmonise variety descriptions at both national and international level and make the PBR application process as smooth and efficient as possible.

The IVDS allows QPs to fill in descriptions on-line by accessing relevant test guidelines and selecting specific characteristics with their various states of expressions from the options provided. The IVDS incorporated all of the approved UPOV test guidelines (and some national equivalents where a UPOV test guideline is not available) into interactive forms with easy to use drop-down menus. QPs can "build" their own additional/special characteristics if they are not available in the guideline. The IVDS also accepts statistical information.

The IVDS emphasises the use of "grouping characteristics" in selecting comparator varieties. Finally, it allows QPs to lodge the completed variety descriptions on-line. There is a minimum typing involved in the process.

The PBRO anticipates that the QPs had the opportunity to familiarise themselves with IVDS during the testing and demonstration phase (August – Dec 2004) and could operate the system comfortably. There are step by step on-screen instructions with examples in each step of IVDS, which will assist the QPs to complete the process smoothly. In addition, PBRO is ready to help QPs, if they encounter any problem. Please send an e-mail to pbr@ipaustralia.gov.au if there is a problem in completing the description using IVDS.

Objections and revocations

Objections to Applications and Requests for Revocation of a Grant or of a Declaration that a Plant Variety is Essentially Derived from Another Plant Variety

The Plant Breeder's Rights scheme is administered consistent with the model law of the *International Convention for the Protection of New Plant Varieties 1991* (UPOV 91), that is, applicants are entitled to protection, in the absence of proof to the contrary.

The Plant Breeder's Rights Office (PBRO) is not required to advocate for the views, assertions, and opinions of persons challenging an application for plant breeder's rights. Those objecting to applications, requesting revocation of a grant, or seeking a declaration that a plant variety is essentially derived from another plant variety should provide sufficient probative evidence to enable the Secretary to be satisfied of their validity of their claims. It cannot be stressed too strongly that all available evidence ought to accompany the application for objection/revocation/declaration at the outset.

Occasionally the PBRO receives comments on applications. The PBRO seeks to give effect to the processes set out in the PBR Act. The Act provides for a formal objection process, and comments are not formal objections. Where members of the public genuinely believe their commercial interests would be affected and that PBR for a proposed variety ought not to be granted, they are encouraged to use the Act's processes, eg. lodging an objection. Comments are simply informal information from the public to a governmental decision maker. The PBRO will generally not engage in further communication with the commentator regarding their comment, although the comment may be valuable in alerting the PBRO to an important matter of which it was previously unaware.

Objections to Applications

A person may make objections to applications for PBR if (i) their commercial interests would be affected adversely, and (ii) the application will not fulfil all the conditions required by the Plant Breeder's Rights Act.

Objections to applications must be lodged with the Registrar no later than six months after the date the description of the variety is published in this journal. The objector must provide evidence of adverse affect on their commercial interests and that the application should not be granted.

The Registrar of the Plant Breeder's Rights Office (PBRO) is required to give a copy of the objection to the applicant. The objection is also available to the general public on request. The applicant has the opportunity to respond to the evidence presented. The Registrar then decides whether or not the objection will be upheld and, subsequently, whether the application will be granted. The PBRO is under no obligation to enter into further dialogue regarding an objection or to communicate reasons why an objection is not upheld. If an objection is upheld it will be notified in this journal.

A payment of \$100 is required on lodgement of the objection. Additional costs of \$75 per hour for work undertaken in relation to the objection will be billed to the objector.

Requests for Revocation, (where an individual's interests are affected) of:

· **a Grant**

· **a Declaration that a Plant Variety is Essentially Derived**

A person may, when their interests are affected adversely, apply for the revocation of:

· a grant of PBR; or

· a declaration that a plant variety is essentially derived from another plant variety.

The person requesting revocation is required to lodge a revocation payment fee of \$500. The person seeking revocation of a grant or declaration that a plant variety is essentially derived from another plant, must provide conclusive evidence of adverse affect on their interests and that the grant should be revoked.

The PBRO also accepts information regarding revocation of grants and declarations of essentially derived plant varieties. Such information must demonstrate conclusively that a grant or declaration should not have been made. All written information will be acknowledged. The PBRO is under no obligation to enter into further communication regarding information provided.

Report on Breeding Issues

A report providing greater clarification of certain 'difficult' and sometimes controversial plant breeding issues has been finalised by a panel of experts. The report defines 'discovery', 'selective propagation' and 'eligible breeding' methodologies as well as canvassing questions and answers to a range of situations. The principal areas covered are the source population and associated issues relating to ownership, location, homogeneity, parentage, boundaries, and selection from variable material. The issue of essentially derived varieties and the relationship between the first and the second breeder(s) is also explored. The [final report](#) of the expert panel is available now.

Use of Overseas Data

Overseas Testing/Data

The PBR Act allows DUS data produced in other countries (overseas data) be used in lieu of conducting a comparative trial in Australia provided certain conditions are met; relating to the filing of applications, sufficiency of the data and the likelihood that the candidate variety will express the distinctive characteristic(s) in the same way when grown locally. Briefly the overseas data could be considered where:

- The first PBR application relating to the candidate variety has been lodged overseas, and
- the variety has previously been test grown in a UPOV member country using official UPOV test guidelines and test procedures, (i.e. equivalent to a comparative trial in Australia) and
- either, all the most similar varieties of common knowledge (including those in Australia) have been included in the overseas DUS trial, or
- the new overseas variety is so clearly distinct from all the Australian varieties of common knowledge that further DUS test growing is not warranted, and
- sufficient data and descriptive information is available to publish a description of the variety in an accepted format in Plant Varieties Journal; and to satisfy the requirements of the PBR Act.

Taxa that must be trailed in Australia

It is the policy of PBR office to not accept overseas data for the following taxa due to the wide genotype by environment interactions that have been previously experienced. Varietal descriptions from overseas trials have consistently been different from those obtained from trials grown under Australian conditions. Consequently, for the following taxa a full PBR trial must be conducted in Australia:

Solanum tuberosum Potato

The Qualified Person, in consultation with the agent/applicant, and perhaps other specialists and taxonomists, will need to evaluate the overseas data, test report and photographs to see if the application does fulfil all PBR Office requirements, and then advise the agent/applicant:

- either, to submit Part 2 incorporating a description for publication, any additional data and photographs and to pay the examination fee;
- or, to conduct a DUS trial in Australia, recommending to the applicant/agent which additional varieties of common knowledge to include;

- or, submit Part 2 including additional data (information about similar varieties in Australia to show that they are clearly distinct from the candidate variety that a further DUS test growing including the similar varieties is not warranted and that the variety displays the distinctive characteristics when grown in Australia)

Please note that the PBR office does not obtain overseas DUS test reports on behalf of applicants. It is the sole responsibility of the applicants to obtain these reports directly from the relevant overseas testing authorities. Where applicants already have the report they are advised to submit a certified true copy of the report with the Part 1 application. Applicants, or those duly authorised, may certify the copy.

If you do not have the test report available at the time of Part-1 application then you are advised to submit the Part-1 application without the test report. However, you should make arrangements to procure the DUS test report directly from the relevant testing authority. When the report becomes available, a certified copy should be supplied to the QP and the PBR office.

When the trial is based on an UPOV technical guideline and test report in an official UPOV language (English, German or French), it can be lodged in support of the application. In other cases the test reports must be in English.

The applicant/agent and Qualified Person should use the overseas test report to complete Part 2 of the application, making a decision on how to proceed in view of the completeness of the information, the comparators (if any) used in the overseas DUS trial and their knowledge of similar Australian varieties that may not have been included in the overseas test report.

If a description is based on an overseas test report, Australian PBR will not be granted until after the decision to grant PBR in the country producing the DUS test is made. The final decision on the acceptability of overseas data rests with the PBR office.

PBR Infringement

Grantees should be aware of recent revisions to infringement provisions of the [Plant Breeder's Rights Act 1994](#) (see section 54) and related provisions of the Federal Court Rules (see order 58 rule 27) both of which can be found at the [ComLaw site](#)

On-line Database for PBR Varieties

The PBR Office has a comprehensive service for Internet users ~ a searchable database for all Australian PBR varieties, both past and present. The database features a detailed description and image for every variety granted full rights and basic information for other PBR varieties. Searches by genus, species, common name, variety name and titleholder are some of its many advantages. Varieties for which an application has been lodged but not yet accepted in the PBR scheme are not included in this database. Please browse the Plant Breeder's Rights [on-line](#) database and provide your feedback.

Cumulative Index to Plant Varieties Journal

The cumulative index to the [*Plant Varieties Journal*](#) has been updated to include variety information from all hardcopy versions up to volume 16 issue 3. After that issue the Plant Varieties Journal is only published in the electronic format and there is no need for a cumulative index, as the variety information can be easily searched in the PBR [online database](#) and also by downloading the [*Plant Varieties Journal*](#) electronically.

The final updated version of the cumulative index is available in PBR website. This document has information up to Plant Varieties Journal volume 16 issue 3. The PBR office recommends use its PBR [online database](#) to get most updated information on variety registration. The [online database](#) is updated on a weekly basis.

Applying for Plant Breeder's Rights

Applications are accepted from the original breeder of a new variety (from their employer if the breeder is an employee) or from a person who has acquired ownership from the original breeder. Overseas breeders need to appoint an agent to represent their interests in Australia. Interested parties should contact the PBR office and an accredited Qualified Person experienced in the plant species in question.

Steps in Applying for Plant Breeder's Rights

- Obtain from the breeder a signed Authorisation to act as their agent in Australia for the variety in question if your role is as the Australian agent of an overseas breeder;
- Complete [Part 1](#) of the application form, supplying a photograph of the new variety, paying the [application fee](#), nominating an accredited '[Qualified Person](#)' and, if the variety is an Australian species, despatch as soon as possible a [herbarium specimen](#);
- Engage the services of the nominated accredited 'Qualified Person' to plan and supervise the [comparative growing trial](#);
- Conduct a comparative growing trial to demonstrate Distinctness, Uniformity and Stability ([DUS](#)), complete [Part 2](#) of the application form and paying the [examination fee](#);
- Deposit propagating material in a [Genetic Resources Centre](#).
- Examination of the application by the PBR Office, which may include a field examination of the comparative growing trial; and including
- Publication of a description and photograph comparing the new variety with similar varieties in Plant Varieties Journal, followed by a six-month period for objection or comment.
- Upon successful completion of all the requirements, resolution of objections (if any) and payment of [certificate fee](#), the applicant(s) receive a Certificate of Plant Breeder's Rights.

Requirement to Supply Comparative Varieties

Once an application has been accepted by the PBR office, it is covered by provisional protection. Also it immediately becomes a 'variety of common knowledge' and thus may be required by others as a comparator for their applications with a higher application number.

Applicants are reminded that they are required to release propagative material for comparative testing provided that the material is used for no other purpose and all material relating to the variety is returned when the trial is complete. The expenses incurred in the provision of material for comparative trials are borne by those conducting the trials.

As the variety is already under provisional protection, any use outside the conditions outlined above would qualify as an infringement and would be dealt with under section 53 of the [*Plant Breeder's Rights Act 1994*](#).

Applicants having difficulties procuring varieties for use in comparative trials are urged to contact the PBR office immediately

UPOV Developments

The UPOV Convention provides the international legal framework for the granting of plant breeders' rights which are a key element in encouraging breeders to pursue and enhance their search for improved varieties with benefits such as higher yield and quality and better resistance to pests and diseases. Plant breeders' rights thereby help to enhance sustainable agriculture, productivity, income, international trade and economic development in general.

The members of UPOV are (as of Nov 22, 2009):

Albania, Argentina, Australia, Austria, Azerbaijan, Belarus, Belgium, Bolivia, Brazil, Bulgaria, Canada, Chile, China, Colombia, Costa Rica, Croatia, Czech Republic, Denmark, Dominican Republic, Ecuador, European Community, Estonia, Finland, France, Georgia, Germany, Hungary, Iceland, Ireland, Israel, Italy, Japan, Jordan, Kenya, Kyrgyzstan, Latvia, Lithuania, Mexico, Morocco, Netherlands, New Zealand, Nicaragua, Norway, Oman, Panama, Paraguay, Poland, Portugal, Republic of Korea, Republic of Moldova, Romania, Russian Federation, Singapore, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, Trinidad and Tobago, Turkey, Tunisia, Ukraine, United Kingdom, United States of America, Uruguay, Uzbekistan and Vietnam. (Total 68).

Oman became the 68th member of the union on Nov 22, 2009.

Further Information on UPOV and its activities is available on the website located at <http://www.upov.int>

The adopted UPOV Technical Guidelines (TG) for testing different plant species are now available for this website at <http://www.upov.int/en/publications/tg-rom/index.html>

European Developments

Community plant variety rights within the European Union are administered by the Community Plant Variety Office (CPVO) in Angers, France. With more than 2,600 applications per year, the CPVO receives the highest number of requests for variety protection among the members of UPOV. The CPVO provides for one application, one examination and one title of protection that is valid and enforceable in all 27 members of the European Union.

The potential applicants for Plant Variety Rights within European Union are requested to consult [Notes for Applicants](#) published by the Community Plant Variety Office (CPVO). This note aims to answer legal, administrative and financial questions that one may have when requesting Community plant variety rights. Further information is available from [CPVO website](#).

Obligation under the International Convention for the Protection of New Varieties of Plants 1991 (UPOV91)

Consistent with Australia's membership of UPOV 1991, the criteria for the granting of protection under the [Plant Breeder's Rights Act 1994](#) (PBRA) is that the variety: has a breeder; is new, distinct, uniform and stable; has an acceptable name; and that application formalities are completed and relevant fees payed.

Applicants for protection need to be aware of the existence of any other Australian legislation, which could impact on their intended use of the registered variety. Administrators of other Australian legislation may have an interest in applications for registration notified in this journal.

