Part 1 (General Information)

Part 1 of ***Plant Varieties Journal*** provides the link with the General Information about the Plant Breeder's Rights Scheme, the procedures for objections and revocations, UPOV developments, important changes, official notices etc. The General Information pages of ***Plant Varieties Journal*** **(Vol. 28 Issue 4)** are listed below:

Interactive Variety Description System (IVDS)

For preparing the detailed description, the Plant Breeder's Rights Office (PBRO) has released the Interactive Variety Description System (IVDS) in the Internet (https://pbr-ivds.ipaustralia.plantbreeders.gov.au/pbr_ivds/) for the Qualified Persons (QPs).

In the beginning of April 2005, all QPs have officially been notified of this new system giving them access to IVDS with their individual user name and password. The main purpose of the system is to harmonise variety descriptions at both national and international level and make the PBR application process as smooth and efficient as possible.

The IVDS allows QPs to fill in descriptions on-line by accessing relevant test guidelines and selecting specific characteristics with their various states of expressions from the options provided. The IVDS incorporated all of the approved UPOV test guidelines (and some national equivalents where a UPOV test guideline is not available) into interactive forms with easy to use drop-down menus. QPs can "build" their own additional/special characteristics if they are not available in the guideline. The IVDS also accepts statistical information.

The IVDS emphasises the use of "grouping characteristics" in selecting comparator varieties. Finally, it allows QPs to lodge the completed variety descriptions on-line. There is a minimum typing involved in the process.

The PBRO anticipates that the QPs had the opportunity to familiarise themselves with IVDS during the testing and demonstration phase (August – Dec 2004) and could operate the system comfortably. There are step by step on-screen instructions with examples in each step of IVDS, which will assist the QPs to complete the process smoothly. In addition, PBRO is ready to help QPs, if they encounter any problem. Please send an e-mail to pbr@ipaustralia.gov.au if there is a problem in completing the description using IVDS.

Objections and Revocations

Objections to Applications and Requests for Revocation of a Grant or of a Declaration that a Plant Variety is Essentially Derived from Another Plant Variety

The Plant Breeder's Rights scheme is administered consistent with the model law of the *International Convention for the Protection of New Plant Varieties 1991* (UPOV 91), that is, applicants are entitled to protection, in the absence of proof to the contrary.

The Plant Breeder's Rights Office (PBRO) is not required to advocate for the views, assertions, and opinions of persons challenging an application for plant breeder's rights. Those objecting to applications, requesting revocation of a grant, or seeking a declaration that a plant variety is essentially derived from another plant variety should provide sufficient probative evidence to enable the Secretary to be satisfied of their validity of their claims. It cannot be stressed too strongly that all available evidence ought to accompany the application for objection/revocation/declaration at the outset.

Occasionally the PBRO receives comments on applications. The PBRO seeks to give effect to the processes set out in the PBR Act. The Act provides for a formal objection process, and comments are not formal objections. Where members of the public genuinely believe their commercial interests would be affected and that PBR for a proposed variety ought not to be granted, they are encouraged to use the Act's processes, eg. lodging an objection. Comments are simply informal information from the public to a governmental decision maker. The PBRO will generally not engage in further communication with the commentator regarding their comment, although the comment may be valuable in alerting the PBRO to an important matter of which it was previously unaware.

Objections to Applications

A person may make objections to applications for PBR if (i) their commercial interests would be affected adversely, and (ii) the application will not fulfil all the conditions required by the Plant Breeder's Rights Act.

Objections to applications must be lodged with the Registrar no later than six months after the date the description of the variety is published in this journal. The objector must provide evidence of adverse affect on their commercial interests and that the application should not be granted.

The Registrar of the Plant Breeder's Rights Office (PBRO) is required to give a copy of the objection to the applicant. The objection is also available to the general public on request. The applicant has the opportunity to respond to the evidence presented. The Registrar then decides whether or not the objection will be upheld and, subsequently, whether the application will be granted. The PBRO is under no obligation to enter into further dialogue regarding an objection or to communicate reasons why an objection is not upheld. If an objection is upheld it will be notified in this journal.

A payment of $100 is required on lodgement of the objection. Additional costs of $75 per hour for work undertaken in relation to the objection will be billed to the objector.

Requests for Revocation, (where an individual's interests are affected) of:

· a Grant

· a Declaration that a Plant Variety is Essentially Derived

A person may, when their interests are affected adversely, apply for the revocation of:

· a grant of PBR; or

· a declaration that a plant variety is essentially derived from another plant variety.

The person requesting revocation is required to lodge a revocation payment fee of $500. The person seeking revocation of a grant or declaration that a plant variety is essentially derived from another plant, must provide conclusive evidence of adverse affect on their interests and that the grant should be revoked.

The PBRO also accepts information regarding revocation of grants and declarations of essentially derived plant varieties. Such information must demonstrate conclusively that a grant or declaration should not have been made. All written information will be acknowledged. The PBRO is under no obligation to enter into further communication regarding information provided.

Report on Breeding Issues

A report providing greater clarification of certain ‘difficult’ and sometimes controversial plant breeding issues has been finalised by a panel of experts. The report defines ‘discovery’, ‘selective propagation’ and ‘eligible breeding’ methodologies as well as canvassing questions and answers to a range of situations. The principal areas covered are the source population and associated issues relating to ownership, location, homogeneity, parentage, boundaries, and selection from variable material. The issue of essentially derived varieties and the relationship between the first and the second breeder(s) is also explored. The final report of the expert panel is available now.

Use of Overseas Data

Overseas Testing/Data

The PBR Act allows DUS data produced in other countries (overseas data) be used in lieu of conducting a comparative trial in Australia provided certain conditions are met; relating to the filing of applications, sufficiency of the data and the likelihood that the candidate variety will express the distinctive characteristic(s) in the same way when grown locally. Briefly the overseas data could be considered where:

- The first PBR application relating to the candidate variety has been lodged overseas, and
- the variety has previously been test grown in a UPOV member country using official UPOV test guidelines and test procedures, (i.e. equivalent to a comparative trial in Australia) and
- either, all the most similar varieties of common knowledge (including those in Australia) have been included in the overseas DUS trial, or
- the new overseas variety is so clearly distinct from all the Australian varieties of common knowledge that further DUS test growing is not warranted, and
- sufficient data and descriptive information is available to publish a description of the variety in an accepted format in Plant Varieties Journal; and to satisfy the requirements of the PBR Act.

Taxa that must be trailled in Australia

It is the policy of PBR office to not accept overseas data for the following taxa due to the wide genotype by environment interactions that have been previously experienced. Varietal descriptions from overseas trials have consistently been different from those obtained from trials grown under Australian conditions. Consequently, for the following taxon a full PBR trial must be conducted in Australia:

Solanum tuberosum Potato

The Qualified Person, in consultation with the agent/applicant, and perhaps other specialists and taxonomists, will need to evaluate the overseas data, test report and photographs to see if the application does fulfil all PBR Office requirements, and then advise the agent/applicant:

- either, to submit Part 2 incorporating a description for publication, any additional data and photographs and to pay the examination fee;
- or, to conduct a DUS trial in Australia, recommending to the applicant/agent which additional varieties of common knowledge to include;

- or, submit Part 2 including additional data (information about similar varieties in Australia to show that they are clearly distinct from the candidate variety that a further DUS test growing including the similar varieties is not warranted and that the variety displays the distinctive characteristics when grown in Australia)

Please note that the PBR office does not obtain overseas DUS test reports on behalf of applicants. It is the sole responsibility of the applicants to obtain these reports directly from the relevant overseas testing authorities. Where applicants already have the report they are advised to submit a certified true copy of the report with the Part 1 application. Applicants, or those duly authorised, may certify the copy.

If you do not have the test report available at the time of Part-1 application then you are advised to submit the Part-1 application without the test report. However, you should make arrangements to procure the DUS test report directly from the relevant testing authority. When the report becomes available, a certified copy should be supplied to the QP and the PBR office.

When the trial is based on an UPOV technical guideline and test report in an official UPOV language (English, German or French), it can be lodged in support of the application. In other cases the test reports must be in English.

The applicant/agent and Qualified Person should use the overseas test report to complete Part 2 of the application, making a decision on how to proceed in view of the completeness of the information, the comparators (if any) used in the overseas DUS trial and their knowledge of similar Australian varieties that may not have been included in the overseas test report.

If a description is based on an overseas test report, Australian PBR will not be granted until after the decision to grant PBR in the country producing the DUS test is made. The final decision on the acceptability of overseas data rests with the PBR office.

PBR Infringement

Grantees should be aware of recent revisions to infringement provisions of the *Plant Breeder's Rights Act 1994* (see section 54) and related provisions of the Federal Court Rules (see order 58 rule 27) both of which can be found at the ComLaw site

On-line Database for PBR Varieties

The PBR Office has a comprehensive service for Internet users ~ a searchable database for all Australian PBR varieties, both past and present. The database features a detailed description and image for every variety granted full rights and basic information for other PBR varieties. Searches by genus, species, common name, variety name and titleholder are some of its many advantages. Varieties for which an application has been lodged but not yet accepted in the PBR scheme are not included in this database. Please browse the Plant Breeder's Rights on-line database and provide your feedback.

Cumulative Index to Plant Varieties Journal

The cumulative index to the *Plant Varieties Journal* has been updated to include variety information from all hardcopy versions up to volume 16 issue 3. After that issue the Plant Varieties Journal is only published in the electronic format and there is no need for a cumulative index, as the variety information can be easily searched in the PBR online database and also by downloading the *Plant Varieties Journal* electronically.

The final updated version of the cumulative index is available in PBR website. This document has information up to Plant Varieties Journal volume 16 issue 3. The PBR office recommends use its PBR online database to get most updated information on variety registration. The online database is updated on a weekly basis.

Applying for Plant Breeder's Rights

Applications are accepted from the original breeder of a new variety (from their employer if the breeder is an employee) or from a person who has acquired ownership from the original breeder. Overseas breeders need to appoint an agent to represent their interests in Australia. Interested parties should contact the PBR office and an accredited Qualified Person experienced in the plant species in question.

Steps in Applying for Plant Breeder's Rights

- Obtain from the breeder a signed Authorisation to act as their agent in Australia for the variety in question if your role is as the Australian agent of an overseas breeder;
- Complete Part 1 of the application form, supplying a photograph of the new variety, paying the application fee, nominating an accredited 'Qualified Person' and, if the variety is an Australian species, despatch as soon as possible a herbarium specimen;
- Engage the services of the nominated accredited 'Qualified Person' to plan and supervise the comparative growing trial;
- Conduct a comparative growing trial to demonstrate Distinctness, Uniformity and Stability (DUS), complete Part 2 of the application form and paying the examination fee;
- Deposit propagating material in a Genetic Resources Centre.
- Examination of the application by the PBR Office, which may include a field examination of the comparative growing trial; and including
- Publication of a description and photograph comparing the new variety with similar varieties in Plant Varieties Journal, followed by a six-month period for objection or comment.
- Upon successful completion of all the requirements, resolution of objections (if any) and payment of certificate fee, the applicant(s) receive a Certificate of Plant Breeder's Rights.

Requirement to Supply Comparative Varieties

Once an application has been accepted by the PBR office, it is covered by provisional protection. Also it immediately becomes a 'variety of common knowledge' and thus may be required by others as a comparator for their applications with a higher application number.

Applicants are reminded that they are required to release propagative material for comparative testing provided that the material is used for no other purpose and all material relating to the variety is returned when the trial is complete. The expenses incurred in the provision of material for comparative trials are borne by those conducting the trials.

As the variety is already under provisional protection, any use outside the conditions outlined above would qualify as an infringement and would be dealt with under section 53 of the *Plant Breeder's Rights Act 1994.*

Applicants having difficulties procuring varieties for use in comparative trials are urged to contact the PBR office immediately

UPOV Developments

Montenegro deposited its instrument of accession to the UPOV Convention1 on August 24, 2015, and will become the seventy-third member of the International Union for the Protection of New Varieties of Plants (UPOV) on September 24, 2015.

The United Republic of Tanzania deposited its instrument of accession to the UPOV Convention1 on October 22, 2015, and will become the seventy-fourth member of the International Union for the Protection of New Varieties of Plants (UPOV) on November 22, 2015.

The purpose of UPOV is to provide and promote an effective system of plant variety protection, with the aim of encouraging the development of new varieties of plants, for the benefit of society.

The members of UPOV are:

> African Intellectual Property Organization, Albania, Argentina, Australia, Austria, Azerbaijan, Belarus, Belgium, Bolivia (Plurinational State of), Brazil, Bulgaria, Canada, Chile, China, Colombia, Costa Rica, Croatia, Czech Republic, Denmark, Dominican Republic, Ecuador, Estonia, European Union, Finland, France, Georgia, Germany, Hungary, Iceland, Ireland, Israel, Italy, Japan, Jordan, Kenya, Kyrgyzstan, Latvia, Lithuania, Mexico, Montenegro, Morocco, Netherlands, New Zealand, Nicaragua, Norway, Oman, Panama, Paraguay, Peru, Poland, Portugal, Republic of Korea, Republic of Moldova, Romania, Russian Federation, Serbia, Singapore, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, the former Yugoslav Republic of Macedonia, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Kingdom, United Republic of Tanzania (as of November 22, 2015), United States of America, Uruguay, Uzbekistan and Viet Nam.