It is feasible for a new variety to be registered under the PBRA, but, as the PBRA co-exists with other laws of the land, the exercise of the breeder's right may be restricted by such legislation. For example, current legislation may prohibit the use of that variety in food, or, the growing of that variety as a noxious weed.

The Plant Breeder's Rights Office (PBRO) advises that it is the responsibility of the applicant and of administrators of legislation to take these matters up directly between the responsible parties and not with the PBRO.

Instructions to Qualified Persons

Instruction to Qualified Persons: Interactive Variety Description System (IVDS) for Preparing Detailed Description for Plant Varieties Journal

For preparing the detailed description, the Plant Breeder's Rights Office (PBRO) has released the Interactive Variety Description System (IVDS) in the Internet (https://pbr-ivds.ipaustralia.plantbreeders.gov.au/pbr_ivds/) for the Qualified Persons (QPs).

In the beginning of April 2005, all QPs have officially been notified of this new system giving them access to IVDS with their individual user name and password. The main purpose of the system is to harmonise variety descriptions at both national and international level and make the PBR application process as smooth and efficient as possible.

The IVDS allows QPs to fill in descriptions on-line by accessing relevant test guidelines and selecting specific characteristics with their various states of expressions from the options provided. The IVDS incorporated all of the approved UPOV test guidelines (and some national equivalents where a UPOV test guideline is not available) into interactive forms with easy to use drop-down menus. QPs can "build" their own additional/special characteristics if they are not available in the guideline. The IVDS also accepts statistical information.

The IVDS emphasises the use of "grouping characteristics" in selecting comparator varieties. Finally, it allows QPs to lodge the completed variety descriptions on-line. There is a minimum typing involved in the process.

The PBRO anticipates that the QPs had the opportunity to familiarise themselves with IVDS during the testing and demonstration phase (August – Dec 2004) and could operate the system comfortably. There are step by step on-screen instructions with examples in each step of IVDS, which will assist the QPs to complete the process smoothly. In addition, PBRO is ready to help QPs, if they encounter any problem. Please send an e-mail to pbr@ipaustralia.gov.au if there is a problem in completing the description using IVDS.

The detailed descriptions are accepted only in the IVDS format.

Also, please note that after finalising the description through IVDS, the QPs will still need to submit the signed hardcopies of the Part 2 documentations in order to complete the application process. Please contact the PBRO (pbr@ipaustralia.gov.au) for further information.

Personal Properties Securities Regime

The new Personal Properties Security (PPS) regime is expected to commence in May 2011. The scheme will harmonise and streamline more than 70 existing pieces of Commonwealth and State and Territory legislation and will establish a national personal property securities register with electronic registration and search processes that will incorporate over 40 different registers of security interests established under the existing legislation.

Personal property is any form of property other than real property (land or buildings and fixtures which are legally treated as forming part of land). As such, personal property includes all of the IP rights administered by IP Australia (i.e patents, trade marks, designs and plant breeder's rights).

The *Personal Property Securities Act 2009* will allow for the recording of security interests against Plant Breeder's Rights on the new PPS register. To ensure harmony with the new regime, notes will be added to relevant sections of the *Plant Breeders Rights Act 1994* by the *Personal Properties Securities (Consequential Amendment) Act 2009*.

A public education awareness program will be developed to advise users on the changes associated with the PPS reforms. More information regarding these changes will be available from IP Australia in the coming months.

Further information about the PPS Scheme can be found on the Attorney General's Department website (<http://www.ag.gov.au/pps>) or by phoning IP Australia on 1300 65 1010.

ACCEPTANCES

The following varieties are under provisional protection from the date of acceptance:

Agave attenuata

AGAVE

'AGAVWS' syn Silver Trim

Application No: 2010/121 Accepted: 21 September, 2010

Applicant: **Lifetech Laboratories Ltd.**

Agent: **Greenhill's Propagation Nursery Pty Ltd**, Tynong, VIC.

Aloe hybrid

ALOE

'Erik the Red'

Application No: 2010/095 Accepted: 17 August, 2010

Applicant: **Leo Peter Erik Thamm.**

Agent: **Michael Dent**, Taringa, QLD.

Alstroemeria hybrid

PERUVIAN LILY

'Koncajoli'

Application No: 2010/146 Accepted: 12 August, 2010

Applicant: **Konst Breeding B.V.**

Agent: **Ball Australia**, Keysborough, VIC.

'Koncavanti'

Application No: 2010/145 Accepted: 12 August, 2010

Applicant: **Konst Breeding B.V.**

Agent: **Ball Australia**, Keysborough, VIC.

'Koncayuko'

Application No: 2010/147 Accepted: 12 August, 2010

Applicant: **Konst Breeding B.V.**

Agent: **Ball Australia**, Keysborough, VIC.

Anigozanthos hybrid

KANGAROO PAW

'Rambocano' syn Bush Volcano

Application No: 2010/093 Accepted: 20 July, 2010

Applicant: **Ramm Botanicals Holdings Pty Ltd.**, Kangy Angy, NSW.

'Rambocity' syn Bush Tenacity

Application No: 2010/132 Accepted: 15 July, 2010

Applicant: **Ramm Botanicals Holdings Pty Ltd.**, Kangy Angy, NSW.

'Ramboneer' syn Bushpioneer

Application No: 2010/133 Accepted: 15 July, 2010

Applicant: **Ramm Botanicals Holdings Pty Ltd.**, Kangy Angy, NSW.

Dianella revoluta

SPREADING FLAX-LILY, BLUEBERRY LILY, BLACK-ANTHER FLAX-LILY, BLUE FLAX LILY

'Dikent' syn Kentlyn

Application No: 2010/114 Accepted: 13 July, 2010

Applicant: **Protected Plant Promotions Australia Pty Ltd., Floraquest Pty Ltd.**

Agent: **Ramm Botanicals Holdings Pty Ltd**, Kangy Angy, NSW.

Dianella tasmanica

FLAX LILY

'Diaust' syn Australiana

Application No: 2010/115 Accepted: 8 July, 2010

Applicant: **Protected Plant Promotions Australia Pty Ltd., Floraquest Pty Ltd.**

Agent: **Ramm Botanicals Holdings Pty Ltd**, Kangy Angy, NSW.

'Snorsby' syn Somersby

Application No: 2010/098 Accepted: 8 July, 2010

Applicant: **Sustainable Natives.**

Agent: **Ramm Botanicals Holdings Pty Ltd**, Kangy Angy, NSW.

Dracaena fragrans

DRAGON TREE

'2004027j' syn Dorado

Application No: 2009/011 Accepted: 20 August, 2010

Applicant: **Dragontree Beheer B.V.**

Agent: **Harts Nursery P/L**, Rochedale, QLD.

'Greenjewel'

Application No: 2009/012 Accepted: 20 August, 2010

Applicant: **Dragontree Beheer B.V.**

Agent: **Harts Nursery P/L**, Rochedale, QLD.

'Jadejewel'

Application No: 2009/008 Accepted: 20 August, 2010

Applicant: **Dragontree Beheer B.V.**

Agent: **Harts Nursery P/L**, Rochedale, QLD.

Duranta stenostachya

DURANTA

'Mini Green'

Application No: 2010/131 Accepted: 14 July, 2010

Applicant: **David Littler**, Shortland, NSW.

Fragaria xananassa

STRAWBERRY

'Aussiegem' syn LouLou Belle

Application No: 2010/174 Accepted: 30 September, 2010

Applicant: **The State of Queensland acting through the Department of Employment, Economic Development and Innovation; Horticulture Australia Limited**, Indooroopilly, QLD.

'Eves Delight'

Application No: 2010/125 Accepted: 6 August, 2010

Applicant: **Edward Vinson Limited**.

Agent: **Red Jewel Fruit Management Pty Ltd**, Ballandean, QLD.

'Redgem'

Application No: 2010/171 Accepted: 30 September, 2010

Applicant: **The State of Queensland acting through the Department of Employment, Economic Development and Innovation; Horticulture Australia Limited**, Indooroopilly, QLD.

‘Sabrina’

Application No: 2010/116 Accepted: 9 July, 2010
Applicant: **Plantas de Navarra, S.A. (Planasa)**.
Agent: **Red Jewel Fruit Management Pty Ltd**, Ballandean, QLD.

‘Sunblushgem’ syn Sweet Melina

Application No: 2010/173 Accepted: 30 September, 2010
Applicant: **The State of Queensland acting through the Department of Employment, Economic Development and Innovation; Horticulture Australia Limited**, Indooroopilly, QLD.

‘Suncoast Delight’

Application No: 2010/172 Accepted: 30 September, 2010
Applicant: **The State of Queensland acting through the Department of Employment, Economic Development and Innovation; Horticulture Australia Limited**, Indooroopilly, QLD.

‘SweetEve’

Application No: 2010/124 Accepted: 23 August, 2010
Applicant: **Edward Vinson Limited**.
Agent: **Red Jewel Fruit Management Pty Ltd**, Ballandean, QLD.

‘Viva Patricia’

Application No: 2010/126 Accepted: 6 August, 2010
Applicant: **Edward Vinson Limited**.
Agent: **Red Jewel Fruit Management Pty Ltd**, Ballandean, QLD.

Fuchsia hybrida

HYBRID FUCHSIA

‘NuFu3’

Application No: 2010/117 Accepted: 21 July, 2010
Applicant: **NuFlora International Pty Ltd**.
Agent: **Sprint Horticulture Pty Ltd**, Wambera, NSW.

Kalanchoe blossfeldiana

KALANCHOE

‘Naomi’

Application No: 2009/146 Accepted: 4 August, 2010

Applicant: **Knud Jepson A/S**.
Agent: **Ball Australia Pty. Ltd.**, Keysborough, VIC.

Kalanchoe blossfeldiana x *laciniata*

KALANCHOE

'KJ 2003 0871' syn African Fall

Application No: 2009/148 Accepted: 4 August, 2010
Applicant: **Knud Jepson A/S**.
Agent: **Ball Australia Pty. Ltd.**, Keysborough, VIC.

Lactuca sativa

LETTUCE

'Greenglace'

Application No: 2010/167 Accepted: 19 August, 2010
Applicant: **Nunhems B.V.**.
Agent: **Shelston IP**, Sydney, NSW.

'Intred'

Application No: 2010/168 Accepted: 18 August, 2010
Applicant: **Nunhems B.V.**.
Agent: **Shelston IP**, Sydney, NSW.

'Redglace'

Application No: 2010/169 Accepted: 18 August, 2010
Applicant: **Nunhems B.V.**.
Agent: **Shelston IP**, Sydney, NSW.

'Salmon'

Application No: 2010/166 Accepted: 18 August, 2010
Applicant: **Nunhems B.V.**.
Agent: **Shelston IP**, Sydney, NSW.

Lolium hybridum

HYBRID RYEGRASS

'LP 534'

Application No: 2010/058 Accepted: 3 September, 2010
Applicant: **New Zealand Agriseeds Limited**.
Agent: **Heritage Seeds Pty Ltd**, Howlong, NSW.

Lupinus albus

WHITE LUPIN

‘WALAB2014’

Application No: 2010/156 Accepted: 17 August, 2010

Applicant: **Western Australian Agricultural Authority and Grains Research Development Corporation and Council of Grain Growers Organisations Ltd**, South Perth, WA.

Macroptilium bracteatum

MACADAMIA

‘08P21-2’

Application No: 2010/161 Accepted: 30 September, 2010

Applicant: **Heritage Seeds Pty Ltd**, Rocklea, Qld.

Macroptilium bracteatum

BURGUNDY BEANS

‘08P24-4’

Application No: 2010/163 Accepted: 30 September, 2010

Applicant: **Heritage Seeds Pty Ltd**, Rocklea, Qld.

Macroptilium bracteatum

BURGUNDY BEANS

‘08P3-2’ syn 08P3-2

Application No: 2010/162 Accepted: 30 September, 2010

Applicant: **Heritage Seeds Pty Ltd**, Rocklea, Qld.

Magnolia grandiflora

SOUTHERN MAGNOLIA

‘Coolwyn Gloss’

Application No: 2010/128 Accepted: 27 July, 2010

Applicant: **Coolwyn Nurseries P/L**, Monbulk, VIC.

Mangifera indica

MANGO

'Maxima' syn No. 64

Application No: 2010/142 Accepted: 10 August, 2010

Applicant: **Flaviano A. Aquilizan**, North Rockhampton, QLD.

'Virginia' syn No. 55

Application No: 2010/141 Accepted: 10 August, 2010

Applicant: **Flaviano A. Aquilizan**, North Rockhampton, QLD.

Medicago sativa ssp. *sativa* x *Medicago sativa* ssp. *falcata*

HYBRID LUCERNE

'KI creepa'

Application No: 2010/195 Accepted: 20 September, 2010

Applicant: **University of Tasmania, The Crown in Right of the State of Tasmania through the Department of Primary Industries, Parks, Water and Environment**, Kings Meadows, TAS.

Musa hybrid

BANANA

'Little Gem'

Application No: 2010/094 Accepted: 2 July, 2010

Applicant: **Tim Johnson**, Condong, NSW.

Petunia hybrid

PETUNIA

'HoobeniS'

Application No: 2009/366 Accepted: 2 August, 2010

Applicant: **Koji Goto, Fusako Goto, Susumu Goto**.

Agent: **Sakata Seed Oceania**, Warragul, VIC.

Prunus avium

SWEET CHERRY

'Rosie Rainier'

Application No: 2010/082 Accepted: 1 July, 2010

Applicant: **Zaiger's Inc. Genetics.**
Agent: **Graham's Factree Pty Ltd**, Hoddles Creek, Vic.

'Royal Edie'

Application No: 2010/081 Accepted: 7 July, 2010
Applicant: **Zaiger's Inc. Genetics.**
Agent: **Graham's Factree Pty Ltd**, Hoddles Creek, Vic.

'Royal Helen'

Application No: 2010/080 Accepted: 7 July, 2010
Applicant: **Zaiger's Inc. Genetics.**
Agent: **Graham's Factree Pty Ltd**, Hoddles Creek, Vic.

Prunus cerasus x *cerasus* x *maackii*

PRUNUS - INTERSPECIFIC PLUM

'LC-52' syn Krymsk 6

Application No: 2010/113 Accepted: 20 July, 2010
Applicant: **Gennady Eremin.**
Agent: **Australian Nurserymen's Fruit Improvement Company (ANFIC) Ltd**, Bathurst, NSW.

Prunus fruticosa x *lannesiana*

PRUNUS - INTERSPECIFIC PLUM

'VSL 2' syn Krymsk 5

Application No: 2010/110 Accepted: 27 July, 2010
Applicant: **Gennady Eremin.**
Agent: **Australian Nurserymen's Fruit Improvement Company (ANFIC) Ltd**, Bathurst, NSW.

Prunus incana x *tomentosa*

WILLOW CHERRY X NANKING CHERRY

'VSV-1' syn Krymsk 2

Application No: 2010/111 Accepted: 20 July, 2010
Applicant: **Gennady Eremin.**
Agent: **Australian Nurserymen's Fruit Improvement Company (ANFIC) Ltd**, Bathurst, NSW.

Prunus persica

PEACH

‘OzDelite HL-1’

Application No: 2010/099 Accepted: 19 July, 2010

Applicant: **Rolfe Nominees Pty Ltd and Prunus Persica Pty Ltd.**

Agent: **Australian Nurserymen's Fruit Improvement Company Limited (ANFIC)**, Bathurst, NSW.

Prunus tomentosa x *cerasifera*

NANKING CHERRY X MYROBOLAN PLUM

‘VVA-1’ syn Krymsk 1

Application No: 2010/112 Accepted: 20 July, 2010

Applicant: **Gennady Eremin.**

Agent: **Australian Nurserymen's Fruit Improvement Company (ANFIC) Ltd**, Bathurst, NSW.

Rosa hybrid

ROSE

‘Aimee Lou’

Application No: 2010/119 Accepted: 3 August, 2010

Applicant: **Australian Roses**, Silvan, VIC.

‘AUSGLADE’

Application No: 2010/130 Accepted: 4 August, 2010

Applicant: **David Austin Roses Limited.**

Agent: **Siebler Publishing Services**, Hartwell, VIC.

‘AUSPASTOR’

Application No: 2010/129 Accepted: 4 August, 2010

Applicant: **David Austin Roses Limited.**

Agent: **Siebler Publishing Services**, Hartwell, VIC.

‘GRA611611’

Application No: 2010/158 Accepted: 17 August, 2010

Applicant: **Mr H Schreuders.**

Agent: **Grandiflora Nurseries Pty Ltd**, Skye, VIC.

‘GRA6971’

Application No: 2010/159 Accepted: 17 August, 2010

Applicant: **Mr H Schreuders.**

Agent: **Grandiflora Nurseries Pty Ltd**, Skye, VIC.

‘GRAsuper’

Application No: 2010/118 Accepted: 3 August, 2010
Applicant: **John C. Gray, Sylvia E. Gray**, Highfields, QLD.

‘Harpresto’

Application No: 2010/041 Accepted: 24 August, 2010
Applicant: **Harkness New Roses Ltd.**
Agent: **Knight's Roses**, Gawler, SA.

Rubus ideaus

RASPBERRY

‘MOUTERE’

Application No: 2010/046 Accepted: 20 July, 2010
Applicant: **The New Zealand Institute for Plant and Food Research.**
Agent: **A J Park**, Canberra, ACT.

Scaevola aemula

FANFLOWER

‘Bonscalib’

Application No: 2009/340 Accepted: 2 July, 2010
Applicant: **Bonza Botanicals Pty Limited.**
Agent: **Oasis Horticulture Pty Limited**, Winmalee, NSW.

‘Bonscawi’

Application No: 2009/339 Accepted: 2 July, 2010
Applicant: **Bonza Botanicals Pty Limited.**
Agent: **Oasis Horticulture Pty Limited**, Winmalee, NSW.

Secale cereale

CEREAL RYE

‘Vampire’

Application No: 2010/064 Accepted: 19 August, 2010
Applicant: **The University of Sydney, Grains Research and Development Corporation**, Kingston, ACT.

Tibouchina organensis x mutabilis

TIBOUCHINA

‘Groovy Baby’

Application No: 2010/140 Accepted: 6 September, 2010

Applicant: **Terence Charles Keogh.**

Agent: **Plants Management Australia Pty. Ltd.**, Dodges Ferry, Tas.

Trifolium repens

WHITE CLOVER

‘Weka’

Application No: 2010/023 Accepted: 3 September, 2010

Applicant: **New Zealand Agriseeds Ltd.**

Agent: **Heritage Seeds Pty Ltd**, Howlong, NSW.

Triticum aestivum

WHEAT

‘ESTOC’

Application No: 2010/185 Accepted: 24 September, 2010

Applicant: **Australian Grain Technologies Pty Ltd**, Urrbrae, SA.

‘JUSTICA CL Plus’

Application No: 2010/188 Accepted: 24 September, 2010

Applicant: **Australian Grain Technologies Pty Ltd**, Urrbrae, SA.

‘KORD CL Plus’

Application No: 2010/186 Accepted: 24 September, 2010

Applicant: **Australian Grain Technologies Pty Ltd**, Urrbrae, SA.

‘SABEL CL Plus’

Application No: 2010/187 Accepted: 24 September, 2010

Applicant: **Australian Grain Technologies Pty Ltd**, Urrbrae, SA.

Vaccinium corymbosum

BLUEBERRY

‘DrisBlueThree’

Application No: 2008/319 Accepted: 30 August, 2010

Applicant: **Driscoll Strawberry Associates, Inc.**

Agent: **Phillips Ormonde & Fitzpatrick**, Melbourne, VIC.

xTriticosecale

TRITICALE

‘Chopper’

Application No: 2010/143 Accepted: 4 August, 2010

Applicant: **Australian Grain Technologies Pty Ltd**, Urrbrae, SA.

Variety Descriptions

<u>Common (Genus Species)</u>	<u>Variety</u>	<u>Title Holder</u>
<u>Swamp Maple</u> <i>(Acer rubrum)</i>	FAIRVIEW FLAME	A McGill & Son
<u>Marguerite Daisy</u> <i>(Argyranthemum frutescens)</i>	BONMADMERLO	Bonza Botanicals Pty Ltd
<u>Marguerite Daisy</u> <i>(Argyranthemum frutescens)</i>	BONMADWITIM	Bonza Botanicals Pty Ltd

Details of Application

Application Number	2009/138
Variety Name	'Weeping Kate'
Genus Species	<i>Dianella caerulea</i> x <i>D. brevipedunculata</i>
Common Name	Blue Flax-Lily
Synonym	Nil
Accepted Date	04 Sep 2009
Applicant	Charles Mines, Francis Benson, Park Ridge, QLD
Agent	Plants Management Australia Pty. Ltd., Dodge Ferry, TAS
Qualified Person	Steve Eggleton

Details of Comparative Trial

Location	Wonga Park VIC
Descriptor	Dianella PBR Dianella
Period	July 2009 - Aug 2010
Conditions	Trial conducted in the open, plants potted from 50mm tubes into 140mm pots during Jul 2009. Pots filled with soilless, pinebark based mix with controlled release fertilizers. Appropriate pest and disease treatments were applied as required.
Trial Design	Twelve pots of each variety in a completely randomised design.
Measurements	From ten plants randomly selected.
RHS Chart - edition	1995

Origin and Breeding

Open pollination followed by seedling selection: During 2004 at 212 Rosia Rd, Park Ridge, QLD, Charles Mines, one of the breeders, grew two parallel stock beds, one of *D. brevipedunculata* and the other *D. caerulea* for seed production. This seed was subsequently raised and during 2005, out of the batch of *D. caerulea*, 50 selections were initially made for showing characteristics of both *D. brevipedunculata* and *D. caerulea* and a shorter plant height. These selections were then transferred to the second breeder, Francis Benson, who grew them on to flowering maturity. Two of the initial selections were further isolated due to their flowering beginning at an earlier stage of plant maturity. One was finally selected on the basis of plant height short, leaf arching strong and flowering period very long. The variety has since been initiated into tissue culture and all subsequent generations have been uniform and stable. Breeders: Charles Mines and Francis Benson.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Plant	height	short
Leaf	colour of upper side	yellow green
Leaf	colour of lower side	yellow green
Leaf	width	narrow
Leaf	variegation	absent
Leaf	spines on margin	absent
Leaf	colour of margin in winter	green

Description: **Steve Eggleton.**, Plant Growers Australia Pty Ltd., Wonga Park, VIC

Details of Application

Application Number	2008/319
Variety Name	'DrisBlueThree'
Genus Species	<i>Vaccinium corymbosum</i>
Common Name	Blueberry
Synonym	Nil
Accepted Date	30 Aug 2010
Applicant	Driscoll Strawberry Associates, Inc, Watsonville, CA
Agent	Phillips Ormonde & Fitzpatrick, Melbourne, VIC
Qualified Person	Margaret Zorin

Details of Comparative Trial

Overseas Testing	US Patent & Trademark Office (USPTO)
Authority	
Overseas Data	PP20,436
Reference Number	
Location	Watsonville, California USA and verified Birkdale QLD, Australia 2009
Descriptor	Blueberry (<i>Vaccinium myrtillus</i>) TG/137/3
Period	2000-2007
Conditions	Plants were grown in full sunlight under standard blueberry production conditions in rows side by side in Watsonville, Santa Cruz County, California USA for seven years.
Trial Design	Plants were asexually propagated by softwood cuttings in a nursery and transfer to the field occurred when plants were 6-9 months old. Plants of 'DrisBlueThree' were planted in adjacent rows to 'O'Neal' (an unpatented major variety) for comparative purposes.
Measurements	Observations and measurements were made in accordance with UPOV guidelines. Colour descriptions follow the Royal Horticultural Society Colour Chart, London (R.H.S.)
RHS Chart - edition	2001

Origin and Breeding

Controlled pollination: The new variety 'DrisBlueThree' originated from controlled cross pollination between the blueberry plants 'FL98-11' (seed parent) and 'FL89-152' (male parent). The resultant selected seedling of 'DrisBlueThree' was asexually propagated by softwood cuttings at a nursery in Watsonville, Monterey, California USA and underwent further testing for seven years. The variety 'DrisBlueThree' has been found to be stable and reproduce true to type through successive asexual propagations. Breeders: Brian Caster and Dr Arlen Draper both employees of Driscoll Strawberry Associates Inc. Watsonville, California USA.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Fruit	size	medium
Flower	fragrance	very faint
Leaf	arrangement	alternate
Leaf	margin	entire

Details of Comparative Trial

Overseas Testing	Community Plant Variety Office (CPVO)
Authority	
Overseas Data	20082033
Reference Number	
Location	Hannover, Germany
Descriptor	New Guinea <i>Impatiens</i> (new) (<i>Impatiens</i> New Guinea Group) TG/196/2
Period	2009
Conditions	Comparisons of most characteristics were based on trials in Hannover, Germany in 2009. Characteristics were verified on plants grown in Keysborough, VIC, Australia in Oct 2010. Data for the comparator was taken from the Canadian PBR variety description for variety Misato FG3 ('Sunpatiens Magenta'), Certificate number 2688.
Trial Design	Randomised block design.
Measurements	From 10 randomly selected plants or plant parts
RHS Chart - edition	Fifth edition.

Origin and Breeding

Controlled pollination followed by seedling selection: In April 2002 the female parent line 'NG-02WM' and male parent line 'NG-01H-9A' were crossed and a population of F1 plants was created. The F1 plants were evaluated in Misato, Japan in an open field trial. The criteria for plant selection included flower colour, strong root system and compact plant growth habit. At the completion of the trial, one single-plant selection was made based on the above criteria and vegetatively propagated. From May to Aug 2005 the selection was evaluated in an open field in Misato, Japan. Shoot-tip cuttings of the variety were then shipped to Salinas, California, where the plants were regenerated and re-evaluated for stability of traits. The selection subsequently was named 'SAKIMP012' and found to have its unique characteristics reproduce true to type in successive generations of asexual propagation.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Leaf blade	marking of upper side	absent
Flower	type	single

Details of Application

Application Number	2001/077
Variety Name	'Todd'
Genus Species	<i>Ulmus parvifolia</i>
Common Name	Chinese Elm
Synonym	
Accepted Date	20 Apr 2001
Applicant	Fleming's Nurseries Pty Ltd, Monbulk, VIC
Agent	
Qualified Person	Peter Todd

Details of Comparative Trial

Location	Monbulk, VIC
Descriptor	Chinese Elm (<i>Ulmus parvifolia</i>) PBR ULMU
Period	2001 – present
Conditions	Plants were growing vegetatively. All trees healthy and showing no obvious signs of disease.
Trial Design	Trees of the candidate and comparators were randomly planted in 2 rows.
Measurements	From all trial trees.
RHS Chart - edition	1986

Origin and Breeding

Seedling selection : *Ulmus parvifolia*. This cultivar originates from a seedling selection 'Selection 8A' chosen for its central leader and superior growth habit. It was subsequently propagated, through several generations using both cuttings and buddings on to *Ulmus parvifolia* has proven to be distinct uniform and stable. Breeder: Peter Todd..

First sold in Australia May 2000 as 'Selection 8A'

Description: **Peter Todd**, Monbulk, VIC.