Further Information on UPOV and its activities is available on the website located at http://www.upov.int

The adopted UPOV Technical Guidelines (TG) for testing different plant species are now available for this website at
http://www.upov.int/en/publications/tg-rom/index.html

European Developments

Community plant variety rights within the European Union are administered by the Community Plant Variety Office (CPVO) in Angers, France. With more than 2,600 applications per year, the CPVO receives the highest number of requests for variety protection among the members of UPOV. The CPVO provides for one application, one examination and one title of protection that is valid and enforceable in all 27 members of the European Union.

The potential applicants for Plant Variety Rights within European Union are requested to consult Notes for Applicants published by the Community Plant Variety Office (CPVO). This note aims to answer legal, administrative and financial questions that one may have when requesting Community plant variety rights. Further information is available from CPVO website.

Obligation under the International Convention for the Protection of New Varieties of Plants 1991 (UPOV91)

Consistent with Australia's membership of UPOV 1991, the criteria for the granting of protection under the *Plant Breeder's Rights Act 1994* (PBRA) is that the variety: has a breeder; is new, distinct, uniform and stable; has an acceptable name; and that application formalities are completed and relevant fees payed.

Applicants for protection need to be aware of the existence of any other Australian legislation, which could impact on their intended use of the registered variety. Administrators of other Australian legislation may have an interest in applications for registration notified in this journal.

It is feasible for a new variety to be registered under the PBRA, but, as the PBRA co-exists with other laws of the land, the exercise of the breeder's right may be restricted by such legislation. For example, current legislation may prohibit the use of that variety in food, or, the growing of that variety as a noxious weed.

The Plant Breeder's Rights Office (PBRO) advises that it is the responsibility of the applicant and of administrators of legislation to take these matters up directly between the responsible parties and not with the PBRO.

Instructions to Qualified Persons

Instruction to Qualified Persons: Interactive Variety Description System (IVDS) for Preparing Detailed Description for Plant Varieties Journal

For preparing the detailed description, the Plant Breeder's Rights Office (PBRO) has released the Interactive Variety Description System (IVDS) in the Internet (https://pbr-ivds.ipaustralia.plantbreeders.gov.au/pbr_ivds/) for the Qualified Persons (QPs).

In the beginning of April 2005, all QPs have officially been notified of this new system giving them access to IVDS with their individual user name and password. The main purpose of the system is to harmonise variety descriptions at both national and international level and make the PBR application process as smooth and efficient as possible.

The IVDS allows QPs to fill in descriptions on-line by accessing relevant test guidelines and selecting specific characteristics with their various states of expressions from the options provided. The IVDS incorporated all of the approved UPOV test guidelines (and some national equivalents where a UPOV test guideline is not available) into interactive forms with easy to use drop-down menus. QPs can "build" their own additional/special characteristics if they are not available in the guideline. The IVDS also accepts statistical information.

The IVDS emphasises the use of "grouping characteristics" in selecting comparator varieties. Finally, it allows QPs to lodge the completed variety descriptions on-line. There is a minimum typing involved in the process.

The PBRO anticipates that the QPs had the opportunity to familiarise themselves with IVDS during the testing and demonstration phase (August – Dec 2004) and could operate the system comfortably. There are step by step on-screen instructions with examples in each step of IVDS, which will assist the QPs to complete the process smoothly. In addition, PBRO is ready to help QPs, if they encounter any problem. Please send an e-mail to pbr@ipaustralia.gov.au if there is a problem in completing the description using IVDS.

The detailed descriptions are accepted only in the IVDS format.

Also, please note that the after finalising the description through IVDS, the QPs will still need to submit the signed hardcopies of the Part 2 documentations in order to complete the application process. Please contact the PBRO (pbr@ipaustralia.gov.au) for further information.

Official Notice

Declaration of the days from 1 January 2016, until 1 January 2017, when the Designs Office, the Patent Office, the PBR Office and the Trade Marks Office are taken not to be open for business

The close-down provisions in the Designs, Olympic Insignia protection, Patents, Plant Breeder's Rights and Trade Marks legislation provide for the effect of Designs Office, the Patent Office, the PBR Office and the Trade Marks Office not being open for business.

On 19 November 2014, the Director General of IP Australia declared under the close-down provisions the days when the Canberra offices will not be open for business. A copy of the declaration is attached.

The Canberra offices will not be open for business on the following days in the period **1 January 2016 to 1 January 2017**.

All the Canberra offices:
All Saturdays and Sundays in the period

The Canberra office	
Friday, 1 January 2016	New Year's Day Australia
Tuesday, 26 January 2016	Day
Monday, 14 March 2016	Canberra Day
Friday, 25 March 2016	Good Friday
Monday, 28 March 2016	Easter Monday
Monday, 25 April 2016	Anzac Day
Monday, 13 June 2016	Queen's Birthday Holiday
Monday, 26 September 2016	Family & Community Day
Monday, 3 October 2016	Labour Day
Monday, 26 December 2016	Christmas Day (substitute)
Tuesday, 27 December 2016	Boxing Day

Part 2 Public Notices (Acceptances, Descriptions, Grants, and Variations etc)

This part of the *Plant Varieties Journal* provides public notices on Acceptances, Variety Descriptions, Grants and Variations etc. The Part 2 Public Notices pages of ***Plant Varieties Journal*** (**Vol. 28 Issue 4**) are listed below:

ACCEPTANCE

The following varieties are under provisional protection from the date of acceptance:

Erysimum hybrid

WALLFLOWER

‘Inerywiorc’

Application No: 2015/186 Accepted: 01 Oct 2015
Applicant: **Innovaplant Zierpflanzen GmbH & Co KG**.
Agent: **Haars Nursery Pty Ltd**, Somerville, VIC.

Erysimum hybrid

WALLFLOWER

‘Inerywipar’

Application No: 2015/187 Accepted: 01 Oct 2015
Applicant: **Innovaplant Zierpflanzen GmbH & Co KG**.
Agent: **Haars Nursery Pty Ltd**, Somerville, VIC.

Triticum aestivum

WHEAT

‘DS Darwin’

Application No: 2015/242 Accepted: 02 Oct 2015
Applicant: **Agrigenetics, Inc.**.
Agent: **Dow AgroSciences Australia Limited**, Frenchs Forrest, NSW.

Saccharum hybrid

SUGARCANE

‘SRA3’

Application No: 2015/254 Accepted: 02 Oct 2015
Applicant: **Sugar Research Australia**, Indooroopilly, QLD.

Saccharum hybrid

SUGARCANE

‘SRA2’

Application No: 2015/253 Accepted: 02 Oct 2015
Applicant: **Sugar Research Australia**, Indooroopilly, QLD.

Saccharum hybrid

SUGARCANE

‘SRA1’

Application No: 2015/252 Accepted: 02 Oct 2015
Applicant: **Sugar Research Australia**, Indooroopilly, QLD.

Saccharum hybrid

SUGARCANE

‘QS97-2463’

Application No: 2015/251 Accepted: 02 Oct 2015
Applicant: **Sugar Research Australia**, Indooroopilly, QLD.

Citrus sinensis

SWEET ORANGE, NAVEL ORANGE

‘VILLA11’

Application No: 2015/248 Accepted: 02 Oct 2015
Applicant: **Frank Mercuri, Domenic Mercuri, Frank Nardi, Michael Nardi, Joe Nardi**.
Agent: **Variety Access Pty Ltd**, Torbanlea, QLD.

Origanum hybrid

OREGANO

‘Bellissimo’

Application No: 2015/006 Accepted: 06 Oct 2015
Applicant: **Marcus Harvey**.
Agent: **Plants Management Australia Pty. Ltd.**, Dodges Ferry, TAS.

Ozothamnus hybrid

RICEFLOWER

‘Strawberry Cream’

Application No: 2015/246 Accepted: 08 Oct 2015
Applicant: **Aussie Colours Pty Ltd**.
Agent: **InnoV8 Botanics Pty Ltd**, Karana Downs, QLD.

Epichloe uncinata

FUNGAL ENDOPHYTE -MEADOW FESCUE

‘U12’

Application No: 2015/255 Accepted: 09 Oct 2015
Applicant: **Cropmark Seeds Australia Pty Ltd**, South Melbourne, VIC.

Triticum aestivum

WHEAT

‘DS Pascal’

Application No: 2015/244 Accepted: 13 Oct 2015
Applicant: **Agrigenetics, Inc.**.
Agent: **Dow AgroSciences Australia Limited**, Frenchs Forrest, NSW.

Brassica napus

CANOLA

‘Mainstar’

Application No: 2015/241 Accepted: 14 Oct 2015
Applicant: **Forage Innovations Limited**.
Agent: **A J Park**, Canberra, ACT.

Hordeum vulgare

BARLEY

‘LG Maltstar’

Application No: 2015/082 Accepted: 14 Oct 2015
Applicant: **Limagrain Europe s.a.**.
Agent: **Elders Rural Services Australia Ltd**, Ballarat, VIC.

Lolium multiflorum

ITALIAN RYEGRASS

‘LM610’

Application No: 2015/250 Accepted: 20 Oct 2015
Applicant: **New Zealand Agriseeds Ltd**.
Agent: **Heritage Seeds Pty Ltd.**, Howlong, NSW.

Erysimum hybrid

WALLFLOWER

‘Inerypopas’

Application No: 2015/183 Accepted: 21 Oct 2015
Applicant: **Innovaplant Zierpflanzen GmbH & Co KG**.
Agent: **Haars Nursery Pty Ltd**, Somerville, VIC.

Lagerstroemia hybrid

CRAPE MYRTLE

‘Plum Magic’

Application No: 2015/221 Accepted: 29 Oct 2015
Applicant: **Bailey Nurseries, Inc**.
Agent: **Fleming's Nurseries Pty Ltd**, Monbulk, VIC.

Lagerstroemia hybrid

CRAPE MYRTLE

‘Coral Magic’

Application No: 2015/219 Accepted: 29 Oct 2015
Applicant: **Bailey Nurseries, Inc**.
Agent: **Fleming's Nurseries Pty Ltd**, Monbulk, VIC.

Avena sativa

OATS

‘Empire’ syn PAL5

Application No: 2015/258 Accepted: 30 Oct 2015
Applicant: **NDSU Research Foundation**.
Agent: **Seedserv International Pty Ltd**, Mountain Creek, QLD.

Rubus

BLACKBERRY

‘DrisBlackTwelve’

Application No: 2015/273 Accepted: 02 Nov 2015
Applicant: **Driscoll Strawberry Associates, Inc.**.
Agent: **AJ Park**, Canberra, ACT.

Rubus idaeus

RASPBERRY

‘DrisRaspEight’

Application No: 2015/276 Accepted: 02 Nov 2015
Applicant: **Driscoll Strawberry Associates, Inc.**.
Agent: **AJ Park**, Canberra, ACT.

Fragaria x ananassa

STRAWBERRY

‘DrisStrawFortyNine’

Application No: 2015/270 Accepted: 02 Nov 2015
Applicant: **Driscoll Strawberry Associates, Inc.**.
Agent: **AJ Park**, Canberra, ACT.

Rubus

BLACKBERRY

‘DrisBlackFifteen’

Application No: 2015/272 Accepted: 02 Nov 2015
Applicant: **Driscoll Strawberry Associates, Inc.**.
Agent: **AJ Park**, Canberra, ACT.

Vaccinium corymbosum

BLUEBERRY

‘DrisBlueFourteen’

Application No: 2015/274 Accepted: 02 Nov 2015
Applicant: **Driscoll Strawberry Associates, Inc.**.
Agent: **AJ Park**, Canberra, ACT.

Fragaria x ananassa

STRAWBERRY

‘DrisStrawFortyEight’

Application No: 2015/275 Accepted: 02 Nov 2015
Applicant: **Driscoll Strawberry Associates, Inc.**.
Agent: **AJ Park**, Canberra, ACT.

Lactuca sativa

LETTUCE

‘Ezrilla’

Application No: 2015/256 Accepted: 02 Nov 2015
Applicant: **Enza Zaden Beheer B.V.**.
Agent: **Fisher Adams Kelly**, Brisbane, QLD.

Fragaria x ananassa

STRAWBERRY

‘DrisStrawFortySeven’

Application No: 2015/271 Accepted: 02 Nov 2015
Applicant: **Driscoll Strawberry Associates, Inc.**.
Agent: **AJ Park**, Canberra, ACT.

Fragaria xananassa

STRAWBERRY

‘SSL93’

Application No: 2015/259 Accepted: 03 Nov 2015
Applicant: **Edward Vinson Limited**.
Agent: **Red Jewel Fruit Management Pty Ltd**, Bellandean, QLD.

Lupinus albus

WHITE LUPIN

‘WK338’

Application No: 2015/243 Accepted: 03 Nov 2015
Applicant: **Department of Primary Industries for and on behalf of the State of NSW, Grains Research and Development Corporation**, Orange Dc, NSW.

Lagerstroemia hybrid

CRAPE MYRTLE

‘Purple Magic’

Application No: 2015/220 Accepted: 04 Nov 2015
Applicant: **Bailey Nurseries, Inc**.
Agent: **Fleming's Nurseries Pty Ltd**, Monbulk, VIC.

Citrus reticulata

MANDARIN

‘ALB14R6T190’

Application No: 2015/296 Accepted: 12 Nov 2015
Applicant: **Craig Robert Pressler**, Emerald, QLD.

Citrus reticulata

MANDARIN

‘ALB2R11T52’

Application No: 2015/297 Accepted: 13 Nov 2015
Applicant: **Craig Robert Pressler**, Emerald, QLD.

Jacaranda mimosifolia

JACARANDA

‘Sakai01’

Application No: 2015/269 Accepted: 23 Nov 2015
Applicant: **Kiyoshi Sakai**.
Agent: **Touch of Class Plants Pty Ltd**, Tynong, VIC.

Zoysia macrantha

PRICKLY COUCH, COAST COUCH, AUSTRALIAN ZOYSIA

‘LSA01’

Application No: 2015/311 Accepted: 23 Nov 2015
Applicant: **Ozbreed Pty Limited**, Richmond, NSW.

Spyridium globulosum

BASKET BUSH

‘Green Globe’

Application No: 2015/277 Accepted: 23 Nov 2015
Applicant: **Lullfitz Investments Pty Ltd**, Wanneroo, WA.

Trifolium subterraneum var. subterraneum

SUBTERRANEAN CLOVER

‘SE019’

Application No: 2015/266 Accepted: 26 Nov 2015
Applicant: **Western Australian Agriculture Authority**, South Perth, WA.

Trifolium subterraneum var. yanninicum

SUBTERRANEAN CLOVER

‘YM025’

Application No: 2015/267 Accepted: 26 Nov 2015
Applicant: **Western Australian Agriculture Authority**, South Perth, WA.

Lactuca sativa

LETTUCE

‘Jasperinas’

Application No: 2015/287 Accepted: 26 Nov 2015
Applicant: **Rijk Zwaan Zaadteelt en Zaadhandel B.V.**.
Agent: **Rijk Zwaan Australia Pty Ltd**, Daylesford, VIC.

Trifolium subterraneum var. yanninicum

SUBTERRANEAN CLOVER

‘YM009’

Application No: 2015/268 Accepted: 26 Nov 2015
Applicant: **Western Australian Agriculture Authority**, South Perth, WA.

Rubus idaeus

RASPBERRY

‘Pearl’

Application No: 2015/304 Accepted: 27 Nov 2015
Applicant: **Berryworld Plus Limited**.
Agent: **Red Jewel Fruit Management Pty Ltd**, Ballandean, QLD.

Lilium hybrid

LILY

‘DALIAN’

Application No: 2015/249 Accepted: 27 Nov 2015
Applicant: **Mak Breeding Rights B.V.**.
Agent: **AJ Park**, Canberra, ACT.

Solanum lycopersicum

TOMATO

‘SV0215TH’

Application No: 2015/299 Accepted: 30 Nov 2015
Applicant: **Seminis Vegetable Seeds, Inc.**.
Agent: **Monsanto Australia Limited**, Melbourne, VIC.

Prunus avium

SWEET CHERRY

‘Big Star’

Application No: 2015/300 Accepted: 02 Dec 2015
Applicant: **Alma Mater Studiorum - University of Bologna**.
Agent: **Graham's Factree Pty Ltd**, Country, VIC.

Crassula capitella

CAMPFIRE PLANT

‘Bonfire’

Application No: 2015/298 Accepted: 02 Dec 2015
Applicant: **Trustee for R Servaas Family Trust**, Wanneroo, WA.

Bursaria spinosa Cav

SWEET BURSARIA, BLACKTHORN

‘Allyn Emerald-Carpet’

Application No: 2015/279 Accepted: 03 Dec 2015
Applicant: **V.F. & N.C. Jupp**, East Gresford, NSW.

Abutilon hybrid

CHINESE LANTERN

‘LuckyLanternYellow’

Application No: 2015/016 Accepted: 03 Dec 2015
Applicant: **NuFlora International Pty Ltd**.
Agent: **Touch of Class Planrs Pty Ltd**, Tynong, VIC.

Cannabis sativa

INDUSTRIAL HEMP

‘Farnsfield’

Application No: 2015/278 Accepted: 03 Dec 2015
Applicant: **Agri Fibre Industries Pty. Ltd.**, Woongarra, QLD.

Rubus

HYBRID BLACKBERRY

‘DrisBlackThirteen’

Application No: 2015/310 Accepted: 03 Dec 2015
Applicant: **Driscoll Strawberry Associates, Inc.**.
Agent: **AJ Park**, Canberra, ACT.

Correa pulchella

CORREA

‘YesPlease’

Application No: 2015/295 Accepted: 04 Dec 2015
Applicant: **Peter James Ollerenshaw**.
Agent: **Robert Dunstone**, Wright, ACT.

Argyranthemum frutescens

MARGUERITE DAISY

‘SUPA2221’

Application No: 2015/316 Accepted: 07 Dec 2015
Applicant: **NuFlora International Pty Ltd**.
Agent: **Ramm Botanicals Holdings Pty Ltd**, Kangy Angy, NSW.

Prunus avium

SWEET CHERRY

‘Royal Rosy’

Application No: 2015/322 Accepted: 08 Dec 2015
Applicant: **Zaiger's Inc. Genetics**.
Agent: **Graham's Factree Pty Ltd**, Hoddles Creek, VIC.

Vaccinium virgatum

RABBIT-EYE BLUEBERRY, BLACK BLUEBERRY

‘Velluto Blue’

Application No: 2015/301 Accepted: 09 Dec 2015
Applicant: **The New Zealand Institute for Plant and Food Research Limited**.
Agent: **A J Park**, Canberra, ACT.

Prunus avium

SWEET CHERRY

‘Royal Cerise’

Application No: 2015/323 Accepted: 10 Dec 2015
Applicant: **Zaiger's Inc. Genetics**.
Agent: **Graham's Factree Pty Ltd**, Hoddles Creek, VIC.

Citrus reticulata

MANDARIN HYBRID

‘ARCCIT1519’ syn African Sunset

Application No: 2015/283 Accepted: 11 Dec 2015
Applicant: **Agricultural Research Council**.
Agent: **Spruson & Ferguson**, Sydney, NSW.

Citrus reticulata

MANDARIN HYBRID

‘ARCCIT1614’

Application No: 2015/284 Accepted: 11 Dec 2015
Applicant: **Agricultural Research Council**.
Agent: **Spruson & Ferguson**, Sydney, NSW.

Citrus x paradisi

GRAPEFRUIT

‘ARCCIT1671’ syn Flamingo

Application No: 2015/285 Accepted: 11 Dec 2015
Applicant: **Agricultural Research Council**.
Agent: **Spruson & Ferguson**, Sydney, NSW.

Brassica napus

CANOLA

‘PR2AN540’

Application No: 2015/318 Accepted: 14 Dec 2015
Applicant: **Bayer CropScience LP**.
Agent: **Bayer CropScience Pty Ltd**, Horsham, VIC.

Brassica napus

CANOLA

‘PR3AN547’

Application No: 2015/317 Accepted: 14 Dec 2015
Applicant: **Bayer CropScience LP**.
Agent: **Bayer CropScience Pty Ltd**, Horsham, VIC.

Brassica napus

CANOLA

‘PB3AN259’

Application No: 2015/319 Accepted: 15 Dec 2015
Applicant: **Bayer CropScience LP**.
Agent: **Bayer CropScience Pty Ltd**, Horsham, VIC.

Brassica napus

CANOLA

‘PA3AN159’

Application No: 2015/320 Accepted: 15 Dec 2015
Applicant: **Bayer CropScience LP**.
Agent: **Bayer CropScience Pty Ltd**, Horsham, VIC.

Lactuca sativa

LETTUCE

‘Diskoa’

Application No: 2015/321 Accepted: 15 Dec 2015
Applicant: **Vilmorin**.
Agent: **Shelston IP Pty Ltd**, Sydney, NSW.

Lactuca sativa

LETTUCE

‘Chicarita’

Application No: 2015/335 Accepted: 16 Dec 2015
Applicant: **Rijk Zwaan Zaadteelt en Zaadhandel B.V.**.
Agent: **Rijk Zwaan Australia Pty Ltd**, Daylesford, VIC.

Vaccinium corymbosum

BLUEBERRY

‘Cipria’

Application No: 2015/302 Accepted: 18 Dec 2015
Applicant: **The New Zealand Institute for Plant and Food Research Limited**.
Agent: **A J Park**, Canberra, ACT.

Variety Descriptions

Common (Genus Species)	Variety	Title Holder
Leek *(Allium porrum)*	NUNTON	Nunhems B.V.
Peruvian Lily *(Alstroemeria hybrid)*	Zapriclair	Van Zanten Plants B. V.
Peanut *(Arachis hypogaea)*	Taabinga	Peanut Company of Australia Limited; Grains Research and Development Corporation, Agri-Science Queensland, Department of Agriculture, Fisheries and Forestry
Peanut *(Arachis hypogaea)*	Kairi	Peanut Company of Australia Limited; Grains Research and Development Corporation, Agri-Science Queensland, Department of Agriculture, Fisheries and Forestry
Butterfly Bush *(Buddleja hybrid)*	Blue Chip	North Carolina State University
Butterfly Bush *(Buddleja hybrid)*	Blue Chip Jr	North Carolina State University
Butterfly Bush *(Buddleja hybrid)*	IceChip	North Carolina State University
Butterfly Bush *(Buddleja hybrid)*	Lilac Chip	North Carolina State University
Butterfly Bush *(Buddleja hybrid)*	Pink Micro Chip	North Carolina State University
Butterfly Bush *(Buddleja hybrid)*	Purplehaze	North Carolina State University
Lemon Scented Gum *(Corymbia citriodora)*	Babycit	Humphris Family Trust
Melon *(Cucumis melo)*	Crispy Pear	Nunhems B.V.
Cucumber *(Cucumis sativus)*	Luxell	Nunhems B.V.
Gaura *(Gaura lindheimeri x coccinea)*	Redgabl	Edward John Bunker
Hebe *(Hebe hybrid)*	Lemon	Lyndale Intellectual Property Ltd

	Frosting	
Hebe *(Hebe hybrid)*	Lilac Time	Stegaydan Pty Ltd T/A Dinki Di Newplants
Hebe *(Hebe hybrid)*	Jewel of the Nile	Stephen Burton
Hebe *(Hebe speciosa)*	Santa Monica	Stephen Burton
Barley *(Hordeum vulgare)*	Spartacus CL	Intergrain Pty Ltd, Agriculture Victoria Services Pty Ltd
Lettuce *(Lactuca sativa)*	Mercurio	Enza Zaden Beheer B.V.
Lettuce *(Lactuca sativa)*	Grandolia	Nunhems B.V.
Lettuce *(Lactuca sativa)*	Greenflash	Nunhems B.V.
Lettuce *(Lactuca sativa)*	NITAFLASH	Nunhems B.V.
Lettuce *(Lactuca sativa)*	Primagol	Nunhems B.V.
Lentil *(Lens culinaris)*	PBA Jumbo2	Agriculture Victoria Services Pty Ltd, Grains Research and Development Corporation
Lentil *(Lens culinaris)*	PBA Giant	Agriculture Victoria Services Pty Ltd, Grains Research and Development Corporation
Lentil *(Lens culinaris)*	PBA Greenfield	Agriculture Victoria Services Pty Ltd, Grains Research and Development Corporation
Spiny Headed Mat Rush *(Lomandra longifolia)*	Lompet1	Janet Lynne Petty
Mandevilla *(Mandevilla sanderi)*	FLOMANPIW	Floreta Intellectual Property Pty Ltd
Mandevilla *(Mandevilla sanderi)*	FLOMANTOG	Floreta Intellectual Property Pty Ltd
Mandevilla *(Mandevilla sanderi)*	FLOMANRER	Floreta Intellectual Property Pty Ltd
Mandevilla *(Mandevilla sanderi)*	FLOMANWHW	Floreta Intellectual Property Pty Ltd
Mandevilla *(Mandevilla sanderi)*	FLOMANFOP	Floreta Intellectual Property Pty Ltd
Red Bayberry *(Morella rubra)*	N1MR09	The University of Queensland

Red Bayberry *(Morella rubra)*	N1MR06	The University of Queensland
Red Bayberry *(Morella rubra)*	N1MR07	The University of Queensland
Apricot *(Prunus armeniaca)*	Fred's Choice	S and E Zito
Japanese Pear *(Pyrus pyrifolia)*	SM 1977	Temhem Pty Ltd
Raspberry *(Rubus idaeus)*	Pacific Royale	Pacific Berry Breeding, L.L.C.
Raspberry *(Rubus idaeus)*	Pacific Deluxe	Pacific Berry Breeding, L.L.C.
Sage *(Salvia hybrid)*	SER-Wish	John Fisher
Potato *(Solanum tuberosum)*	Top Cat	Colorado State University Research Foundation
Potato *(Solanum tuberosum)*	Esmeralda	Station de Recherche du Comite Nord
Spinach *(Spinacia oleracea)*	Calisteo	Nunhems B.V.