Details of Application

Application Number	2009/235
Variety Name	'Sicot 70BL'
Genus Species	<i>Gossypium hirsutum</i>
Common Name	Cotton
Synonym	Nil
Accepted Date	28 Sep 2009
Applicant	Commonwealth Scientific and Industrial Research Organisation, Campbell, ACT and Cotton Seed Distributors Ltd, Wee Waa, NSW.
Agent	N/A
Qualified Person	Warwick Stiller

Details of Comparative Trial

Location	Australian Cotton Research Institute, Narrabri, NSW
Descriptor	Cotton (<i>Gossypium</i>) TG/88/6
Period	2009/10 summer
Conditions	Field grown irrigated trial with conventional management.
Trial Design	12 entry trial in a row and column design with six replicates and two rows x 14m plots.
Measurements	Morphological measurements on 10 plants from each plot. Yield components and fibre quality measurements taken on a hand harvested sample of three consecutive plants. Fibre quality was measured on a Zellweger Uster HVI 1000 instrument.
RHS Chart - edition	N/A

Origin and Breeding

Controlled pollination: seed parent line 'Sicot 71B' x pollen parent line 61717F2 in a planned breeding program at the Australian Cotton Research Institute (ACRI), Narrabri NSW. The seed parent line 'Sicot 71B' is distinguished from 'Sicot 71BL' by its lack of 'pat' protein expression (Liberty Link - confers resistance to Glufosinate herbicide). The pollen parent line 61717F1 is distinguished from 'Sicot 71BL' by its segregation for Cry 1Ac and Cry 2Ab protein expression. Single plant selection followed by progeny row and multiple environment trials were carried out. Selection criteria: Cry1Ac, Cry2Ab and Liberty Link genes, plant habit, resistance to bacterial blight, verticillium and fusarium wilt, leaf hair, lint %, fibre quality and yield. Breeders: Mr Peter Reid, Dr Shiming Liu, Dr Warwick Stiller and Dr Greg Constable, CSIRO, Narrabri NSW

Description: **Warwick Stiller**, CSIRO, Cotton Research Unit, Narrabri, NSW.

Details of Application

Application Number	2009/104
Variety Name	'Sicot 71RRF'
Genus Species	<i>Gossypium hirsutum</i>
Common Name	Cotton
Synonym	Nil
Accepted Date	26 Jun 2009
Applicant	Commonwealth Scientific and Industrial Research Organisation, Campbell, ACT and Cotton Seed Distributors Ltd, Wee Waa, NSW.
Agent	N/A
Qualified Person	Warwick Stiller

Details of Comparative Trial

Location	Australian Cotton Research Institute, Narrabri, NSW.
Descriptor	Cotton (<i>Gossypium</i>) TG/88/6.
Period	2009/10 summer
Conditions	Field grown irrigated trial with conventional management.
Trial Design	12 entry trial in a row and column design with six replicates and two rows x 14m plots.
Measurements	Morphological measurements on 10 plants from each plot. Yield components and fibre quality measurements taken on a hand harvested sample of three consecutive plants. Fibre quality was measured on a Zellweger Uster HVI 1000 instrument.
RHS Chart - edition	N/A

Origin and Breeding

Controlled pollination: seed parent line 'Sicot 71' x pollen parent line 63612F1 in a planned breeding program at the Australian Cotton Research Institute (ACRI), Narrabri NSW. The seed parent line 'Sicot 71' is distinguished from 'Sicot 71RRF' by its lack of CP4 protein expression (Roundup Ready Flex gene). The pollen parent line 63612F1 is distinguished from 'Sicot 71RRF' by its segregation for CP4 protein expression. Single plant selection followed by progeny row and multiple environment trials were carried out. Selection criteria: Roundup Ready Flex gene, plant habit, resistance to bacterial blight, verticillium and fusarium wilt, leaf hair, lint %, fibre quality and yield. Breeders: Mr Peter Reid, Dr Warwick Stiller and Dr Greg Constable, CSIRO, Narrabri NSW.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties

Description: **Warwick Stiller**, CSIRO, Cotton Research Unit, Narrabri, NSW.

Details of Application

Application Number	2009/193
Variety Name	'PBA Kareema'
Genus Species	<i>Vicia faba</i>
Common Name	Field Bean
Synonym	Kareema
Accepted Date	28 Sep 2009
Applicant	Adelaide Research & Innovation Pty Ltd, Adelaide SA and Grains Research Development Corporation, Barton ACT.
Agent	Adelaide Research & Innovation Pty Ltd
Qualified Person	Jeff Paull

Details of Comparative Trial

Location	Charlick Experimental Farm, Strathalbyn, SA, and Waite Campus Urrbrae, SA
Descriptor	Field bean (<i>Vicia faba</i>) TG/8/4
Period	May – Dec 2009
Conditions	Field plots 6m long x 6 rows, 25cm spacing between rows. Sown 29 May at 15 seeds/m ² into cultivated field, with standard fertilizer, herbicide and insecticide application as per commercial faba bean production. Rain-fed, average seasonal rainfall, extreme heat during mid to late pod fill restricted seed size and development of youngest pods. Harvested with plot harvester at maturity. Disease testing in a glasshouse at Waite Campus in controlled conditions with temperature control (max temp = 20°C) and automated irrigation.
Trial Design	Randomised complete block design with 4 replications.
Measurements	Time of flowering, 26 Aug – 10 Sep. Plant height, 3 positions per plot, 6 Nov. Pod length and seeds per pod, a single pod sampled from each of 20 plants per plot at mid-point of the main stem at maturity. Seed weight, 3 samples of 100 seeds per plot, sub-sampled after harvest and cleaning to remove broken seeds. Resistance to <i>Ascochyta</i> blight, seedlings in a glasshouse, rating scale of 1 (resistant) – 9 (very susceptible).
RHS Chart - edition	N/A

Origin and Breeding

Single plant selection: 'Aquadulce' Approximately 60 single plant selections of broad bean var. 'Aquadulce' were made within a crop at Rendelsham, SA, in Jan 1997. Individual plant progenies were grown in a screenhouse at Waite Campus in 1997, harvested separately and assessed for uniformity of seed size and colour. Lines with off-type seed were discarded. Individual progenies were grown as bulks at Waite Campus in 1998 and evaluated in yield trials commencing in 1999. Selection 57/6 was identified as having high yield potential in trials in 1999-2002. In 2003, 57/6 was screened for resistance to *Ascochyta* blight in a glasshouse at Waite Campus and approx 70 resistant plants were retained. Progeny of resistant plants were grown in a screenhouse in 2004 and each family was harvested as a bulk. Families with off-type seeds (poor size or colour, including green seed) were discarded. Seed weights of the retained families were determined and those with similar seed weights were combined to form three bulks (17 plant progeny included in bulk 1). The three bulks were

multiplied in open-pollinated isolation plots (minimum of 200 m separation from all other *V. faba* plots) at Glenthorne Research Station, O'Halloran Hill SA in 2005. Selection 57/6-1 (released as 'PBA Kareema') was multiplied in open-pollinated blocks in isolation of all other *V. faba* in 2006 and 2007. Multiplication of 'PBA Kareema' on-farm commenced at Rendelsham in 2008. Breeder: Jeff Paull, University of Adelaide.

Details of Application

Application Number	2009/026
Variety Name	'Empress'
Genus Species	<i>Gomphrena leontopodioides</i>
Common Name	Gomphrena
Synonym	Nil
Accepted Date	15 Jun 2009
Applicant	The University of Queensland, Brisbane
Agent	n/a
Qualified Person	Dr Dion Harrison

Details of Comparative Trial

Location	Gatton, QLD, Australia
Descriptor	Gomphrena (<i>Gomphrena leontopodioides</i>) PBR GOMP
Period	Feb 2009 to Oct 2010
Conditions	Plants were propagated by cuttings and grown in 175 mm pots in a soil-less medium under greenhouse conditions, fertilised with controlled release fertiliser and drip irrigated.
Trial Design	Complete randomised design with equal replication.
Measurements	Measurements were taken from 20 plants or parts per variety.
RHS Chart - edition	1966

Origin and Breeding

Selection: A large batch of seed was collected from a wild population and planted on 6 Feb 2007 which yielded a widely diverse seedling population. The selection was identified as having the following unique combination of characteristics: early flowering, compact habit, foliage colour (green to silver), inflorescence colour (mid purple-pink tepal blades and corolla tube), and ease of propagation by cuttings. Breeders: Margaret Johnston, Dion Harrison, Daryl Joyce and Melinda Perkins.

Description: Dr Dion Harrison, **Gatton**, QLD, Australia

Details of Application

Application Number	2000/217
Variety Name	'Notwoodtwo'
Genus Species	<i>Hibiscus syriacus</i>
Common Name	Hibiscus
Synonym	White Chiffon
Accepted Date	10 Aug 2000
Applicant	Notcutts Ltd
Agent	Fleming's Nurseries Pty Ltd
Qualified Person	Peter Todd

Details of Comparative Trial

Overseas Testing Authority	Plant Variety Rights Office – United Kingdom
Overseas Data Reference Number	AFP 23/214
Location	Monbulk
Descriptor	Hibiscus (<i>Hibiscus</i>) TG/HIBIS (proj. 1)
RHS Chart - edition	1986

Origin and Breeding

Open pollination: unknown breeding line. The new variety originated as a seedling from unknown parentage. Propagation of this new variety is by grafting onto *Hibiscus syriacus* rootstock. The variety is true to its characters – flowers having numerous petaloids at base of outer petal giving impression of semi-double flowers. for more than 10 generations. Breeder: Dr R Woods

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Origin and Breeding

Controlled pollination: 'Leggenda'X' Nunhem line72971085' the candidate variety, 'CUORE', was selected over 6 generations using a pedigree selection procedure. Some F1 seeds from this cross were self-pollinated. Pedigree selection was performed from the 2nd to 5th generation. Selection criteria were: Head: shape and size; Plant: vigour; Bolting: time to begin; Leaf: colour; and Disease resistance (*Bermia lactucae*). The selection work was conducted at Nunhems B.V. breeding station, Gravendanze, The Netherlands. Line selection was performed from the 6th to 8th generation. 'CUORE' was selected in the 6th generation and has been stable, uniform and free of off-types at different locations and during seed increase. Breeder: Jan van Schijndel.

Origin and Breeding

Controlled pollination: 'Multy'X'Nunhem line 72971086' F1 seeds from this cross were self-pollinated. Pedigree selection was performed from the 2nd to 5th generation. Selection criteria were: Leaf: shape, uniformity, shininess, thickness; Disease resistance: *Bremia lactucae*. The selection work was conducted at Nunhems B.V. breeding station, Gravendanze, The Netherlands. Line selection was performed from the 6th to 8th generation. 'MULTIGREEN 2' was selected in the 6th generation and has been stable, uniform and free of off-types at different locations and during seed increase. . Breeder: Jan van Schijndel (Nunhems B.V.'s lettuce breeder).

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Origin and Breeding

Controlled pollination: 'Iruza' X 'Nunhem's line 71970254' F1 seeds from this cross were self-pollinated. Pedigree selection was performed from the 2nd to 5th generation. Selection criteria were: Plant: type; and Disease resistance (*Bremia lactucae*). The selection work was conducted at Nunhems B.V. breeding station, Gravendanze, The Netherlands. Line selection was performed from the 6th to 8th generation. 'MULTIBLOND 1' was selected in the 6th generation and has been stable, uniform and free of off-types at different locations and during seed increase. Breeder: Jan van Schijndel.

Details of Comparative Trial

Overseas Testing	Canadian Plant Varieties Office. Ottawa, Canada
Authority	
Overseas Data	31301-3526
Reference Number	
Location	Overseas data was verified under local conditions in Winmalee, NSW
Descriptor	Argyranthemum (new) (<i>Argyranthemum frutescens</i>) TG/222/1
Period	Feb 2010 – Jul 2010
Conditions	Trial conducted in outside commercial production area, rooted cuttings (propagated from stock plants grown at Winmalee) potted into 150mm standard pots in commercial potting mix, nutrients supplied by slow release and liquid feed fertiliser application, plant protection treatments applied as necessary. No pinching or other plant shaping treatments were applied.
Trial Design	10 plants of the candidate variety were grown to confirm overseas test report data.
Measurements	Taken at random from 10 plants.
RHS Chart - edition	2001

Origin and Breeding

Controlled pollination: Proprietary breeding line '04-133' x proprietary breeding line '04-121' in a planned breeding program. Seed parent is characterised by foliage colour medium green, flower type anemone, and flower colour dark maroon. Pollen parent is characterised by foliage colour medium green, flower type anemone, and flower colour medium pink. Selection criteria: foliage colour, plant habit, flower habit, flower colour. Selection was done at Winmalee, NSW, in Apr 2005. Propagation: by vegetative tip cuttings, no off types occurred in at least three successive vegetative generations during the selection process and in numerous vegetative generations since selection. 'Bonmadmerlo' will be commercially propagated by vegetative tip cuttings. Breeder: Dr Andrew Bernuetz, Winmalee, NSW.

USA	2006	Granted	'BONMADCINK'

First sold in the Netherlands 2006.

Description: **Tim Angus**, New Zealand.

Details of Application

Application Number	2005/243
Variety Name	'Burnectseven'
Genus Species	<i>Prunus persica</i> var. <i>nucipersica</i>
Common Name	Nectarine
Synonym	
Accepted Date	25 Jul 2005
Applicant	The Burchell Nursery, Inc., USA
Agent	Agrisearch Services Pty Ltd, Shepparton, VIC
Qualified Person	Leslie Mitchell

Details of Comparative Trial

Overseas Testing Authority	US Patents and Trademarks Office
Overseas Data Reference Number	PP13589
Location	
Descriptor	Peach/Nectarine (<i>Prunus persica</i>) TG/53/6
Period	
Conditions	Where possible the overseas data was verified under local conditions. The US plant patent data was converted into standard UPOV characteristics for peach.