Details of Application	
Application Number	2008/014
Variety Name	'Fred's Choice'
Genus Species	*Prunus armeniaca*
Common Name	Apricot
Synonym	Sebacot
Accepted Date	05 Sep 2008
Applicant	S and E Zito, Shepparton East Victoria Australia
Agent	N/A
Qualified Person	Leslie Mitchell

Details of Comparative Trial

Location	Shepparton East Victoria Australia
Descriptor	Apricot TG/70/4 Rev. *Prunus armeniaca*
Period	2012 - 2016
Conditions	Budded trees were planted in a variety evaluation block. Trees are healthy and growing evenly with no obvious signs of disease or abnormality.
Trial Design	Randomised complete block with 5 replicates. Two trees per replicate
Measurements	Fruit size and shape, Leaf size and shape, Petal size.
RHS Chart - edition	N/A

Origin and Breeding

Chance seedling: was identified in a small home orchard located at Kilmore in southern Victoria in 1995. The tree grew large, firm fruit with good flavour, maturing mid-season. The fruit was identified as having commercial possibilities and further development was undertaken. Buds were collected and grafted on to plum rootstocks and maintained for observation until 2001. Fruit showed the same characteristics as the parent tree but flavour was poor. Further grafts were then made onto peach rootstocks in 2002 with the very first fruit being picked in 2004. This fruit continued to show good size, fruit firmness and colour but had superior flavour. Trees were then taken through two further grafting cycles and continued to produce trees and fruit showing consistent phenotypic characteristics.
Breeder: S Zito, Shepparton East Victoria Australia.

Details of Application	
Application Number	2015/257
Variety Name	'Spartacus CL'
Genus Species	*Hordeum vulgare*
Common Name	Barley
Synonym	IGB1334T
Accepted Date	15 Feb 2016
Applicant	InterGrain Pty Ltd, Bibra Lake, WA
Agent	N/A
Qualified Person	David Moody

Details of Comparative Trial	
Location	Horsham, Victoria, Australia
Descriptor	Barley (*Hordeum Vulgare*)TG/19/10
Period	June - November 2015
Conditions	The seeding rate was 60kg/ha, corresponding to approximately 150 seeds per square metre. Each replicate contained approximately 600 plants. The trial was sown on June 2015
Trial Design	Complete Randomized Block Design with two replicates, in plots of 6 rows by 4x4 metres
Measurements	Sixty randomly selected plants were assessed individually for each trait
RHS Chart - edition	N/A

Origin and Breeding

Controlled pollination: The imidazolinone tolerance donor variety 'Scope' was backcrossed three times to 'Hindmarsh' before a final cross was made in March 2010 between Scope/4*Hindmarsh and the line HMVB0325-106. Doubled haploids were produced by the DAFWA laboratories from selected BC4F1 plants, with the plantlets being grown in South Perth Controlled Environment Rooms through to maturity. Seed of the DH lines was multiplied in "head-hills" during 2011 at Shenton Park, WA. Individual DH lines from the population were selected for tolerance to imidazolinone herbicides by applying the herbicide to germinated seedlings. Multiplication of seed of the selected tolerant DH lines occurred at Horsham over the 2011/12 summer, allowing inclusion in multi-environment yield testing in 2012. IGB1334T was identified for further seed multiplication over the 2012/13 summer for evaluation in a national network of replicated trials during 2013. Micromalt quality assessment of 2012 trials was used to identify the malting quality potential of IGB1334T, which was confirmed from the more rigorous micromalting analysis of samples from the 2013 season trials. IGB1334T was included in herbicide tolerance screening trials during 2013 and 2014 in support of registration for the use of the product Intervix on this variety. IGB1334T was entered into National Variety Trials in 2014 and again in 2015. In Feb 2015, IGB1334T was accepted into the Barley Australia Malting Quality Accreditation system. Breeder: InterGrain Pty Ltd, Bibra Lake, WA.

Qualified Person	Mark Lunghusen

Details of Comparative Trial	
Location	Tynong VIC
Descriptor	TG/263/1 Rev. *Buddleja*
Period	July to November 2014
Conditions	Plants were grown in 14cm pots in plastic covered greenhouse in commercial pine bark based potting mix with controlled release fertiliser. Plants were grown on benches with overhead watering as required.
Trial Design	10 plants in block design
Measurements	Taken from middle third of stem
RHS Chart - edition	Fifth edition

Origin and Breeding

Open pollination: followed by seedling selection: 'Blue Chip' originated as a third generation descendant from a cross between 'Honeycomb' and ('Nanho Purple' x *Buddleja lindleyana*), made in 2001 at North Carolina State University in Raleigh, North Carolina, USA. The seeds resulting from the cross were harvested in fall of 2001 and germinated in a greenhouse at North Carolina State University in the winter of 2002. The resulting seedlings were planted in field trials in spring of 2002. These plants flowered in summer of 2002 and seed was collected from all plants and bulked. This bulk seed was germinated summer of 2002 and seed was collected from all plants and bulked. This bulk seed was germinated in the winter of 2003 and the resulting seedlings were planted in the field in spring of 2003. These plants flowered in summer of 2003 and one plant, designated NC2003-7, was selected for its compact growth habit and flower colour. Open pollinated seed was collected from this selection and the bulk seed was germinated in the winter of 2004. The resulting seedlings were planted in the field in the spring of 2004. These plants flowered in the summer of 2004 and a single plant, designated NC2004-9, was selected for its multi-branched, compact growth habit and attractive flower colour. This single plant was given the denomination 'Blue Chip'. Breeders Layne Snelling and Dennis Werner, North Carolina State University, USA

Origin and Breeding

Controlled pollination followed by seedling selection: Seed was harvested from the female parent, germinated and grown on in a greenhouse in Raliegh NC, USA. The resultant seedlings were planted in field trials in May 2009 in Jackson Springs, North Carolina. 'Blue Chip Jr' was selected in August 2009. The first asexual propagation of 'Blue Chip Jr' was conducted in August 2009 in Raleigh, North Carolina. Breeder: North Carolina State University, USA.

First sold in USA in Aug 2013.

Description: **Mark Lunghusen**, Australian Horticultural Services Pty Ltd, Wonga Park Vic 3115.

Details of Application	
Application Number	2014/148
Variety Name	'IceChip'
Genus Species	*Buddleja* hybrid
Common Name	Butterfly Bush
Synonym	Nil
Accepted Date	18 Aug 2014
Applicant	North Carolina State University, Raleigh, North Carolina, USA
Agent	Touch of Class Plants Pty Ltd, Tynong, VIC.
Qualified Person	Mark Lunghusen

Details of Comparative Trial	
Location	Tynong, VIC
Descriptor	TG/263/1 Rev. Buddleja
Period	July to November 2014
Conditions	Plants were grown in 14 cm pots in plastic covered greenhouse in commercial pine bark based potting mix with controlled release fertiliser. Plants were grown on benches with overhead watering as required.
Trial Design	10 plants in block design
Measurements	Taken from middle third of the stem
RHS Chart - edition	Fifth edition

Origin and Breeding

Controlled pollination followed by seedling selection: The plant originated from a controlled cross conducted during the summer of 2005 between the variety 'Blue Chip' as the female parent and a proprietary selection designated 'NC2002-12' as the male parent. The resultant seedlings were planted in field trials in the spring of 2006 in Jackson Springs, North Carolina. 'Ice Chip' was selected in August 2006 based on its compact and spreading growth habit, dense branching, white flowers, inflorescence of intermediate size and lack of seed set when grown in the field. The first asexual propagation of 'Ice Chip' was conducted in August 2006 in Raleigh, North Carolina. Breeder North Carolina State University, USA.

Origin and Breeding

Controlled pollination followed by seedling selection: 'Lilac Chip' x 'Miss Molly'. Seed was harvested from the female parent, germinated in a greenhouse. The seedlings were planted in a field for evaluation in Jackson Springs North Carolina, USA in May 2010. The selected seedling was designated NC2010-2 in July 2010 and grown on to determine stability and uniformity. Breeder: North Carolina State University, USA.

Period	2013-2014
Measurements	As per CPVO protocol
RHS Chart - edition	n/a

Origin and Breeding

Controlled pollination: The 2 parents of the hybrid, the female and the male were produced using a Double Haploid procedure and are each homozygous non-segregating, stable and uniform, the hybrid made with these 2 lines is also uniform. Hybrid seed produced in this manner when required. Characteristics used in selection: Plant vigour, balance of fruit set; fruit shape, length, spinning and colour. Breeder: Nunhems B.V. Haelen, The Netherlands.

Description: **John Oates**, VF Solutions, Merimbula, NSW.

Details of Application	
Application Number	2014/232
Variety Name	'Redgabl'
Genus Species	*Gaura lindheimeri* x *coccinea*
Common Name	Gaura
Synonym	Nil
Accepted Date	17 Nov 2014
Applicant	Edward John Bunker, Redland Bay, QLD
Agent	Aussie Winners Pty Ltd, Redland Bay, QLD
Qualified Person	Pamela Berryman

Details of Comparative Trial	
Location	191 Gordon Road, Redland Bay, QLD
Descriptor	Gaura lindheimeri x coccinea Lillipop Blush
Period	Feb 2014 to Dec 2014
Conditions	20 plants of *Gaura lindheimi* 'Lillipop Pink' and *Gaura lindheimi* 'Lillipop Blush' were trialled under 18% hail netting. All were under irrigation and sprayed with a general fungicide preventative which was applied to all crops in the trial area, as needed
Trial Design	Randomly spaced plants 20 of each
Measurements	Observations from all plants
RHS Chart - edition	2007

Origin and Breeding

Spontaneous mutation: The new cultivar was discovered as a branch mutation of *Gaura lindheimeri* 'RedGapi' (Lillipop Pink) at Redland Bay. Asexual reproduction was accomplished by softwood cuttings and propagation has determined that the characteristics of this cultivar are stable and reproduced true to type in successive generations. Breeder: Edward John Bunker, Redland Bay, QLD.

Description: **Mark Lunghusen**, Australian Horticultural Services Pty Ltd, Wonga Park Vic 3115

Details of Application	
Application Number	2014/230
Variety Name	'Lilac Time'
Genus Species	*Hebe* hybrid
Common Name	Hebe
Synonym	Nil
Accepted Date	06 Nov 2014
Applicant	Stegaydan Pty Ltd T/A Dinki Di Newplants, Frankston, VIC
Agent	Touch of Class Plants Pty Ltd, Tynong VIC
Qualified Person	Mark Lunghusen
Details of Comparative Trial	
Location	Tynong, VIC
Descriptor	TG/286/1 Hebe
Period	July to November 2014
Conditions	Plants were grown in 14cm pots in plastic covered greenhouse in commercial pine bark based potting mix with controlled release fertiliser. Plants were grown on benches with overhead watering as required.
Trial Design	10 plants in block design
Measurements	Taken from middle third of the stem
RHS Chart - edition	Fifth edition
Origin and Breeding	

Open pollination followed by seedling selection: A seedling was observed near the putative parent plant, Hebe 'Icing Sugar' and a number of other Hebe varieties at the breeder's property, showing narrower leaves, a different flower colour and disease resistance. Cuttings were taken from this seedling and grown on to determine distinctness and stability. Breeders: Stephen & Gayle Membrey, Frankston, VIC.

Details of Application	
Application Number	2014/194
Variety Name	'SM 1977'
Genus Species	*Pyrus pyrifolia*
Common Name	Japanese Pear
Synonym	Nil
Accepted Date	16 Sep 2014
Applicant	Temhem Pty Ltd, Lemnos VIC
Agent	Leslie Mitchell, Shepparton, VIC
Qualified Person	Leslie Mitchell

Details of Comparative Trial	
Location	Lemnos, VIC
Descriptor	Japanese Pear (*Pyrus pyrifolia)*TG/149/2
Period	2013-2016
Conditions	The trees in the comparative trial were grafted onto to pear rootstocks and planted on open Tatura architecture in August 2013. The trees grew vigorously and set a substantial crop in the spring of 2015. The crop was thinned to an even loading of around 40 fruit per tree. The trial was managed as part of a commercial Nashi pear orchard.
Trial Design	Small plot replicated trial. 5 single tree replicates.
Measurements	Budded trees were planted in a variety evaluation block. Trees are healthy and growing evenly with no obvious signs of disease or abnormality.
RHS Chart - edition	N/A

Origin and Breeding

Spontaneous mutation: 'SM 1977' was first identified as a sport or spontaneous mutation in a block of 'Nijisseiki' Japanese pears during the harvest of 2004. The selection was made on the basis of large fruit size, smooth skin finish and earlier maturity than the parent. The branch bearing this fruit was tagged and buds taken and grafted on to pear rootstocks in the spring of that year. The grafts produced fruit which was true to type in 2007. Further grafts were completed in 2008, 2011 and 2014. Through each of these generational cycles the plant has remained stable and produced fruit which is true to type. Breeder: Shannan Memhet,Temhem Pty Ltd, Lemnos Victoria.

Conditions	Australian trial of 'Nunton' and 'Belton' for photographic purposes produced some quantitative results
Trial Design	40 plants of each grown on raised bed randomised planting weeks 20-47 2015
Measurements	As according to the technical protocol
RHS Chart - edition	2001
Origin and Breeding	
Controlled breeding programme: In the development of male parents for our leek hybrid 'Nunton', we used the technique of Half sib family selection. In practice this means a five generation cycle of half sib family selection, starting with a population in the Bluegreen winter type. At the end of this five year cycle, single plants are selected and propagated by vegetative propagation. These clones are then tested for use as the hybrid parent. The male parent of 'Nunton' is such a clone. In the development of female parents, we use the technique of sister/brother crosses. In practice this means we cross a male sterile plant with a male fertile plant out of the same family (brother). The goal is to enrich the female with better characteristics and to increase the level of homozygosity, although this growth in homozygosity is low. Breeder: Nunhems B.V. The Netherlands.

Agent	N/A
Qualified Person	Mark Lunghusen

Details of Comparative Trial	
Location	Mooroolbark, VIC
Descriptor	Eucalyptus (new) (DRAFT) sub-genus Symphyomyrtus
Period	Jan-Oct 2015
Conditions	Plants grown in 20cm pots in commercial pine bark based potting media with controlled release fertilizer. Plants were grown in a shade-house and watered by overhead sprinklers as required. All plants in the trial were grafted onto *Corymbia citriodora* seedlings in October 2014.
Trial Design	10 plants in block design
Measurements	Taken from middle third of stem
RHS Chart - edition	Fifth edition

Origin and Breeding

Open pollination followed by seedling selection: In 2007 seed was collected from the female parent variety. The seed was sown and grown in containers for selection. The candidate variety was selected from the resultant seedlings based on plant height. It was propagated by grafting and grown on to determine stability and uniformity. Breeder Barry Humphris, Mooroolbark VIC.

Application Number	2014/077
Variety Name	'PBA Jumbo2'
Genus Species	*Lens culinaris*
Common Name	Lentil
Synonym	Jumbo2
Accepted Date	22 May 2014
Applicant	Agriculture Victoria Services Pty Ltd, Attwood, VIC. Grains Research and Development Corporation, Barton, ACT.
Agent	PB Seeds Pty. Ltd. Kalkee, VIC.
Qualified Person	Janine Sounness
Details of Comparative Trial	
Location	Kalkee, VIC.
Descriptor	Lentil (*Lens culinaris*) TG/210/1
Period	May to December 2014
Conditions	The trial was sown in May, 2014, on Wimmera grey cracking clay soil at Kalkee, Victoria. Rainfall was below average and some frost events occurred in spring.
Trial Design	Field trial: Randomised complete block design with 4 replicates, 8 rows wide with 1980 plants per replicate.
Measurements	Anthocyanin colouration, early vigour, *ascochyta* on foliage, flower colour, flowering and maturity time, plant height, growth habit, leaf traits, pod traits, dry seed traits such as width, weight.
RHS Chart - edition	N/A

Origin and Breeding

Controlled pollination: 'PBA Jumbo2' is derived from a three way cross between three elite lentil lines. The initial cross was between a high yielding, disease resistant red lentil breeding line (CIPAL0205; pedigree = Indianhead/PI374118//Northfield) and the vigorous large green 'Boomer', the first green lentil bred specifically for Australian conditions. F1 seed derived from this cross was sown and used as the female parent for a further cross with the line CIPAL401 (a vigorous, widely adapted, high-yielding large red lentil). Hybridisation was confirmed using seed characteristics and F2 seed (harvested from an individual plant) sown in the field in 2004. F3 seed was bulk harvested and re-sown in (segregating) plots in 2005. Bulk selection was performed on seed lots to select for red cotyledon and grey seed coat colour. In the same way, F4 seed was bulk harvested and re-sown in plots in 2006. Single plant selection was performed from a F4 plant, and seed were sown into a progeny row in 2007. Based on agronomic and visual seed characteristics 'PBA Jumbo2' was selected for further evaluation in field and controlled environment experiments from 2008-13. 'PBA Jumbo2' was selected for release based on a combination of agronomic type, high grain yield across different regions, mid-season maturity, resistance to ascochyta blight and botrytis grey mould, and grain characteristics (large red lentil). 'PBA Jumbo2' was initially evaluated as breeding line 03-100L*1-07H4025and 'PBA Jumbo2' when included in National Variety Testing. 'PBA Jumbo2' was developed by Pulse Breeding Australia, funded by GRDC, Victorian DEPI, SARDI, DAFWA, NSW DPI and TIAR. Breeding personnel included Michael Materne, Mirella Butsch, Larn McMurray, Matthew Rodda, Stephen Murden, Bruce Holding, Dianne Noy, Joe Panozzo, Sarah Meyer, Jason Brand, Matt Dare, Kerry Regan, Geoff Dean and Peter Matthews.

Common Name	Lentil
Synonym	Giant
Accepted Date	22 May 2014
Applicant	Agriculture Victoria Services Pty Ltd, Attwood, VIC. Grains Research and Development Corporation, Barton, ACT.
Agent	PB Seeds Pty. Ltd. Kalkee, Vic.
Qualified Person	Janine Sounness

Details of Comparative Trial	
Location	Kalkee, VIC.
Descriptor	Lentil (*Lens culinaris*) TG/210/1
Period	May to December 2014
Conditions	The trial was sown in May, 2014, on Wimmera grey cracking clay soil at Kalkee, Victoria. Rainfall was below average and some frost events occurred in spring.
Trial Design	Field trial: Randomised complete block design with 4 replicates, 8 rows wide with 1980 plants per replicate.
Measurements	Anthocyanin colouration, early vigour, ascochyta on foliage, flower colour, flowering and maturity time, plant height, growth habit, leaf traits, pod traits, dry seed traits such as width, weight.
RHS Chart - edition	N/A

Origin and Breeding

Controlled pollination: 'PBA Giant' is derived from a cross between the high yielding, early maturity PBA line PBA Flash and the tall, mid to late flowering line 'Boomer', first green lentil bred specifically for Australian conditions. Hybridisation was confirmed using seed characteristics and F2 seed sown in the field in 2005. F3 seed was bulk harvested and re-sown in (segregating) plots in 2006. A single pod (seed) was selected from an F3 plant and grown under controlled conditions in the glasshouse over summer 2006/07. All the seed from a single F4 plant was sown in a progeny row in the field in 2008. Based on visual characteristics 'PBA Giant' was selected for further evaluation in field and controlled environment experiments from 2009-13. 'PBA Giant' was selected for release based on a combination of grain yield, mid maturity, ascochyta blight resistance and grain characteristics, namely green seed coat. 'PBA Giant' was initially evaluated as breeding line 04-201L-07HS3004 and PBA Giant when included in National Variety Testing. 'PBA Giant' was developed by Pulse Breeding Australia, funded by GRDC, Victorian DEPI, SARDI, DAFWA, NSW DPI and TIAR. Breeding personnel included Michael Materne, Mirella Butsch, Larn McMurray, Matthew Rodda, Stephen Murden, Bruce Holding, Dianne Noy, Joe Panozzo, Sarah Meyer, Jason Brand, Matt Dare, Kerry Regan, Geoff Dean and Peter Matthews.

Origin and Breeding

Controlled pollination: 'PBA Greenfield is derived from a three way cross between three elite lentil lines. The initial cross was between a high yielding, disease resistant red lentil breeding line (CIPAL0205; pedigree = Indianhead/PI374118//Northfield) and the vigorous large green 'Boomer', the first green lentil bred specifically for Australian conditions. F1 seeds derived from this cross was sown and used as the female parent for a further cross with the early maturing red lentil 'PBA Flash'. Hybridisation was confirmed using seed characteristics and F2 seed (harvested from an individual plant) sown in the field in 2004. A single pod (seed) was selected from an F2 plant (from segregating field plots) in 2004 and grown under controlled conditions in the glasshouse over summer 2004/05. All the seed from a single F3 plant was sown in a progeny row in the field in 2005. Based on visual agronomic characteristics 'PBA Greenfield' was selected for further evaluation in field and controlled environment experiments from 2006-13. As required, bulk selection was performed on seed lots to select for green lentil type, namely yellow cotyledon and green/tan seed coat. 'PBA Greenfield' was selected for release based on a combination of agronomic type, high grain yield, and mid-season maturity, resistance to ascochyta blight and botrytis grey mould, and grain characteristics. 'PBA Greenfield' was initially evaluated as breeding line 03-098L*7-04HS005and PBA Greenfield when included in National Variety Testing. 'PBA Greenfield' was developed by Pulse Breeding Australia, funded by GRDC, Victorian DEPI, SARDI, DAFWA, NSW DPI and TIAR. Breeding personnel included Michael Materne,

Mirella Butsch, Larn McMurray, Matthew Rodda, Stephen Murden, Bruce Holding, Dianne Noy, Joe Panozzo, Sarah Meyer, Jason Brand, Matt Dare, Kerry Regan, Geoff Dean and Peter Matthews.

Details of Application	
Application Number	2014/205
Variety Name	'Mercurio'
Genus Species	*Lactuca sativa*
Common Name	Lettuce
Synonym	Nil
Accepted Date	14 Oct 2014
Applicant	Enza Zaden Beheer B.V. Haling, The Netherlands
Agent	Fisher Adams Kelly, Brisbane, QLD
Qualified Person	Steven Mitchell

Details of Comparative Trial	
Location	Werribee, VIC
Descriptor	Lettuce (Lactuca sativa) TG /13/10 Rev.2
Period	Sow - 25/6/15; Transplanted - 25/8/15; Assessment - 17/11/15
Conditions	Grown within a commercial Lettuce crop under commercial crop husbandry. Quite dry with about 37mm of in-crop rainfall which is less than half the average rainfall at that time of year. The night temperatures were over a degree cooler than average and the day temperatures about a degree cooler than average.
Trial Design	Replicated four times with each plot having 27 plants. Transplanting was randomised via Mead & Curnow: Statistical Methods in Agriculture & Experimental Biology, 1990.
Measurements	Field Trial in accordance with UPOV TG.
RHS Chart - edition	N/A

Origin and Breeding

Controlled Pollination: The crossed seeds were germinated in a wetted paper tray and then inoculated with the AUS 3 Bremia strain. Resistant seedlings were potted up and grown to seed (F2). These F2 seeds were sown in the Lettuce Big Vein Virus (LBVV) breeding nursery at Melbourne. The plant selection (F3) criteria was based on head size and frame, core length, LBVV reading and style. Leaf disc bremia test (AUS 4 bremia strain) performed on selected plants and were grown to seed. Seedling bremia test (AUS 4) was performed on the harvested seeds. These F3 seeds were sown in the Lettuce Big Vein Virus breeding nursery at Gatton. The plant selection (F4) criteria as above. Leaf disc bremia test (AUS 4) performed on selected plants and were grown to seed. Then a seedling bremia test (AUS 4) was performed on the harvested seed to confirm full bremia resistance. The F4 seeds were sown in the Winter nursery at Sale. The plant selection (F5) criteria as above. Then a seedling bremia test (AUS 5) was performed on the harvested seed to confirm full bremia resistance. The F5 seed were sown in the Winter nursery at Gatton. The plant selection (F6) criteria as above. Then a seedling bremia test (AUS 5) was performed on the harvested seed to confirm full bremia resistance. Then an E number was created. Seed production was done in the Narromine glasshouse and seed then sent to Holland to be verified as fully resistant to bremia. Breeder: Steven Mitchell and Daniel Trimboli, Enza Zaden Australia Pty Ltd.

Description: **John Oates**, Merimbula, NSW.