RHS Chart - edition**Origin and Breeding**

Controlled pollination: 'Summer Red' x 'Diamond Ray' One seedling represented here as 'Burnectseven', exhibited especially desirable characters and was marked for subsequent observation. After the 1997 season the new present variety was selected for advanced evaluation and re-propagation. Asexual production of the new 'Burnectseven' was accomplished by budding onto 'Nemagard' rootstock (non-patented). This was performed at the Burchell nursery at Fowler, USA.. Subsequent evaluations have shown those asexual reproductions run true to the original tree. All characteristics of the original tree and its fruit were established and appear to be transmitted through succeeding asexual propagations. Breeder: Thomas Burchell, USA.

Conditions	Where possible the overseas data was verified under local conditions. The US plant patent data was converted into standard UPOV characteristics for peach.

Origin and Breeding

Controlled pollination: 'Crimson Baby' x 'unnamed seedling'. The seed parent is yellow fleshed nectarine and the pollen parent is the sub acid white fleshed, nectarine. One seedling, presented here as 'Burnectfourteen', exhibited especially desirable characteristics, and was marked for future observation. After the 1998 growing season the new, present variety, was selected for advanced evaluation and repropagation. Asexual reproduction of the new and distinct variety of nectarine was accomplished by budding the new nectarine to 'Nemagard' rootstock. This was performed at the Burchell Fowler nursery. Subsequent evaluations have shown those asexual reproductions run true to the original tree. All characteristics of the original tree and its fruit were established and appear to be transmitted through succeeding asexual propagations.

Details of Application

Application Number	2009/016
Variety Name	'Balcelimpik'
Genus Species	<i>Impatiens hawkeri</i>
Common Name	New Guinea Impatiens
Synonym	Nil
Accepted Date	03 Jul 2009
Applicant	Ball Horticultural Company, West Chicago, USA
Agent	Oasis Horticulture Pty Limited, Winmalee, NSW
Qualified Person	Tim Angus

Details of Comparative Trial

Overseas Testing	Canadian PVRO, Ottawa, Canada.
Authority	
Overseas Data	31301-3648
Reference Number	
Location	Overseas data was verified under local conditions in Winmalee, NSW.
Descriptor	TG/196/2
Period	Feb 2010 to Jul 2010
Conditions	Trial conducted in commercial production greenhouse, rooted cuttings (propagated from stock plants grown at Winmalee) potted into 150mm standard pots in commercial potting mix, nutrients supplied by slow release and liquid feed fertiliser application, plant protection treatments applied as necessary. No pinching or other plant shaping treatments were applied.
Trial Design	10 plants of the candidate variety were grown to confirm overseas test report data.
Measurements	Taken at random from 10 plants.
RHS Chart - edition	2001

Origin and Breeding

Controlled pollination: 'Balcelpink' x proprietary breeding line '8225-b' in a planned breeding program. Seed parent is characterised by shorter plant height; wider plant width; smaller flower size. Pollen parent is characterised by flower colour coral orange. Selection criteria: foliage colour, plant habit, flower habit, flower colour. Selection was done at Arroyo Grande, California, in Feb 2004. Propagation: by vegetative tip cuttings, no off types occurred in at least three successive vegetative generations during the selection process and in numerous vegetative generations since selection. 'Balcelimpik' will be commercially propagated by vegetative tip cuttings. Breeder: Leslie Heffron, Ball Horticultural Company, West Chicago, Illinois, USA.

Conditions	Where possible the overseas test data was verified under local conditions. The US plant patent data was converted into standard UPOV characteristics for peach.

Origin and Breeding

Controlled pollination: 'A37.035' x 'A48-70'. The female parent is a late maturing clingstone peach which was used as the seed parent and the pollen parent is another later maturing a peach tree. One seedling, named here as 'Burpeachthirteen', exhibited desirable characteristics and was marked for subsequent observation. After the 1997 season, the new variety, was selected for advanced evaluation and propagation. Asexual reproduction of 'Burpeachthirteen' was accomplished by budding on 'Nemagard' rootstock, then evaluating the resultant growth at the Fowler farm. Subsequent evaluations have shown that those asexual reproductions run true to the original tree. All characteristics of the original tree and its fruit were established and appear to be transmitted through succeeding asexual propagations. Breeder: Thomas Burchell, USA.

Origin and Breeding

Controlled pollination: 'A48-70' peach x unnamed nectarine. The seedling 'Burpeachseven' was originated by Burchell Nurseries in 1994, and chosen from a population of seedlings which resulted from a controlled cross of the unnamed peach, 'A48-70' (unpatented), used as the seed parent, and an unnamed nectarine, which was used as the pollen parent. Resulting seed from this cross were planted in the spring of 1995. The new variety was selected from among seedlings growing in experimental orchards near the city of Fowler, California, County of Fresno, in the central portion of the San Joaquin Valley of California, USA. 'Burpeachseven' was marked for subsequent observation during the 1997-2000 fruit growing seasons. After the 1997 season, the 'Burpeachseven' peach tree was selected for advanced evaluation and repropagation. Breeder: Thomas Burchell, USA.

Origin and Breeding

Controlled pollination: 'B2.026' peach x B17.025' nectarine. The seed parent is yellow fleshed peach and the pollen parent is a white fleshed nectarine. The seedling later to be known as 'Burpeachfifteen' exhibited desirable characteristics and was designated as 'E24.018' for further evaluation. After the 1999 season, 'E24.018' was selected for advanced evaluation and propagation. Asexual reproduction of 'Burpeachfifteen' was accomplished by budding to 'Namagard' rootstocks after the 1999 growing season. This was done at the Burchell's Fowler property. Subsequent evaluations performed in latter years have shown those asexual reproductions to run true to the original tree. All characteristics of the original tree and its fruit were established and appear to be transmitted through succeeding asexual propagations. Breeder: Thomas Burchell, USA.

Origin and Breeding

Controlled pollination: Unknown peach line x P113-98. The seed parent is a an early ripening, white fleshed clingstone nectarine. The pollen parent yellow fleshed freestone peach. The pollen parent is an early ripening, white fleshed clingstone nectarine. The seedling 'Burpeachnineteen' was originated from a population of seedlings growing in the BURCHELL Experimental nursery near Fowler in California. One seedling, represented here as 'Burpeachnineteen', exhibited especially desirable characteristics, and was marked for subsequent observation. After the 1999 fruiting season, the new present variety was selected for advanced asexual repropagation. Asexual reproduction of the new distinct variety of peach was accomplished by budding the new peach onto 'Nemagard' rootstocks (non patented). This was performed at the BURCHELL experimental orchard at Fowler. Subsequent evaluations have shown those asexual reproductions run true to the original tree. All characteristics of the original tree and its fruit were established and appear to be transmitted through succeeding asexual propagations.

Details of Application

Application Number	2009/171
Variety Name	'Pretty Petite'
Genus Species	<i>Armeria alliacea</i>
Common Name	Plantain Thrift
Synonym	Nil
Accepted Date	21 Dec 2009
Applicant	Plant Growers Australia, Wonga Park, VIC
Agent	Plants Management Australia Pty. Ltd., Dodges Ferry, TAS
Qualified Person	Steve Eggleton

Details of Comparative Trial

Location	Wonga Park, VIC
Descriptor	<i>Armeria</i> Draft Descriptor
Period	Jan 2010 to Oct 2010
Conditions	Trial conducted in the open, plants propagated from cuttings during January 2010, transferred from plugs to 140mm pots in April 2010. Pots filled with soilless, pinebark based mix with controlled release fertilizers. Appropriate pest and disease treatments were applied as required.
Trial Design	Twelve pots of each variety in a completely randomised design.
Measurements	From ten plants randomly selected.
RHS Chart - edition	1995

Origin and Breeding

Spontaneous mutation: First observed as a whole plant mutation on *Armeria alliacea* 'Pink Petite' in a commercial production batch during Sep 2006 at Wonga Park, VIC, Australia. This mutation was isolated and then allowed to continue to grow throughout the spring-summer period of 2006/2007 where it was continually evaluated. Cuttings were taken during Feb 2007 to produce a new generation for evaluation, which occurred in Sep 2007. Final selection criteria: flower colour dark pink and inflorescence length short. Propagation: via cuttings. All plants have been found to be uniform and stable.

Reference Number	
Location	Solan Pty Ltd, Waikere, SA
Descriptor	Potato (<i>Solanum tuberosum</i>) TG/23/6
Period	Apr 2010
Conditions	In Controlled Environment Greenhouse and Compared with data from O/S test report.
Trial Design	Compared Plants growing in Controlled Environment Greenhouse.
Measurements	Observations of vegetative characteristics, flowers were not produced due to day length, floral observations based on UPOV data from overseas test report. Light sprout data from overseas test report and verified locally, tuber characteristics from Overseas test reports and verified against field grown material produced in Tasmania. Local observations on vegetative characteristics and tubers for 'Cecile' and 'Rodeo' were based on UPOV Guidelines for Potato (TG/23/6).
RHS Chart - edition	n/a

Origin and Breeding

Controlled Pollination of 'Nicola' (yellow flesh, yellow skin, medium maturity and white flowers) x RZ-88-404 (red skin and medium long dormancy). The F₁ from this cross was selected and named 'Cecile'. The variety was selected for agronomic characters, quality and disease resistance and trialled for 14 years in several locations in Holland and elsewhere. Breeder: HZPC Holland BV.

Period	Apr 2010
Conditions	Plants grown from tissue culture ex Genetic Resource Centre
Trial Design	Plants grown in 8" pots in a controlled environment greenhouse and data from three random plants collated.
Measurements	Vegatative data recorded and compared with data from overseas test report. Floral data is from overseas test report and published data for 'Amorosa'. Tuber and lightsprout data collected locally in Tasmania and verified against overseas test report.
RHS Chart - edition	n/a

Origin and Breeding

Controlled pollination of 'Redstar' (red skin, yellow flesh) x 'Caesar' (yellow skin, yellow flesh) in 1993. The F₁ from this cross were tested for agronomic characters, quality and resistance to diseases and pest from numerous trails in various European countries over ten years. Breeder: HZPC Holland BV.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Tuber	skin colour	Red
Tuber	colour of base of eye	White

Most Similar Varieties of Common Knowledge identified (VCK)

Name	Comments
'Amorosa'	The tubers of 'Mozart' and 'Amorosa' are very similar and both have the characteristic white colour at the base of the eyes.

Varieties of Common Knowledge identified and subsequently excluded

Variety	Distinguishing Characteristics		State of Expression in Candidate Variety	State of Expression in Comparator Variety
'Desiree'	tuber	flesh colour	medium yellow	light yellow
'Desiree'	tuber	colour of base of eyes	yellow	red
'Desiree'	tuber	Depth of eyes	shallow	medium

Variety Description and Distinctness - Characteristics which distinguish the candidate from one or more of the comparators are marked with a tick.

Location	Sophia-Antipolis, France
Descriptor	Rose (<i>Rosa</i> hybrid) TG/11/7
Period	2001
RHS Chart - edition	1995

Origin and Breeding

Controlled pollination: Frybright x 'Bucbi' in 1993. The main selection criteria used to develop this variety were flower colour, abundance of flowers, ornamental foliage and high disease resistance. 'Frybright' has a strong fragrance and orange blend flowers while 'Radrazz' has a weak fragrance and red purple blend flowers. 'Bucbi' has medium pink flowers while 'Radrazz' has red purple blend flowers. The variety has remained uniform and stable after many generations of propagation. Breeder: William J Radler, Greenfield, USA.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Plant	growth habit	bushy to broad bushy

Common Name	Southern Magnolia
Synonym	
Accepted Date	20 Jun 2002
Applicant	Athena Trees, Inc., USA
Agent	Fleming's Nurseries Pty Ltd, Monbulk, VIC
Qualified Person	Peter Todd

Details of Comparative Trial

Overseas Testing Authority	U.S. Patent and Trade marks Office
Overseas Data Reference Number	IP 9,243
Location	Where possible the US Plant Patent data was verified under local conditions in Monbulk, Victoria.
Descriptor Period	Magnolia (<i>Magnolia</i>) PBR MAGN
Conditions	Where possible the US Plant Patent data was verified under local conditions in Monbulk Victoria. The US Plant Patent data was converted into the standard UPOV descriptors.
RHS Chart - edition	1986

Origin and Breeding

Seedling selection: *Magnolia grandiflora*. The parent tree of the new variety was discovered as it was growing in a cultivated area at a residence located in Campton, Ga. This tree was planted at this residence as a two-year old container-grown seedling of unknown parentage and has not been transplanted. The desirable candle flame shape habit, dense form and unusual leaves, being that they are both convex in shape and have a light green undercolour, resulted in the tree to be selected for asexual propagation and commercialisation. Propagation was achieved via cuttings and the progeny have all displayed the desirable characteristics first selected.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Details of Application

Application Number	2009/294
Variety Name	'DrisStrawTen'
Genus Species	<i>Fragaria x ananassa</i>
Common Name	Strawberry
Synonym	Nil
Accepted Date	11 Dec 2009
Applicant	Driscoll Strawberry Associates, Inc, Watsonville, CA
Agent	Phillips Ormonde & Fitzpatrick, Melbourne, VIC
Qualified Person	Margaret Zorin