Details of Application	
Application Number	2014/176
Variety Name	'NITAFLASH'
Genus Species	*Lactuca sativa*
Common Name	Lettuce
Synonym	Nil
Accepted Date	22 Sep 2014
Applicant	Nunhems B.V., Haelen, The Netherlands
Agent	Shelston IP, Sydney, NSW
Qualified Person	John Oates

Details of Comparative Trial	
Overseas Testing Authority	Naktuinbouw, The Netherlands
Overseas Data Reference Number	SLA 3389
Location	Naktuinbouw, Roelofarendsveen, The Netherlands
Descriptor	Lettuce (*Lactuca sativa*) UPOV TG/13/10
Period	2015

Origin and Breeding

Controlled pollination: After a cross was made between two own parents, a number of F1 plants were self pollinated. From the second until the sixth generation, pedigree selection was performed. From the seventh until the ninth generation, line selection was performed. Selection was directed at the following characters: Leaf shape, leaf colour, bolting resistance and resistance to *Bremia lactucae*. Breeder: Nunhems B.V., Haelen, The Netherlands.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Details of Application	
Application Number	2014/104
Variety Name	'FLOMANPIW'
Genus Species	*Mandevilla sanderi*
Common Name	Mandevilla
Synonym	Pink Wink
Accepted Date	03 Jul 2014
Applicant	Floreta Intellectual Property Pty Ltd., Capalaba, QLD
Agent	Kerry Bunker, Floreta Intellectual Property Pty Ltd., Redland Bay, QLD
Qualified Person	Kerry Bunker

Details of Comparative Trial	
Location	191 Gordon Road, Redland Bay, Queensland, Australia
Descriptor	*Mandevilla* UPOV TG/298/1
Period	Sep 2014 to Nov 2015
Conditions	Full sun with overhead automatic irrigation. Plants were potted into 140 mm containers using soilless media and 6 months slow release fertiliser. In April 2015, plants were then trimmed and top dressed with 6 months slow release fertiliser at the recommended rate.
Trial Design	Single randomised block containing 15 plants of each of the candidate variety and the nearest varieties of common knowledge (VCK).
Measurements	The data taken reflects the characteristics of the candidate variety and how it differs from the most similar varieties of common knowledge.
RHS Chart - edition	2007

Origin and Breeding

Open Pollination: One hundred plants of 'SUNMANDECRIM' (syn. crimson fantasy) and 'SUNMANDETOMI' (syn. petite pink fantasy) were placed in isolation in an open production bed in January 2009, seed pods resulting from open pollination were collected and seed sown in September 2009, seedlings were pricked out October 2009 and held in tubes until potting to 140 mm pots in August 2010. The variety FLOMANPIW (syn. Pink Wink, breeders code FLOMAN11-007) was selected February 2011 for its magenta flower colour and compact plant habit. Breeder: Dr K. V. Bunker, Redland Bay, QLD.

Description: **Kerry Bunker**, Redland Bay, QLD.

Details of Application	
Application Number	2014/107
Variety Name	'FLOMANWHW'
Genus Species	*Mandevilla sanderi*
Common Name	Mandevilla
Synonym	White Wedding
Accepted Date	03 July 2014
Applicant	Floreta Intellectual Property Pty Ltd., Capalaba, QLD
Agent	Kerry Bunker, Redland Bay, QLD
Qualified Person	Kerry Bunker

Details of Comparative Trial	
Location	191 Gordon Road, Redland Bay, QLD
Descriptor	*Mandevilla* UPOV TG/298/1
Period	Sep 2014 to Nov2015
Conditions	Full sun with overhead automatic irrigation. Plants were potted into 140 mm containers using soilless media and 6 months slow release fertiliser. In April 2015 plants were then trimmed and top dressed with 6 months slow release fertiliser at the recommended rate.
Trial Design	Single randomised block containing 15 plants of each of the candidate variety and the nearest varieties of common knowledge (VCK).
Measurements	Data were taken randomly selected plant from the trial.
RHS Chart - edition	2007

Origin and Breeding

Open Pollination: In October 2012, plants of 'FLOMAN 11-40' and 'My Fair Lady' were placed in isolation in the greenhouse facility. Seed pods were harvested from 'FLOMAN 11-040' in January 2012 and the seed sown. All germinated seedlings were potted into 140 mm containers in July 2012 and grown to maturity. The variety 'FLOMANWHW' (Breeders Code FLOMAN 12-005) was selected on November 2012 due to the expression of a compact plant habit, small leaves and white flowers. Breeder: Kerry Bunker, Redland Bay, QLD.

Origin and Breeding

Open Pollination:100 plants of 'SUNMANDETOMI' (syn. Petite Pink Fantasy) and 'SUNMANDECRIM' (syn. Crimson Fantasy) were placed in isolation in an open production bed in January 2009, seed pods resulting from open pollination were collected and seed sown in September 2009, seedlings were pricked out October 2009 and potted to 140 mm pots December 2009. The variety FLOMANFOP (breeders code FLOMAN 10-009) was selected May 2010 for its pink flower colour and compact plant habit. Breeder: Dr K. V. Bunker, Redland Bay, QLD.

Description**:** **Kerry Bunker**, Redland Bay, QLD.

Details of Application	
Application Number	2014/315
Variety Name	'Crispy Pear'
Genus Species	*Cucumis melo*
Common Name	Melon
Synonym	Nil
Accepted Date	3 February 2015
Applicant	Nunhems B.V., Haelen, The Netherlands
Agent	Shelston IP, Sydney, NSW
Qualified Person	John Oates

Details of Comparative Trial	
Location	Yoogali, NSW
Descriptor	Melon *Cucumis melo* UPOV TG/104/15
Period	January – May 2015
Conditions	Field, sub-surface drip irrigation, red loam soil, some hail damage.
Trial Design	Approximately 700 plants space planted, will require second year trial two generations.
Measurements	fruit length and diameter, seed length and width.
RHS Chart - edition	2001

Origin and Breeding

Controlled pollination: Two homozygous Nunhems breeding lines were crossed in 2010. Selection criteria used for selecting the new variety are Smooth bright yellow skin, white flesh, very small closed cavity, high PSI and Brix. The new variety has maintained in its present form for at least three generations and no off types were observed. 'Crispy Pear' differs from its seed parent in having no creasing on fruit surface and from pollen parent in having thinner width of flesh in longitudinal section. Breeder: Nunhems B.V. Netherlands.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	**Context**	**State of Expression in Group of Varieties**
Fruit	ground colour of skin	yellow
Fruit	warts	present
Fruit	grooves	very weakly expressed
Fruit	cork formation	absent
Fruit	main colour of flesh	white to greenish whige
Seed	colour	cream yellow

Most Similar Varieties of Common Knowledge identified (VCK)

Description: **John Oates,** Pambula, NSW.

Details of Application	
Application Number	2015/012
Variety Name	'Taabinga'
Genus Species	*Arachis hypogaea*
Common Name	Peanut
Synonym	Nil
Accepted Date	5 March 2015
Applicant	Peanut Company of Australia Limited, Kingaroy, QLD ; Grains Research and Development Corporation Barton, ACT, Agri-Science Queensland, Department of Agriculture, Fisheries and Forestry, Brisbane, QLD.
Qualified Person	Graeme Wright
Details of Comparative Trial	
Location	A trial was conducted during the 2014/2015 season at the Qld Department of Agriculture, Kingaroy Research Station, Kingaroy, QLD.
Descriptor	Peanut, *Arachis hypogea,* UPOV TG 93/3
Period	December 2014 - May 2015
Conditions	The trial at Kingaroy Research Station was conducted under standard management practices, including irrigation to ensure optimal growth conditions.
Trial Design	120 plants of each of 5 cultivars (Taabinga- 2013; 'Taabinga' -2014; 'Redvale'; 'Tingoora'; 'Walter') in 4 replicates were planted in 2 x 5m rows at Kingaroy RS
Measurements	Physical characteristics, pod yield and grade were measured and analysed. Mature pods/kernels were harvested from each plot on 10 April 2015. Kernel lengths were measurements on 25 kernels per plot sample, only from 2-seeded pods which rode a 1/2" screen. Analysis of variance (ANOVA) on data conducted with Genstat Release 10.
RHS Chart - edition	
Origin and Breeding	

'P23-p153-63' is a $_{F4:5}$ line derived from a cross of 'Redvale' with 'D147-p3-115'. 'Redvale' (PBR Application No: 2013/033) was a high oleic, ultra early maturity variety, released by the QPIF-GRDC breeding program (also known as D193-p3-6 tan). 'D147-p3-115' was a high oleic, highly foliar disease tolerant breeding line and closely related to 'Sutherland' which was released by the developed the QPIF-GRDC breeding program. The (P23) cross was made in 2008-09 and F_1 seed grown out in a winter field nursery grown on a farmer's field near Gordonvale, N. QLD during 2009. In the following summer (2009-10) single F_2 plant selections were made on the basis of pod and kernel characteristics in breeding plots planted at the QDAFF Kingaroy Research Station. F_3 seed from those single plants was then planted as $F_{2:3}$ rows in a winter nursery on a farmer's field near Gordonvale in N. QLD in 2010. These rows were then further selected on the basis of high pod and kernel yield, high kernel %, pod and kernel characteristics and tolerance to leaf rust. Subsequently, $F_{2:4}$ single plants were grown out in the summer of 2010/11 at the QLD DAFF Bundaberg

Research Station in S. QLD under a limited fungicide spray program, and $F_{4:5}$ selections made for superior leaf spot and leaf rust tolerance, along with superior kernel yield and grade characters. A 2 site $F_{4:5}$ preliminary yield test was subsequently grown at the QLD DAFF Kingaroy and Redvale Research Stations in S. QLD in the summer of 2011/12. 'P23-p153-63' had very good yield and grade performance in these prelim trials, and was subsequently promoted to the ultra early maturity regional variety evaluation trials during 2012/13 and 2013/14. 'P23-p153-63' was found to have superior kernel yield, grade out and foliar disease tolerance compared to 'Redvale' and other ultra early maturity checks. The seed parent is characterised by erect plant growth habit producing medium sized kernels. The pollen parent produces pods with medium to deep constrictions and the colour of mature uncured testa is red. Original Breeder: Dr Graeme Wright.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Plant	growth habit	semi-erect
Plant	maturity	very early
Kernel	oleic acid content	high

Most Similar Varieties of Common Knowledge identified (VCK)

Name	Comments
'Red Vale'	high oleic acid, very early maturity, semi-erect habit
'Tingoora'	high oleic acid, very early maturity, semi-erect habit
'Walter'	high oleic acid very early maturity, prostrate habit

Description: **Graeme Wright,** Kingaroy, QLD.

Details of Application	
Application Number	2015/011
Variety Name	'Kairi'
Genus Species	*Arachis hypogaea*
Common Name	Peanut
Synonym	Nil
Accepted Date	5 March 2015
Applicant	Peanut Company of Australia Limited, Kingaroy, QLD ; Grains Research and Development Corporation Barton, ACT, Agri-Science Queensland, Department of Agriculture, Fisheries and Forestry, Brisbane, QLD.
Qualified Person	Graeme Wright
Details of Comparative Trial	
Location	Two trials were conducted during the 2014/2015 season, one at Bundaberg Research Station and the other at Kingaroy Research Station
Descriptor	Peanut, *Arachis hypogea,* UPOV TG 93/3
Period	December 2014 - May 2015
Conditions	The trial at Kingaroy Research Station was conducted under standard management practices, while the other trial at Kairi RS in N Qld was a foliar disease trial which was unsprayed throughout the entire crop life cycle.
Trial Design	120 plants of each of 5 cultivars (Kairi - 2013; Kairi -2014; Holt; Fisher; Middleton) in 3 replicates were planted in 2 x 5m rows at Kingaroy RS, and 60 plants of each of 4 cultivars (Kairi; Holt; Fisher; Middleton) in 4 replicates each of a single 5m row were planted at Kairi RS.
Measurements	Physical characteristics, pod yield and grade were measured and analysed. Mature pods/kernels were harvested from each plot on 11 May 2015 for Kingaroy trial. Pod and kernel lengths (25 measurements per plot sample, on 2-seeded pods which rode a 1/2" screen only). Analysis of variance (ANOVA) on data conducted with Genstat Release 10. Resistance to foliar disease pathogens (leaf rust) was also measured in each plot at the Kairi RS N Qld trial, using a 1-9 visual scale (ICRISAT), with 5 ratings per plot measured on 3 March 2015 with rust rating calculated and analysed using Genstat Release 10.
RHS Chart - edition	
Origin and Breeding	
Controlled pollination: 'D1075-p2-2' x 'Sutherland'. D281-p40-236A is a F_5:$_6$ line derived from a cross of 'D1075-p2-2' with 'Sutherland'. 'D107-5-p2-2' was a high oleic Virginia breeding line derived from a double backcross to Conder (PBR Application No: 1999/010), while 'Sutherland' (PBR Application No: 2006/066) was a high oleic, highly foliar disease tolerant variety, released by the developed the QPIF-GRDC breeding program (also known as 'D147-p3-6'). The (D281) cross was made	

in 2005-06 and F_1 seed grown out in a winter field nursery at the Qld DAFF Southedge Research Station in N. QLD in 2006. In the following winter (2007) on a farmer's field near Gordonvale, N. QLD, some single F_2 plant selections were made on the basis of pod and kernel characteristics. F_3 seed from those single plants was then planted as $F_{2:3}$ rows on a farmer's field near Bundaberg in S. QLD in 2007/08. These rows were then further selected on the basis of high pod and kernel yield, high kernel % and pod and kernel characteristics. Subsequently, F_2:$_4$ single plants were grown out in the summer of 2008/09 at the Qld DAFF Bundaberg Research Station in S. QLD under a limited fungicide spray program, and $F_{4:5}$ selections made for superior leaf spot and leaf rust tolerance, along with superior kernel yield and grade characters. A 2 site $F_{4:5}$ preliminary yield test was subsequently grown at the QLD DAFF Kingaroy and Bundaberg Research Stations in S. QLD in the summer of 2009/10. 'D281-p40-236' had very good yield and grade performance in these preliminary trials, however it showed significant variability in plant growth habit indicating late generation segregation for this (and potentially other) trait(s). At harvest time, a decision was made to re-select single plants from the 'D281-p40-236' line, with these reselections being named 'D281-p40-236A', B, C... and subsequently bulked up in a 2010 winter nursery in Gordonvale, N. QLD. These new lines were then tested over the following four years in full season maturity regional variety evaluation trials during 2010/11, 2011/12, 2012/13 and 2013/14. 'D281-p40-236A' named as 'Kairi' was found to have superior kernel yield, grade out and foliar disease tolerance compared to Holt and other full season maturity checks. The seed parent is characterised by erect plant growth habit producing medium sized kernels. The pollen parent produces pods with medium to deep constrictions and the colour of mature uncured testa is red. Original Breeder: Dr Graeme Wright.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Plant	growth habit	semi-erect

Description: **Graeme Wright,** Kingaroy, QLD.