Details of Comparative Trial

Overseas Testing	US Patent & Trademark Office (USPTO)
Authority	
Overseas Data	PP20,775
Reference Number	
Location	Monterey, California USA, verified Birkdale QLD Australia
Descriptor	Strawberry (<i>Fragaria</i>) TG/22/9
Period	2004-2008
Conditions	Grown under full sunlight and standard commercial strawberry production conditions in Monterey, California USA.
Trial Design	Plants were asexually propagated in a nursery and planted in rows with 'Lanai' and 'San Juan' as comparators.
Measurements	The following description of 'DrisStrawTen' is based on observations and measurements in accordance with UPOV guidelines and terminology. The colour terminology follows The Royal Horticultural Society Colour Chart, London (RHS).
RHS Chart - edition	2001

Origin and Breeding

Controlled pollination: 'DrisStrawTen' was discovered in 2004 in Monterey, California USA and resulted from cross-pollination between unpatented breeding lines '94J283' (female parent) and '112H25' (pollen parent). The original seedling was asexually propagated in a nursery in 5 successive years and planted in the field for evaluation. During this time 'DrisStrawTen' was found to maintain its distinctive characteristics. Breeders: Bruce D. Mowrey, Plillip J. Stewart, Martin P Madesko and JoAnne Coss. All are employees of Driscoll Strawberry Associates Inc. Watsonville, California USA.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Terminal leaflet	length/width ratio	as long as broad
Leaf colour	upper side	dark yellow-green

Details of Application

Application Number	2010/171
Variety Name	'Redgem'
Genus Species	<i>Fragaria xananassa</i>
Common Name	Strawberry
Synonym	Nil
Accepted Date	30 Sep 2010
Applicant	The State of Queensland acting through the Department of Employment, Economic Development and Innovation Brisbane, QLD and Horticulture Australia Limited, Sydney, NSW
Agent	N/A
Qualified Person	Mark Herrington

Details of Comparative Trial

Location	Maroochy Research Station, Nambour, QLD (26°37' South, 152°57' East, elevation 29m).
Descriptor	Strawberry (new) (<i>Fragaria</i>) TG/22/10.
Period	Apr – Aug 2010
Conditions	Trial conducted at Maroochy Research Station Nambour, QLD (Apr – Aug 2010) in a non-fumigated field, runners from commercial sources in QLD runner growing district (Stanthorpe), black polythene mulch, double rows on beds (24cm inter-row, 35 cm intra-row and 140cm between bed centres), trickle irrigated and fertilised, pest and disease treatments applied as required.
Trial Design	Planted in randomised complete block design with 4 blocks and 10 plants per plot, significance tested using F and t tests ignoring block effects.
Measurements	From twenty plants or fruit as five individual plants or harvested fruit randomly sampled per cultivar per block.
RHS Chart - edition	2007

Origin and Breeding

Controlled pollination: DPI Rubygem X '2004-290' of selected parents were evaluated at Maroochy, Redlands and Bundaberg Research Station with selection within and among families for the suite of characteristics. Runners from approximately 492 clones selected from among the seedlings were evaluated for the same set of characteristics in duplicate plots at Maroochy Station to produce approximately 97 selected clones in 2007, and 8 selected clones in 2008. 'Redgem' (2006-215) was selected from among the 8 clones and further evaluated in 2009 in small observation plots on several strawberry farms in Queensland and ACT using runners grown at Stanthorpe from virus indexed plants. Work was directed by M. E. Herrington and L. Woolcock. Vegetative propagation has been by runners and tissue culture since first selection. Characters used in selection include flavour, early yield, fruit size, fruit shape, resistance to bruising, external and internal colour, attractiveness of fruit, tolerance to disease and rain damage, bush type, ease of harvest, truss type. Breeder: Mark E Herrington and Louella L Woolcock.

Location	Maroochy Research Station, Nambour, QLD (26°37° South, 152°57° East, elevation 29m).
Descriptor	Strawberry (new) (<i>Fragaria</i>) TG/22/10.
Period	Apr – Aug 2010
Conditions	Trial conducted at Maroochy Research Station Nambour, QLD (Apr – Aug 2010) in a non-fumigated field, with candidate 'Suncoast Delight' (2006-475) runners from container-grown runners produced at Maroochy Research Station, and comparator ('Festival') runners from commercial sources in QLD runner growing district (Stanthorpe), black polythene mulch, double rows on beds (24cm inter-row, 35 cm intra-row and 140cm between bed centres), trickle irrigated and fertilised, pest and disease treatments applied as required.
Trial Design	Planted in randomised complete block design with 4 blocks and 10 plants per plot, significance tested using F and t tests ignoring block effects.
Measurements	From twenty plants or fruit as five individual plants or harvested fruit randomly sampled per cultivar per block.
RHS Chart - edition	2007

Origin and Breeding

Controlled pollination: 'FL01-133' X 'FL02-058' approximately 13450 seedlings from controlled pollinations of selected parents, and from a variety of sources, were evaluated at Maroochy, Redlands and Bundaberg Research Stations with selection within and among families for the suite of characteristics (below). Runners from approx 490 clones selected from among seedlings were evaluated for the same set of characteristics in duplicate plots at Maroochy Research Station to produce approx 97 selected clones in 2007, and 8 selected clones in 2008. 'Suncoast Delight' (2006-475) was selected from the 8 clones and further evaluated in 2009 on Maroochy Research Station and in observation plots on commercial strawberry farms in QLD from container-grown runners produced at Maroochy Research station. Work was directed by M. E. Herrington and L. Woolcock. Vegetative propagation has been by runners since first selection. Characters used in selection: yield, yield distribution, fruit size, fruit shape, external and internal colour, resistance to bruising and abrasion, shelf-life,

flavour, attractiveness of fruit, tolerance to disease. Breeder: Mark E Herrington and Louella L Woolcock.

Details of Application

Application Number	2009/173
Variety Name	'DrisStrawSix'
Genus Species	<i>Fragaria x ananassa</i>
Common Name	Strawberry
Synonym	Nil
Accepted Date	25 Aug 2009
Applicant	Driscoll Strawberry Associates, Inc, Watsonville, CA
Agent	Phillips Ormonde & Fitzpatrick, Melbourne, VIC
Qualified Person	Margaret Zorin

Details of Comparative Trial

Overseas Testing	US Patent & Trademark Office (USPTO)
Authority	
Overseas Data	PP20,701
Reference Number	
Location	Hillsborough, Florida USA, verified Birkdale Qld Australia
Descriptor	Strawberry (<i>Fragaria</i>) TG/22/9
Period	2002-2008
Conditions	Grown under full sunlight in commercial strawberry winter production conditions in Hillsborough, Florida USA.
Trial Design	Plants were asexually propagated in a nursery and grown in Florida each year for 5 years prior to description.
Measurements	The following description of 'DrisStrawSix' is based on observations and measurements in accordance with UPOV guidelines and terminology. The colour terminology follows The Royal Horticultural Society Colour Chart, London (R.H.S.)
RHS Chart - edition	2001

Origin and Breeding

Controlled pollination: The new variety 'DrisStrawSix' was discovered as a seedling in 2002 and originated from cross-pollination of two breeding lines, the female parent '74G14' (unpatented) and the pollen parent '6F-158' (unpatented). The original seedling was asexually propagated and underwent further testing for 5 years in Hillsborough, Florida USA. The distinctive characteristics have been retained through successive asexual propagations. Breeders: Kristie L Gilford; Phillip J. Stewart; and Esther J. Pullen. All are employees of Driscoll Strawberry Associates Inc. Watsonville CA USA.

Common Name	Strawberry
Synonym	LouLou Belle
Accepted Date	30 Sep 2010
Applicant	The State of Queensland acting through the Department of Employment, Economic Development and Innovation Brisbane, QLD and Horticulture Australia Limited, Sydney, NSW
Agent	N/A
Qualified Person	Mark Herrington

Details of Comparative Trial

Location	Maroochy Research Station, Nambour, QLD (26°37' South, 152°57' East, elevation 29m).
Descriptor	Strawberry (new) (<i>Fragaria</i>) TG/22/10.
Period	Apr – Aug 2010.
Conditions	Trial conducted at Maroochy Research Station Nambour, QLD (Apr – Aug 2010) in a non-fumigated field, runners from commercial sources in QLD runner growing district (Stanthorpe), black polythene mulch, double rows on beds (24cm inter-row, 35 cm intra-row and 140cm between bed centres), trickle irrigated and fertilised, pest and disease treatments applied as required.
Trial Design	Planted in randomised complete block design with 4 blocks and 10 plants per plot, significance tested using F and t tests ignoring block effects.
Measurements	From twenty plants or fruit as five individual plants or harvested fruit randomly sampled per cultivar per block.
RHS Chart - edition	2007

Origin and Breeding

Controlled pollination: 2004258'X'QHI 'Harmony' approximately 13450 seedlings from controlled pollinations of selected parents were evaluated at Maroochy, Redlands and Bundaberg Research Station with selection within and among families for the suite of characteristics. Initial selection '2006-019' was made between May and Sep 2006 at Maroochy Research Station, Nambour QLD. Runners from approximately 492 clones selected from among the seedlings were evaluated for the same set of characteristics in duplicate plots at Maroochy Station to produce approximately 97 selected clones in 2007, and 8 selected clones in 2008. 'Aussiegem' (2006-019) was selected from among the 8 clones and further evaluated in 2009 in small observation plots on several strawberry farms in QLD and ACT using runners grown at Stanthorpe from virus indexed plants. Work was directed by M. E. Herrington and L. Woolcock. Vegetative propagation has been by runners and tissue culture since first selection. Characters used in selection include, flavour, early yield, fruit size, fruit shape, resistance to bruising, external and internal colour, attractiveness of fruit, tolerance to disease and rain damage, bush type, ease of harvest, truss type. Breeder: Mark E Herrington and Louella L Woolcock.

Description: **Mark Herrington** and **Sam Price**, Maroochy Research Station QLD.

Details of Application

Application Number	2009/187
Variety Name	'Q241'
Genus Species	<i>Saccharum</i> hybrid
Common Name	Sugarcane
Synonym	Nil
Accepted Date	04 Sep 2009
Applicant	BSES Limited, Indooroopilly, QLD.
Agent	N/A
Qualified Person	George Piperidis

Details of Comparative Trial

Location	71378 Bruce Highway Meringa QLD
Descriptor	Sugarcane (<i>Saccharum</i>) TG/186/2
Period	Planted 19 August 2009; descriptions taken 28-29 July 2010
Conditions	Clones were propagated from vegetative cuttings and grown under field conditions. Trial site was strategically tilled and spray fallowed December 2008 and planted with a cover crop of soybean legumes over the wet season. Land preparation was by zonal tillage only, with one rotary hoeing and two rippings in the plant zone. Planting material was generally good. Soil tilth and moisture were good at planting. Soil type: clay loam, Edmonton series. Watering regime: rainfed. Chemicals: the fungicide Shirtan was applied at approximately 60ml per hectare at planting. The herbicide Diurex(4kg/ha)was applied 23/12/2009 to control weeds. The insecticide Talstar (150mL/ha) was applied to control wireworms. Fertiliser: GF 505(200 kg/ha) was applied at planting and side-dressed at 20/11/2009. Total nutrients: Nitrogen 116 kg/ha; Potassium 74 kg/ha.
Trial Design	Randomised Complete Block Design with three replicates. Plots were single row by 10m, with 1.5m between rows.
Measurements	Taken from up to 10 stalks sampled randomly per plot.
RHS Chart - edition	2001

Origin and Breeding

Controlled pollination: 'Q138'X'SP72-4728 seed was collected from the pollinated female inflorescences and stored for germination in 1992. The variety has since been evaluated and selected by BSES in yield trials on the Meringa Sugar Experiment Station and sites within the sugarcane growing area in the Northern region. Standard commercial varieties were also included in the trials for comparative purposes. After an initial seedling stage (using seed from the cross), all subsequent stages have involved vegetative propagation. The variety has been grown through three stages of selection and was found to be uniform and stable. Breeder: BSES Limited.

Description: **George Piperidis** BSES Limited, Mackay, QLD.

Details of Application

Application Number	1996/212
Variety Name	'FAIRVIEW FLAME'
Genus Species	<i>Acer rubrum</i>
Common Name	Swamp Maple
Synonym	
Accepted Date	25 Nov 1996
Applicant	A McGill & Son, Oregon, USA
Agent	Fleming's Nurseries Pty Ltd, Monbulk, VIC
Qualified Person	Peter Todd

Details of Comparative Trial

Location	Monbulk, VIC
Descriptor	Maple (Acer) PBR ACER
Period	1997 – present
Conditions	Plants were growing vegetatively. All trees healthy and showing no obvious signs of disease .
Trial Design	Trees of the candidate and comparators were randomly planted in 2 rows.
Measurements	From all trial trees.
RHS Chart - edition	1986

Origin and Breeding

Spontaneous mutation: *Acer rubrum*. This cultivar originates from a spontaneous mutation that was subsequently propagated. All future generations have proven to be distinct uniform and stable. Breeder: A. McGill & Son, Oregon, USA.

Description: **Peter Todd**, Monbulk, VIC.

Details of Application

Application Number	2003/093
Variety Name	'Oakville Highlight'
Genus Species	<i>Liquidambar styraciflua</i>
Common Name	Sweet Gum
Synonym	
Accepted Date	09 May 2003
Applicant	Vic John Ciccolella
Agent	Fleming's Nurseries Pty Ltd, Monbulk, VIC
Qualified Person	Peter Todd

Details of Comparative Trial

Location	Monbulk, VIC
Descriptor	Liquidambar (<i>Liquidambar</i>) PBR LIQU
Period	2003 – to date
RHS Chart - edition	1986

Origin and Breeding

Seedling selection: *Liquidambar styraciflua*. The seedling was selected in 1988 at Oakville, NSW having displayed a very distinct upright habit, with side branches close to main stem. The leaves are also dark green and held flat with a different lobe (cut deeper than majority of Liquidambers). The selected seedling was then grown for two years before being planted in the applicant's arboretum in 1990. Since that time the tree has maintained all its distinguishing, desirable attributes.

Description: **Peter Todd**, Monbuk, VIC

Details of Application

Application Number	2005/355
Variety Name	'Royal Honey'
Genus Species	<i>Citrus reticulata</i> x <i>Citrus sinensis</i>
Common Name	Tangor
Synonym	nil
Accepted Date	24 Mar 2006
Applicant	Allen Ward & Susan Ruth Jenkin, Mundubbera, QLD
Agent	n/a
Qualified Person	John Owen-Turner

Details of Comparative Trial

Location	Rosewood Orchard, North Burnett Regional Council, (Eidsvold), QLD.
Descriptor	Mandarin (<i>Citrus</i>) TG/201/1
Period	2006 – 2010
Conditions	Rosewood Orchard is situated in the prime mandarin growing area of Central Burnett, QLD. The trial site is in the centre of a block of the candidate variety. Trial trees received standard orchard treatments of nutrition, pest & disease control and irrigation which is standard under tree sprinkler irrigation. A bulked sample from 10 fruit from each tree, was tested for Brix/Acid, for each treatment.
Trial Design	Single tree plot blocks. 4 treatments x 4 blocks.
Measurements	Early maturity for this group of mandarins. This group, in Queensland, are referred to as mid-season. 'Royal Honey' is among the very few of the earliest.
RHS Chart - edition	2007 edition.

Origin and Breeding

Open pollination: Putative progeny of maternal parent 'Ellendale Tangor' and 'Murcott'. Observed as a chance seedling within the planting of one of the parents. Subsequently vegetatively propagated from the seedling. Breeder: Sue Jenkin, Mundubbera, QLD

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Description: **John Owen-Turner**, Burrum Heads, QLD

Details of Application

Application Number	2009/285
Variety Name	'Bees Pink'
Genus Species	<i>Armeria x pseudarmeria</i>
Common Name	Thrift
Synonym	Nil
Accepted Date	22 Dec 2009
Applicant	Plant Growers Australia, Wonga Park, VIC
Agent	Plants Management Australia Pty. Ltd., Dodges Ferry, TAS
Qualified Person	Steve Eggleton

Details of Comparative Trial

Location	Wonga Park, VIC
Descriptor	PBR General Descriptor
Period	Jan 2010 to Oct 2010
Conditions	Trial conducted in the open, plants propagated from cuttings during Jan 2010, transferred from plugs to 140mm pots in Apr 2010. Pots filled with soilless, pinebark based mix with controlled release fertilizers. Appropriate pest and disease treatments were applied as required.
Trial Design	Twelve pots of each variety in a completely randomised design.
Measurements	From ten plants randomly selected.
RHS Chart - edition	1995

Origin and Breeding

Controlled pollination: 'Bees Ruby' x 'Joystick Lilac Shades'. Pollination occurred in Wonga Park, VIC, Australia in Oct 2002. The F1 generation was raised in Feb 2003 and grown to flowering maturity in Sep 2003. At this stage several selections (never commercialised) from this F1 generation were self pollinated and the seed sown in Feb 2004. From these F2 seedlings a selection was made when the plants had grown to flowering stage in a 140mm container (Sep 2004). Selection Criteria: Peduncle rigidity strong, inflorescence height medium and flower colour mid pink. The selection was then propagated via cuttings to establish trial stock plants and the original plant was grown on for a further year to review its selection characteristics. Propagation continues via cuttings and tissue culture. These initial and all subsequent generations have all been found to be uniform and stable.

Description: **Steve Eggleton**, Plant Growers Australia. Wonga Park, VIC.

Details of Application

Application Number	2009/287
Variety Name	'Bees Salmon'
Genus Species	<i>Armeria x pseudarmeria</i>
Common Name	Thrift
Synonym	Nil
Accepted Date	22 Dec 2009
Applicant	Plant Growers Australia, Wonga Park, VIC
Agent	Plants Management Australia Pty. Ltd., Dodge Ferry, TAS
Qualified Person	Steve Eggleton

Details of Comparative Trial

Location	Wonga Park, VIC
Descriptor	General Descriptor (for plant varieties with no descriptor available) PBR GEN DES
Period	Jan 2010 – Oct 2010
Conditions	Trial conducted in the open, plants propagated from cuttings during Jan 2010, transferred from plugs to 140mm pots in Apr 2010. Pots filled with soilless, pinebark based mix with controlled release fertilizers. Appropriate pest and disease treatments were applied as required.
Trial Design	Twelve pots of each variety in a completely randomised design.
Measurements	From ten plants randomly selected.
RHS Chart - edition	1995

Origin and Breeding

Controlled Pollination: 'Bees Ruby' x 'Joystick Red'. Controlled cross occurred in Wonga Park, VIC, Australia in Oct 2002. The F1 generation was raised in Feb 2003 and grown to flowering maturity in Sep 2003. At this stage several selections (never commercialised) from this F1 generation, were self pollinated and the seed sown in Feb 2004. From these F2 seedlings a selection was made when the plants had grown to flowering maturity in 140mm containers (Sep 2004) Selection criteria: Peduncle: rigidity strong; Inflorescence: height medium; and Flower: colour salmon. The selection was then propagated via cuttings to establish trial stock plants and the original plant was grown on for a further year to review its selection characteristics. Propagation continues via cuttings and tissue culture. These initial and all subsequent generations have all been found to be uniform and stable.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Leaf	presence of variegation	absent
Inflorescence	diameter	large
Inflorescence	height	medium
Inflorescence	shape	globular
Peduncle	habit	erect
Peduncle	rigidity	strong to very strong

Most Similar Varieties of Common Knowledge identified (VCK)

Name	Comments
'Bees Ruby'	
'Bees Lilac'	
'Bees Pink'	

Varieties of Common Knowledge identified and subsequently excluded

Variety	Distinguishing Characteristics	State of Expression in Candidate Variety	State of Expression in Comparator Variety
'Ballerina Red'	inflorescence shape	globular	flattened
'Joystick Red'	peduncle rigidity	strong	weak

Variety Description and Distinctness - Characteristics which distinguish the candidate from one or more of the comparators are marked with a tick.

1990/091	Rosa	<i>Hybrida</i>		Noatraum

Corrigenda

BROMUS

Bromus coloratus

‘Exceltas’

Application No: 2006/062

The name of the second applicant **University of Tasmania** was omitted from the following publications:

Acceptance published in PVJ 19.2

Detailed description published in PVJ 21.2

Grant published in PVJ 22.2

Our record has been corrected and the name of the second applicant has been added to the PBR register. The correct names of the applicants should be:

The Crown in Right of the State of Tasmania through the Department of Primary Industries, Water and Environment and University of Tasmania.

CHICKPEA

Cicer arietinum

‘PBA HatTrick’

Application No: 2009/185

The character Days to flower (days) is removed from claim for distinctness in the comparative table of the description for this variety in PVJ 22.4 because of lack of stability for this character.

‘PBA Slasher’

Application No: 2009/186

The characters Plant width (cm), pod length (mm) and time to flower (days) are removed from claim for distinctness in the comparative table of the description for this variety in PVJ 22.4 because of lack of stability for this character.

‘PBA Pistol’

Application No: 2009/301

The characters pod length (mm) and pod breadth (mm) are removed from claim for distinctness in the comparative table of the description for this variety in PVJ 22.4 because of lack of stability for this character.

SPINY HEADED MAT RUSH

*Lomandra longifolia***‘LI364’**

In the Statistical table published in PVJ22.2, the difference of Leaf Length (mm) between ‘LI364’ and ‘LI164’ was inadvertently published as non-significant (ns). Where as the difference should be significant at $P \leq 0.01$. The corrected table is published below:

Statistical Table

Organ/Plant Part: Context	‘LI364’	‘LI164’	‘LI264’	‘LM300’
<input checked="" type="checkbox"/> Leaf: length (mm)				
Mean	755.00	572.50	600.50	590.50
Std. Deviation	114.10	82.00	137.60	56.10
LSD/sig	113.35	$P \leq 0.01$	$P \leq 0.01$	$P \leq 0.01$

WHEAT

*Triticum aestivum***‘Craw 128’**

Application No. 2008/326

Correction to the application number published in Journal Volume 23 Issue 1.
Application number was incorrectly published as 2008/236.

GAZANIA

*Gazania hybrid***‘SUNABOUT’**

Application No. 1996/266

Correction to the application number published in Journal Volume 22 Issue 4.
Application number was incorrectly published as 1999/266

Part 3 Appendices

The appendices to *Plant Varieties Journal* (**Vol. 23 Issue 3**) are listed below:

- [Appendix 3 - Index of Accredited Consultant 'Qualified Persons'](#)
- [Appendix 4 - Index of Accredited Non-Consultant 'Qualified Persons'](#)
- [Appendix 5 - Addresses of UPOV and Member States](#)
- [Appendix 6 - Centralised Testing Centres](#)
- [Appendix 7 - List of Plant Classes for Denomination Purposes](#)
- [Appendix 8 - Register of Plant Varieties](#)

APPENDIX 1

FEES

Two fee structures exist as a result of the transition from Plant Variety Rights to Plant Breeders Rights. For new applications (those lodged on or after 11 November 1994) the PBR fees apply. For older applications lodged before 11 November 1994 and not finally disposed of (Granted, Withdrawn, Refused etc.) the PVR fees in force at the time apply.

The Treasurer has determined that all statutory fees under PBR regulations will be exempted from GST.

Payment of Fees

All cheques for fees should be made payable and sent to:

Collector of Public Monies
C/-Plant Breeders Rights Office, IP Australia
GPO Box 200
Woden, ACT 2606

The **application fee** (\$300) must accompany the application at the time of lodgement.

Consequences of not paying fees when due

Application fee

Should an application not be accompanied by the prescribed application fee the application will be deemed to be 'non-valid' and neither assigned an application number nor examined for acceptance pending the payment of the fee.

Examination fee

Non-payment of the examination fee of an application will automatically result, at the end of 12 months from the date of acceptance¹, in a refusal of the application. The consequences of refusal are the same as for applications deemed to be inactive (see 'inactive applications' below).

Consideration of a request for an extension of the period of provisional protection from the initial 12-month period may require the prior payment of the examination fee.

Certificate fee

Following the successful completion of the examination, including the public notice period, the applicant will be required and invoiced to pay the certification fee. Payment of the certification fee is a prerequisite to granting PBR and issuing the official certificate by the PBR office. Failure to pay the fee may result in a refusal to grant PBR.

Annual fee

Should an annual renewal fee not be paid within 30 days after the due date, the grant of PBR will be revoked under Section 50 of the PBR Act. To assist grantees, the PBR office will invoice grantees or their Australian agents for renewal fees.

Inactive applications

An application will be deemed inactive if, after 24 months of provisional protection (or 12 months in the case of non-payment of the examination fee) the PBR Office has not received a completed application or has not been advised to proceed with the examination or an extension of provisional protection has not been requested or not granted or a certificate fee has not been paid. Inactive applications will be examined and, should they not fully comply with Section 44 of the PBR Act 1994, they will be refused. As a result provisional protection will lapse, priority claims on that variety will be

¹ The time limit to pay examination fees on imported varieties can be deferred for a maximum of 12 months after the variety has been released from quarantine. Contact the PBR Office for further details.

lost and should the variety have been sold, it will be ineligible for plant breeders rights on reapplication. Continued use of labels or any other means to falsely imply that a variety is protected after the application has been refused is an offence under Section 75 of the Act.

FEES				
Basic Fees	Schedule			
	A	B	C	D
	\$			
Application	300	300	400	300
Examination - per application	1400	1200	1400	800
Certificate	300	300	250	300
Total Basic Fees	2000	1800	2050	1400
Annual Renewal - all applications	300			
Schedule				
A	Single applications and applications based on an official overseas test reports.			
B	Applicable when two or more Part 2 Applications are lodged simultaneously and the varieties are of the same genus and the examinations can be completed at one location at the same time.			
C	Applications lodged under PVR (prior to 10 th Nov 1994)			
D	Applicable to 5 or more applications examined at an Accredited Centralised Testing Centre			
Other Fees				
Variation to application(s) - per hour or part thereof				75
Change of Assignment - per application				100
Copy of an application (Part1 and/or Part2) , an objection or a detailed description				50
Copy of an entry in the Register				50
Lodging an objection				100
Annual subscription to Plant Varieties Journal				40
Back issues of Plant Varieties Journal				14
Administration - Other work relevant to PBR - per hour or part thereof				75
Application for declaration of essential derivation				800
Application for (a) revocation of a PBR				500
(b) revocation of a declaration of essential derivation				500
Compulsory licence				500
Request under subsection 19(11) for exemption from public access - varieties with no direct use as a consumer				100

APPENDIX 3 - INDEX OF ACCREDITED CONSULTANT 'QUALIFIED PERSONS'

The following persons have been accredited by the PBR office based on information provided by these persons. From the information provided by the applicants, the PBR office believes that these people can fulfil the role of 'qualified person' in the application for plant breeder's rights. Neither accreditation nor publication of a name in the list of persons is an implicit recommendation of the person so listed. The PBR office cannot be held liable for damages that may arise from the omission or inclusion of a person's name in the list nor does it assume any responsibility for losses or damages arising from agreements entered into between applicants and any person in the list of accredited persons. Qualified persons charge a fee for services rendered.

A guide to the use of the index of consultants:

- locate in the left column of Table 1 the plant group for which you are applying;
- listed in the right column are the names of accredited qualified persons from which you can choose a consultant;
- in Table 2 find that consultant's name, telephone number and area in which they are willing to consult (they may consult outside the nominated area);
- using the "Nomination of Qualified Person" form as a guide, agree provisionally on the scope and terms of the consultancy; complete the form and attach it to Part 1 of the application form;
- when you are notified that your nomination of a consultant qualified person is acceptable in the letter of acceptance of your application for PBR you should again consult the qualified person when planning the rest of the application for PBR.