Details of Application	
Application Number	2014/171
Variety Name	'Zapriclair'
Genus Species	*Alstroemeria* hybrid
Common Name	Peruvian Lily
Synonym	Nil
Accepted Date	20 Aug 2014
Applicant	Van Zanten Plants B. V. Rijsenhout, The Netherlands
Agent	Ramm Botanicals Holdings Pty Ltd, Kangy Angy NSW
Qualified Person	Megan Bartley
Details of Comparative Trial	
Location	Kangy Angy NSW
Descriptor	TG/29/7 Alstroemeria
Period	May - November 2015
Conditions	The trial was conducted to verify the CPVO test report conducted by Naktuinbouw at Roelofarendsveen, Holland. Comparator data was taken from descriptions published in the Plant Varieties Journal. Tissue cultured cuttings were supplied by Van Zanten Plants B. V. in May 2013. The Tissue cultured plants were planted into Ellagaard plugs under mist then potted to 140mm standard nursery pots in August. The plants were grown outdoors in the open. The light was natural. No additional light was given. Potting mix was a general-purpose type based on composted pine bark pH 5.9. Controlled release fertilizer only was used and no supplementary fertiliser was used. Overhead watering was used as necessary. Routine pest and disease sprays were carried out.
Trial Design	The trial was grown in a completely randomized design. The total number of plants in the trial was 10.
Measurements	All the observations were taken on 8 different flower stems. The measurements were taken in October, 2015. Data for 'Stapricamil' was taken from the description published in IP Australia Plant Varieties Journal Volume 17, Issue 1.
RHS Chart - edition	1995
Origin and Breeding	
Controlled pollination: crossing were performed in June 2008, to obtain seedling which are suitable to be commercialised as new pot *Alstroemeria* varieties, with uniform and stable characteristics (dwarf type, large white flowers). The seedling was first examined in August 2009; the first propagation took place in September 2009. Further asexual propagation by rhizome divisions in a controlled greenhouse and selections have shown the unique features of this new pot *Alstroemeria* variety are stable and reproduced true to type in successive generations. Crossing and selection took place in Rijsenhout, The Netherlands. Breeder: Van Zanten Plant B. V. Rijsenhout, The Netherlands.

Details of Comparative Trial	
Location	Upper Stowport, TAS
Descriptor	Potato, *Solanum tuberosum* UPOV TG/23/6
Period	December 2014 - May 2015
Conditions	Grown from hardened off tissue culture plantlets in red ferrosol soils under solid set irrigation with standard pest and disease control and a broardcast mix of 9:13:16 at approximately 1500kg/ha
Trial Design	RCBD with 3 replicates 3 rows wide with 20 plants per replicate
Measurements	Field data was collected on the 25 March 2015 using UPOV descriptions. Tubers were assessed on the 28 April 2015 and lightsprouts were assessed on the 21 October 2015.
Origin and Breeding	
Controlled pollination: 'Lemhi Russet' x 'Russet Nugget' - crossing and true seed production in the greenhouse at Texas A&M University, College Station Texas, 1992. Produce seedling tubers from true seed in the greenhouse at College Station, Texas in 1993. 70,000-80,000 seedling tubers planted in the field as single hills. Several thousand tubers are obtained from other breeding programs. Initial selection of this material takes place at harvest. TC16765-1RU initially selected at the San Luis Valley Research Center, Colorado, USA in 1994. Twelve-hills of each single-hill selection are planted. Second cycle of field selection - 1995. Preliminary Selections 1 (P1). Third cycle of field selection (48 plant tuber-unit seed increase) - 1996. Preliminary Selections 2 (P2). Fourth cycle of field selection (96 plant tuber-unit seed increase). Initial evaluations to characterize selections for blackspot bruise potential, storage weight loss, dormancy, and enzymatic browning. Initial evaluations for french fry potential (french fry color and specific gravity) are conducted this year and subsequently - 1997 on. Intermediate Selections. Fifth cycle of field selection. Initial data collected on yield, grade, and growth characteristics. Plant a 144 plant tuber-unit seed increase and a 2 rep x 25 plants intermediate yield trial (IYT) - 1998. 8-9, 14+ TC1675-1RU was in the 6th-7th cycles of field selection in 1999-2000. All advanced yield trials (AYT) have 4 reps x 25 plants. Sixth- and seventh- year field selections respectively have a 400/1,600 plant tuber-unit seed increase. In 1999 TC1675-1RU was indexed for viruses and cleanup/micropropagation was initiated. Testing for ring rot and PLRV reaction was also initiated. TC1675-1RU was initially entered into	

cultural management trials and postharvest disease reaction (dry rot and soft rot) evaluations in 2000. 10 TC1675-1RU was entered in the 2001 Southwestern Regional Trials (4 locations - CO, TX, two in CA). 11-13 TC1675-1RU was entered in the Western Regional Trials in 2002-2004. The Western Regional Committee (WERA027) directs these trials at 10+ locations in the Western United States each year. 'Top Cat' differs from its seed parent in having light purple flower colour and reddish brown skin colour. It differs from the pollen parent in being late in maturity and having medium to strong flower bud anthocyanin colouration.Breeder: David G Holm, Colorado State University, USA.

Location	Waikerie, SA
Descriptor	Potato *Solanum tuberosum* UPOV TG/23/6
Period	March 2013 to October 2013
Conditions	Plantlets ex-quarantine raised from tissue cultures and planted into potting mix in 200mm diameter plastic pots on 26 March 2013. Pots placed on benches in a screened polythene clad greenhouse
Trial Design	Randomised complete block design. Two replicates of 30 plants per variety
Measurements	Observations taken of foliage characteristics on 5 June 2013. Plants did not flower and flower characteristics have been compared using published data. Tubers harvested on 13 June 2013 and recorded on 4 July 2013. Lightsprout data recorded and photographed on 20 October 2013.

Origin and Breeding

Controlled pollination: ‘Pompadour’ x (‘Ausonia x ‘Gloria’). The maternal parent 'Pompadour' was crossed in 1996 with an un-named breeding line derived from a cross between 'Ausonia' x 'Gloria'. 'Pompadour' was chosen as a parent because of very good cooking qualities and the hybrid breeding line was selected for earliness. Progeny of the cross were evaluated in 1998 and the breeding line '97.101.1' was trialled each year through to 2007. The line was released in 2010 as 'Esmeralda'. The seed parent has medium to later maturity and is susceptible to Golden nematode (*Globodera rostochiensis).* The pollen parent has long oval tuber shape. Breeder: Station de Recherche du Comite Nord, France.

Variety Name	'Pacific Royale'
Genus Species	*Rubus idaeus*
Common Name	Raspberry
Synonym	Nil
Accepted Date	20 Nov 2013
Applicant	Pacific Berry Breeding, L.L.C., Salinas, California, USA
Agent	Fisher Adams Kelly, Brisbane, QLD
Qualified Person	Margaret Zorin

Details of Comparative Trial	
Overseas Testing Authority	United State Patent and Trademark Office (USPTO)
Overseas Data Reference Number	PP21536
Location	Oxnard and Watsonville California USA and verified in Birkdale, QLD.
Descriptor	Raspberry (*Rubus idaeus*) TG/43/7
Period	2003-2009
Measurements	The following description of 'Pacific Royale'is taken from 18 month old plants in 2008 and is in accordance with UPOV terminology and guidelines. The colour designations, colour descriptions and other phenotypic descriptions may deviate from the stated values depending on variation in environmental, seasonal, climatic and cultural conditions. Colours are based on The Royal Horticultural Society of London (R.H.S.) Colour Charts.
RHS Chart - edition	2007

Origin and Breeding

Controlled Pollination: 'Pacific Royale' originated as a seedling from controlled cross pollination of two unknown breeding lines grown in Oxnard, California, USA. The present variety 'Pacific Royale' was selected in the field and moved to Watsonville, California for further evaluation and has been found to retain its distinctive characteristics through successive asexual propagations. Breeders: Thomas Amrhein and Mario Aguas of Naturipe Berry Growers Inc Salinas, California USA. Pacific Berry Breeding LLC Salinas, California US holds the rights to 'Pacific Royale'.

Description: **Margaret Zorin,** Birkdale, QLD.

Details of Application	
Application Number	2013/138
Variety Name	'Pacific Deluxe'
Genus Species	*Rubus idaeus*
Common Name	Raspberry
Accepted Date	31 July 2013
Applicant	Pacific Berry Breeding, L.L.C., Salinas, California
Agent	Fisher Adams Kelly, Brisbane, QLD
Qualified Person	Margaret Zorin
Details of Comparative Trial	
Overseas Testing Authority	United State Patent and Trademark Office (USPTO)
Overseas Data Reference Number	PP21074
Location	Oxnard and Watsonville, California, USA and verified in Birkdale, QLD.
Descriptor	Raspberry (*Rubus idaeus*) TG/43/7
Period	2004-2009
Trial Design	Replicated field trials with other raspberry lines.
Measurements	The following description of 'Pacific Deluxe' is based on observations taken from 18 month old plants growing in Watsonville, California USA in 2008. This description is in accordance with UPOV terminology and guidelines. Colour designation, colour descriptions and other phenotypic descriptions may deviate from the stated values and descriptions depending on variation in environmental, seasonal, climatic and cultural conditions. Colours are based on The Royal Horticultural Society of London Charts.
RHS Chart - edition	2007
Origin and Breeding	
Controlled Pollination: 'Pacific Deluxe' originated as a seedling from cross pollination of two breeding linns grown in Oxnard, California USA. The present variety 'Pacific Deluxe' was selected in the field and moved to Watsonville for further evaluation and has been found to retain its distinctive characteristics through successive asexual propagations. Breeders: Mario Aguas, and Thomas Amrhein (California) and Jose Lopez Medina (Mexico). Pacific Berry Breeding LLC Salinas, California, USA holds the rights to 'Pacific Deluxe'.

Description: **Margaret Zorin,** Birkdale, QLD.

Details of Application	
Application Number	2015/121
Variety Name	'N1MR09'
Genus Species	*Morella rubra*
Common Name	Red Bayberry
Synonym	Nil
Accepted Date	31 Aug 2015
Applicant	The University of Queensland, St Lucia QLD.
Agent	Plant Varieties Australia Limited, Silvan, VIC.
Qualified Person	Charlotte Brunt
Details of Comparative Trial	
Location	Silvan, VIC.
Descriptor	PBR MORE Red Bayberry (*Morella rubra*)
Period	Planted May 2013; data collection for trial finalised in January 2016
Conditions	Plants were freestanding and grown in-ground in an open field. Plant spacing was 2m apart in a row, rows were 4 m wide (1250 plants per ha). Shrubs were skirt pruned in February each year. Weedspray was applied twice per year – Basta in Spring and Fusilade in Autumn. NPK compound fertiliser was applied at 300kg/ha or 300g plant equivalent. No fungicides or insecticides were applied. Plants were irrigated at 6.75 l/per plant per week (3 x 1.5 hrs x 3 litres/metre/hr.
Trial Design	10 plants of each cultivar were planted in randomised complete block trial.
Measurements	All observations determined by measurements, weighing or counting were made on 10 plants with replication. The level of replication for each plant varied with the character in under study.
RHS Chart - edition	Not applicable
Origin and Breeding	
Open pollination: Vegetatively propagated progeny of 12 red bayberry seedling plants were brought to Queensland by Daryl Joyce in 2003 and maintained in pots in a shade house at the University of Queensland, Gatton Campus. In September 2005 one tree of each genotype was planted-out at Maroochy Research Station. Fruiting was first observed in late 2007 with peak production occurring in early November. The male to female ratio was 1:1 (6 trees of each sex). Female genotypes exhibiting good yield and fruit quality were clonally propagated (by cuttings or by grafting onto seedling rootstock) and planted at multiple trial sites along the east coast of Australia (Atherton, Yeppoon, Wamuran, Corindi, Tumbarumba and Silvan). Fruit quality (weight, diameter, TSS, TA) was assessed in 2013 for fruit from the Corindi and Silvan trial sites (data presented in latest RIRDC report, Pilot production and sales of red bayberry in Australia). In 2014, fruit quality assessments were conducted on fruit	

from Corindi, Yeppoon and Silvan. Breeder name: Daryl Joyce, University of Queensland.