TABLE 1

PLANT GROUP/SPECIES/FAMILY	CONSULTANT'S NAME (TELEPHONE AND AREA IN TABLE 2)
Actinidia	Lye, Colin Paananen, Ian Richards, Graeme
Agapanthus	Paananen, Ian
Almonds	Granger, Andrew Swinburn, Garth
Alstroemeria	Paananen, Ian
Ajuga	Paananen, Ian
Apple	Buchanan, Peter Cramond, Gregory Darmody, Liz Engel, Richard Fleming, Graham Langford, Garry Mackay, Alastair Malone, Michael Mitchell, Leslie Portman, Anthony Scholefield, Peter Tancred, Stephen Valentine, Bruce

Anigozanthos	Paananen, Ian Kirby, Greg Smith, Daniel
Anthurium	Paananen, Ian
Aroid	Harrison, Peter
Avocado	Lye, Colin Edwards, Arthur MacGregor, Alison Owen-Turner, John Parr, Wayne Swinburn, Garth Whiley, Tony
Azalea	Barrett, Mike Hempel, Maciej Paananen, Ian
Barley (Common)	Collins, David Downes, Ross Khan, Akram Platz, Greg Rhodes, Phil Rogers, Clinton Saunders, James
Berry Fruit	Darmody, Liz Fleming, Graham Greer, Neil Scholefield, Peter Zorin, Margaret
Blackberry (<i>Rubus</i> sp)	Paananen, Ian
Blandfordia	Treverrow, Florence
Blueberry	Paananen, Ian Scalzo, Jessica Zorin, Margaret
Bougainvillea	Iredell, Janet Willa Prince, John
Brachyscome	Paananen, Ian

Brassica	Bannan, Nathaniel Chequer, Robert Cooper, Kath Downes, Ross Easton, Andrew Fennell, John Gororo, Nelson Johnston, Evan Kadkol, Gururaj Laker, Richard Light, Kate McMichael, Prue O'Connell Peter Rhodes, Phil Rudolph, Paul Sanders, Milton Saunders, James Scholefield, Peter Mouwen, Heidi Watson, Brigid Zadow, Diane
Brunia	Dunstone, Bob
Buddleia	Robb, John Paananen, Ian
Buffalo Grass	Paananen, Ian
Calibrachoa	Paananen, Ian
Callistemon	Parsons, Rodney
Camellia	Paananen, Ian Robb, John
Cannabis (low THC varieties only and subject to holding a current licence from the appropriate authority)	Bolton, Keith Calabria, Patrick
Carnation/Dianthus	Paananen, Ian

Cereals	Bullen, Kenneth Collins, David Cook, Bruce Cooper, Kath Downes, Ross Fennell, John Hare, Raymond Harrison, Peter Henry, Robert J Johnston, Evan Khan, Akram Mitchell, Leslie Moore, Stephen Oates, John Platz, Greg Porter, Richard Poulsen, David Rhodes, Phil Roake, Jeremy Rogers, Clinton Rose, John Saunders, James Scattini, Walter John Siedel, John Watson, Brigid Wilson, Frances
Cherry	Cramond, Gregory Darmody, Liz Fleming, Graham Granger, Andrew Mackay, Alastair Mitchell, Leslie Pumpa, Lucy Scholefield, Peter
Chickpeas	Downes, Ross Collins, David Goulden, David Rhodes, Phil Saunders, James
Chrysanthemum	Paananen, Ian
Citrus	Calabria, Patrick Chalmers, Yasmin Michelle Edwards, Arthur Lee, Slade MacGregor, Alison Mitchell, Leslie Owen-Turner, John Parr, Wayne Scholefield, Peter Swinburn, Garth Sykes, Stephen Topp, Bruce
Clivia	Smith, Kenneth

Clover	Bannan, Nathaniel Downes, Ross James, Jennifer Johnston, Evan Lake, Andrew Miller, Jeff Mitchell, Leslie Nichols, Phillip Porter, Richard Rhodes, Phil Saunders, James Watson, Brigid
Cotton	Khan, Akram Leske, Richard
Cucurbits	Herrington, Mark McMichael, Prue O'Connell Peter Rhodes, Phil Scholefield, Peter Sykes, Stephen
Desmanthus	Brennan, Paul
Dianella	Paananen, Ian
Dogwood	Darmody, Liz Fleming, Graham
Echinacea	Paananen, Ian
Eremophila	Parsons, Rodney
Eucalyptus	Paananen, Ian
Euphorbia	Paananen, Ian
Feijoa	Parr, Wayne Scholefield, Peter
Fibre Crops	Gillespie, David Khan, Akram
Fig	Darmody, Liz Fleming, Graham Parr, Wayne
Flower Bulbs	Verdegaal, John
Forage Brassicas	Goulden, David Rhodes, Phil Saunders, James

Forage Grasses	Bannan, Nathaniel Downes, Ross Fennell, John Harrison, Peter Johnston, Evan Kirby, Greg Mitchell, Leslie Rhodes, Phil Smith, Kevin Watson, Brigid
Forage Legumes	Downes, Ross Fennell, John Foster, Kevin Harrison, Peter Hill, Jeff James, Jennifer Lake, Andrew Miller, Jeff Porter, Richard Rhodes, Phil Saunders, James Siedel, John
Fruit	Brown, Gordon Cramond, Gregory Darmody, Liz Delaporte, Kate Fleming, Graham Gillespie, David Granger, Andrew Kennedy, Peter Lenoir, Roland McCarthy, Alec Mitchell, Leslie Paananen, Ian Parr, Wayne Portman, Sian Pumpa, Lucy Schapel, Amanda Scholefield, Peter
Fuchsia	Paananen, Ian
Gerbera	Paananen, Ian
Ginger	Smith, Mike Whiley, Tony

List of Addresses of Plant Variety Protection Offices in UPOV Member States

Status of Ratification in UPOV member States is available from UPOV website.

APPENDIX 6

CENTRALISED TESTING CENTRES

Under Plant Breeder's Rights Regulations introduced in 1996, establishments may be officially authorised by the PBR office to conduct test growings. An authorised establishment will be known as Centralised Test Centre (CTC).

Usually, the implementation of PBR in Australia relies on a 'breeder testing' system in which the applicant, in conjunction with a nominated Qualified Person (QP), establishes, conducts and reports a comparative trial. More often than not, trials by several breeders are being conducted concurrently at different sites. This makes valid comparisons difficult and often results in costly duplication.

While the current system is and will remain satisfactory, other optional testing methods are now available which will add flexibility to the PBR process.

Centralised Testing is one such optional system. It is based upon the authorisation of private or public establishments to test one or more genera of plants. Applicants can choose to submit their varieties for testing by a CTC or continue to do the test themselves. Remember, using a CTC to test your variety is voluntary.

The use of CTCs recognises the advantages of testing a larger number of candidate varieties (with a larger number of comparators) in a single comprehensive trial. Not only is there an increase in scientific rigour but also there are substantial economies of scale and commensurate cost savings. A CTC will establish, conduct and report each trial on behalf of the applicant.

The PBR office has amended its fees so that cost savings can be passed to applicants who choose to test their varieties in a CTC. Accordingly, when 5 or more candidate varieties of the same genus are tested simultaneously, each will qualify for the CTC examination fee of \$800. This is a saving of nearly 40% over the normal fee of \$1400.

Trials containing less than 5 candidate varieties capable of being examined simultaneously will not be considered as Centralised test trials regardless of the authorisation of the facility. Candidate varieties in non-qualifying small trials will not qualify for CTC reduction of examination fees.

Establishments wishing to be authorised as a CTC may apply in writing to the PBR office outlining their claims against the selection criteria. Initially, only one CTC will be authorised for each genus. Exemptions to this rule can be claimed due to special circumstances, industry needs and quarantine regulations. Authorisations will be reviewed periodically.

Authorisation of CTCs is not aimed solely at large research institutions. Smaller establishments with appropriate facilities and experience can also apply for CTC status. There is no cost for authorisation as a CTC.

APPLICATIONS FOR AUTHORISATION AS A 'CENTRALISED TESTING CENTRE'

Establishments interested in gaining authorisation as a Centralised Testing Centre should apply in writing addressing each of the Conditions and Selection Criteria outlined below.

Conditions and Selection Criteria

To be authorised as a CTC, the following conditions and criteria will need to be met:

Appropriate facilities

While in part determined by the genera being tested, all establishments must have facilities that allow the conduct and completion of moderate to large-scale scientific experiments without undue environmental influences. Again dependent on genera, a range of complementary testing and propagation facilities (e.g. outdoor, glasshouse, shadehouse, tissue culture stations) is desirable.

Experienced staff

Adequately trained staff, and access to appropriately accredited Qualified Persons, with a history of successful PVR/PBR applications will need to be available for all stages of the trial from planting to the presentation of the

analysed data. These staff will require the authority to ensure timely maintenance of the trial. Where provided by the PBR office, the protocol and technical guidelines for the conduct of the trial must be followed.

Substantial industry support

Normally the establishment will be recognised by a state or national industry society or association. This may include/be replaced by a written commitment from major nurseries or other applicants, who have a history of regularly making applications for PBR in Australia, to use the facility.

Capability for long-term storage of genetic material

Depending upon the genus, a CTC must be in a position to make a long-term commitment to collect and maintain, at minimal cost, genetic resources of vegetatively propagated species as a source of comparative varieties. Applicants indicating a willingness to act as a national genetic resource centre in perpetuity will be favoured.

Contract testing for 3rd Parties

Unless exempted in writing by the PBR office operators of a CTC must be prepared to test varieties submitted by a third party.

Relationship between CTC and 3rd Parties

A formal arrangement between the CTC and any third party including fees for service will need to be prepared and signed before the commencement of the trial. It will include among other things: how the plant material will be delivered (e.g. date, stage of development plant, condition etc); allow the applicant and/or their agent and QP access to the site during normal working hours; and release the use of all trial data to the owners of the varieties included in the trial.

One trial at a time

Unless exempted in writing by the PBR office, all candidates and comparators should be tested in a single trial.

One CTC per genus

Normally only one CTC will be authorised to test a genus. Special circumstances may exist (environmental factors, quarantine etc) to allow more than one CTC per genus, though a special case will need to be made to the PBR office. More than one CTC maybe allowed for roses.

One CTC may be authorised to test more than one genus.
Authorisations for each genus will be reviewed periodically.

Authorised Centralised Test Centres (CTCs)

Following publication of applications for accreditation and ensuing public comment, the following organisations/individuals are authorised to act as CTCs. Any special conditions are also listed.

Name	Location	Approved Genera	Facilities	Name of QP	Date of accreditation
Agriculture Victoria, National Potato Improvement Centre	Toolangi, VIC	Potato	Outdoor, field, greenhouse, tissue culture laboratory	R Kirkham	31/3/97
Bureau of Sugar Experiment Stations	Cairns, Tully, Ingham, Ayr, Mackay, Bundaberg, Brisbane QLD	<i>Saccharum</i>	Field, glasshouse, tissue culture, pathology	G Piperidis	30/6/97
Ag-Seed Research	Horsham and other sites	Canola	Field, glasshouse, shadehouse, laboratory and biochemical analyses	P Rudolph	30/6/97

Woden, ACT 2606
Fax (02) 6283 7999

Closing date for comment: 31 December 2010.

APPENDIX 7

List of Classes for Variety Denomination Purposes

UPOV Variety Denomination Classes: (UPOV/INF/12/1: ANNEX I)

A Variety Denomination Should not be Used More than Once in the Same Class

For the purposes of providing guidance on the third and fourth sentences of paragraph 2 of Article 20 of the 1991 Act and of Article 13 of the 1978 Act and the 1961 Convention, variety denomination classes have been developed. A variety denomination should not be used more than once in the same class. The classes have been developed such that the botanical taxa within the same class are considered to be closely related and/or liable to mislead or to cause confusion concerning the identity of the variety.

The variety denomination classes are as follows:

(a) General Rule (one genus / one class): for genera and species not covered by the List of Classes in this Annex, a genus is considered to be a class;

(b) Exceptions to the General Rule (list of classes):

(i) classes within a genus: List of classes in this Annex: Part I;

(ii) classes encompassing more than one genus: List of classes in this Annex:

Part II.

LIST OF CLASSES

Part I*Classes within a genus*

	<u>Botanical names</u>	<u>UPOV codes</u>
Class 1.1	Brassica oleracea	BRASS_OLE
Class 1.2	Brassica other than Brassica oleracea	other than BRASS_OLE
Class 2.1	Beta vulgaris L. var. alba DC., Beta vulgaris L. var. altissima	BETAA_VUL_GVA; BETAA_VUL_GVS
Class 2.2	Beta vulgaris ssp. vulgaris var. conditiva Alef. (syn.: B. vulgaris L. var. rubra L.), B. vulgaris L. var. cicla L., B. vulgaris L. ssp. vulgaris var. vulgaris	BETAA_VUL_GVC; BETAA_VUL_GVF
Class 2.3	Beta other than classes 2.1 and 2.2.	other than classes 2.1 and 2.2
Class 3.1	Cucumis sativus	CUCUM_SAT
Class 3.2	Cucumis melo	CUCUM_MEL
Class 3.3	Cucumis other than classes 3.1 and 3.2	other than classes 3.1 and 3.2
Class 4.1	Solanum tuberosum L.	SOLAN_TUB
Class 4.2	Solanum other than class 4.1	other than class 4.1

APPENDIX 8**REGISTER OF PLANT VARIETIES**

Register of Plant Varieties contains the legal description of the varieties granted Plant Breeder's Rights. A person may inspect the Register at any reasonable time. Following are the contact details for Registers (1988-2000) kept in each state and territories*