Details of Application	
Application Number	2014/014
Variety Name	'SER-Wish'
Genus Species	*Salvia* hybrid
Common Name	Sage
Synonym	Love and Wishes
Accepted Date	04 Mar 2014
Applicant	John Fisher, Orange, NSW
Agent	Plants Management Australia Pty. Ltd., Dodges Ferry, TAS
Qualified Person	Steve Eggleton
Details of Comparative Trial	
Location	Wonga Park, Victoria
Descriptor	PBR SALV Salvia (Salvia)
Period	14 Jan 15 to 15 Oct 15
Conditions	Trial conducted in the open, plants propagated from cuttings, transferred from tubes to 140 mm pots in January 2015. Pots filled with soilless, pinebark based mix with controlled release fertilizers. Appropriate pest and disease treatments were applied as required.
Trial Design	Twelve pots of each variety in a completely randomised design
Measurements	From ten plants randomly selected
RHS Chart - edition	2007
Origin and Breeding	
Controlled Pollination: In April 2012 a number of crosses were made between maternal parental lines identified as #84, #103, #104 and #153 of breeders own selections (not for commercial release) with *Saliva buchananii* as the male parent. Seeds were germinated in September 2012 and maintained in pots until November 2012 when they were planted out. Flower colour was observed in February 2013 and the 7 plants grown from the #104 x S. *buchananii* were identified as having a distinct deep purple flower colour. All selections were assessed to be uniform and stable having identical characteristics as one another. They were then used as source material for a further generation for evaluation. Final selection criteria: plant habit bushy to spreading and flower colour deep purple. All subsequent generations have proven to be distinct and uniform. Breeder: John Fisher, Orange, NSW.

Application Number	2014/235
Variety Name	'Calisteo'
Genus Species	*Spinacia oleracea*
Common Name	Spinach
Synonym	Callisto
Accepted Date	07 Nov 2014
Applicant	Nunhems B.V., Haelen, The Netherlands
Agent	Shelston IP, Margaret Street, NSW
Qualified Person	John Oates

Details of Comparative Trial	
Overseas Testing Authority	Naktuinbouw, The Netherland
Overseas Data Reference Number	SPN640
Location	Naktuinbouw, Roelofarendsveen, The Netherlands
Descriptor	*Spinacea oleraceae* UPOV TG/55/7
Period	2014

Origin and Breeding

Controlled pollination: 'CALISTEO' is a hybrid variety produced from a cross between two Nunhems B.V. breeding lines. The female parent was selected for resistance and delayed male flowering. The male parent was selected for resistance and dark leaf colour. The selected line has improved resistance to *Peronospora farinosa* f. *spinaciae* compared to the two parents. Breeder: Nunhems B.V., Haelen, The Netherlands.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Plant	red colouration of stem, petioles and veins	present
Leaf Blade	intensity of green colour	dark
Leaf Blade	blistering	weak
Flowering Plants	proportion of monoecious plants	high to very high
Flowering Plants	proportion of female plants	low to very low
Flowering plants	proportion of male plants	absent or very low
Plant	time of start of bolting (15%) plants	late to very late
Plant	resistance to race Pfs: 6	present
Plant	resistance race Pfs: 5	present
Plant	resistance race Pfs: 7	present

Description: **John Oates**, Merimbula, NSW.

Details of Application	
Application Number	2014/167
Variety Name	'Lompet1'
Genus Species	*Lomandra longifolia*
Common Name	Spiny Headed Mat Rush
Synonym	Nil
Accepted Date	04 Sep 2014
Applicant	Janet Lynne Petty, Katoomba, NSW
Agent	Ramm Botanicals Holdings Pty Ltd
Qualified Person	Megan Bartley

Details of Comparative Trial	
Location	Kangy Angy, NSW
Descriptor	TG/287/1 LOMANDRA (*Lomandra*)
Period	July 2013 October 2015
Conditions	Tissue culture derived plants of the Candidate and comparators were potted into 140mm standard black plastic pots. 5g of Osmocote Exact standard was added to the surface of the pot at planting. Plants were transferred to a trial garden bed and grown on to maturity. No supplementary fertiliser was used. Plants were grown in the open in full sun. No significant pest or disease was encountered during the trial.
Trial Design	15 plants each of the candidate and comparators were grown alongside each other in a trial garden bed.
Measurements	Observations were taken from 10 randomly selected plants.
RHS Chart - edition	1995

Origin and Breeding

Open pollination: 'Lompet1' was developed as part of a conventional breeding program for *Lomandra* suited to garden and landscape use conducted at Katoomba, NSW. Observations were first made in 2007 and further trial work was carried out at Kangy Angy, NSW. Crossing was carried out in the Spring of 2006. Plants of the selected breeding line were grown in the open and allowed to be pollinated by insects. In December 2007, two plants were selected due to the much narrower foliage and smaller plant height. 'Lompet1' was selected for development on the basis of the upright, elegant growth habit and its ability to perform well in a variety of soil types and climatic zones. Propagated by tissue culture through more than 10 generations and breeders reference PC09-0006. Breeder: Janet Lynne Petty, Katoomba, NSW.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	**Context**	**State of Expression in Group of Varieties**
Plant	habit	upright to semi upright
Leaf blade	width	narrow
Leaf	glaucosity of upper side	weak
Leaf	main colour of upper side	green
Leaf	secondary colour of upper side	absent

APPLICATIONS WITHDRAWN

The following varieties are no longer under PBR provisional protection

App. No.	*Genus*	*Species*	Common Name	Variety
2013/054	*Acacia*	*saligna*	Blue Leaf Wattle	Green Mulch
2015/261	*Fragaria*	x ananassa	Strawberry	Victory
2015/262	*Fragaria*	x ananassa	Strawberry	Liberty
2014/311	*Solanum*	lycopersicum	Tomato	Collider
2014/213	*Lavandula*	*dentata*	English Lavender	Blanc Dentelle
2014/084	*Lactuca*	*sativa*	Lettuce	Lustrel
2012/296	*Macropidia*	*fuliginosa*	Black Kangaroo Paw	Rambonight
2015/038	*Ozothamnus*	hybrid	Riceflower	Cosmic
2013/028	*Anigozanthos*	hybrid	Kangaroo Paw	Rambotation
2013/027	*Anigozanthos*	hybrid	Kangaroo Paw	Rambofling
2013/025	*Anigozanthos*	hybrid	Kangaroo Paw	Rambotasy

Grants Surrendered

App. No.	*Genus*	*Species*	Variety	Synonym	Common Name
2004/008	*Brassica*	napus	Tranby		Canola

Grants Expired

The following varieties are no longer under PBR protection:

App. No.	*Genus*	*Species*	Common Name	Variety
1992/062	*Desmanthus*	*virgatus*	Desmanthus	Marc
1993/109	Dieffenbachia	hybrid	Dumb Cane	TS 8567
1994/135	*Leptospermum*	rotundifolium x spectabile	Tea Tree	Rhiannon
1991/118	*Dieffenbachia*	hybrid	Dumb Cane	Golden Sunset
1994/125	*Microlaena*	*stipoides*	Weeping Grass	Wakefield
1994/124	*Microlaena*	*stipoides*	Weeping Grass	Shannon
1993/271	*Nandina*	*domestica*	Heavenly Bamboo	Gulf Stream

GRANTS REVOKED

The following varieties are no longer under PBR protection

App No.	*Genus*	*Species*	Variety	Synonym	Common Name
1997/225	*Agonis*	*flexuosa*	Jervis Bay Afterdark		Willow Myrtle
2007/288	*Brassica*	*napus*	Tawriffic TT		Canola
2011/218	*Osteospermum*	*ecklonis*	KLEOE10179		Cape Daisy
2011/219	*Osteospermum*	*ecklonis*	KLEOE10180		Cape Daisy

CORRIGENDA

PRUNUS – INTERSPECIFIC PLUM
Prunus salicina hybrid

'Yellowsweet II'
Application No: 2013/264

The claim of distinctness on flower diameter has been removed from the published descriptions in PVJ 27.4 (page 210) because the distinctness was inadvertently published.

Triticum aestivum
WHEAT

'Mitch'
Application no: 2014/119

The Origin and Breeding section of the detailed description published in PVJ 28.1 should read as follows:

Origin and Breeding

Controlled pollination: A simple cross of 29IBWSN112 (QT10422) to Giles was made in 2002 at Leslie Research Centre (LRC), Toowoomba. Doubled haploids were produced from this cross. Seeds were increased at LRC birdcage in 2003. It was screened for leaf and stem rust seedling resistance in Cobbitty and agronomic performance in Wellcamp in 2004. From 2005 to 2008, QT14381 was evaluated for grain yield, milling quality, rust resistance, root lesion nematode (*P. thornei*) tolerance by DAFFQ team. After AGT licensed DAFFQ wheat germplasm, QT14381 were evaluated for grain yield, disease resistance and quality from 2010 to 2014 in AGT nurseries across NSW, QLD, VIC, SA and WA. In 2011-2014 QT14381 was entered into NVT trials. Breeder: Dr Phillip Banks & Mr John Sheppard (QDPI), and, Dr Meiqin Lu & Mr Thomas Kapcejevs (AGT).

Lepidosperma squamatum

'LEP08'
Application No: 2015/147

The botanical name was inadvertently published as *Lepidosperma squamata* in the public notice for Acceptance published in PVJ 28.2. The correct botanical name should be *Lepidosperma squamatum.*

Australian Government
IP Australia

Part 3 Appendices

The appendices to *Plant Varieties Journal* **(Vol. 28 Issue 4)** are listed below:

Appendix -1 –Fees

This page sets out the PBR fees associated with applications, examination, certificates, annual and Qualified Person accreditation fees. Please note upcoming changes to fees. For more information please read our news article on the Fee Review Update.

PBR fees are subject to change. GST does not apply to these statutory fees under Division 81 of the *GST Act 1999*.

New Application

The Application Fee must accompany the Part 1 application at the time of lodgement. It covers an initial 'examination for acceptance', the issue of a letter of acceptance and provisional protection.

Fee Item/Action	**from 1 October 2012 Fee**	
	Approved Means	By Another Means
PBR Application	$345	$445

Examination

Applicants have twelve months from the date of acceptance to pay the Lodgement of the Detailed Description Fee (commonly referred to as the “Examination Fee”). The time limit to pay examination fees on imported varieties can be deferred for a maximum of 12 months after the variety has been released from quarantine - contact the PBR Office for further details.

The “Examination Fee” pays for the assessment of the description, the publication of the description and photograph of the new variety in Plant Varieties Journal, the field examination (if any), and any other enquiries necessary to establish eligibility for PBR. examination of the application, including field examination and publication of the description and photograph, will not commence until the Examination Fee has been received.

After the description has been published, successful applicants will be asked to pay the Certificate Fee. This covers the final examination of all details, the production of a certificate and copy of the variety’s description in the PBR Register.

Fee Item/Action	**from 1 July 2012 Fee**
Examination - Single Application	$1610
Examination - Application based on overseas test data	$1610

Examination - multiple application rate applicable only when 2 or more varieties of the same species tested at the same site in Australia and when applications and descriptions are lodged simultaneously by the same applicant and QP and examined simultaneously (fee for each variety)	$1380
Examination - at an authorised Centralised Testing Centre when 5 or more candidate varieties of the same genus are tested simultaneously (fee for each variety)	$920
Certificate	$345

Annual Fee

An Annual Maintenance Fee (sometimes called the Annual or Renewal Fee) is payable each year on the anniversary of the granting of the right. The Annual Maintenance Fee must be paid to maintain the grant.

Fee Item/Action	**from 1 July 2012 Fee**	
	Approved Means	By Another Means
Annual Fee	$345	$395

Qualified Person

Fee Item/Action	**from 1 July 2012 Fee**
Application for Accreditation as a Qualified Person	$50
Renewal of Qualified Person Accreditation (each year)	$50

Appendix 2

Plant Breeder's Rights Advisory Committee (PBRAC)
(PBRAC is established by section 63 of the *Plant Breeder's Rights Act 1994*)

- **Chair -** Mr Doug Waterhouse – Chief of Plant Breeder's Rights
- **Member with Appropriate Qualifications -** Professor Andrew Christie
- **Member Representing Users -** Ms Helen Dalton
- **Member Representing Conservation Interests -** Ms Marnie Ireland
- **Member Representing Consumers -** Mr Mark McKay
- **Member Representing Plant Breeders -** Mr Christopher Prescott
- **Member Representing Plant Breeders -** Mr Grant Wilson
- **Member with Appropriate Qualifications -** Dr Roslyn Prinsley
- **Member Representing Indigenous Interests -** Appointment process currently underway

For more information on PBRAC members http://www.ipaustralia.gov.au/about-us/regulatory-and-advisory-bodies/pbrac/pbrac-members/

APPENDIX 3 - INDEX OF ACCREDITED CONSULTANT 'QUALIFIED PERSONS'

The following persons have been accredited by the PBR office based on information provided by these persons. From the information provided by the applicants, the PBR office believes that these people can fulfil the role of 'qualified person' in the application for plant breeder's rights. Neither accreditation nor publication of a name in the list of persons is an implicit recommendation of the person so listed. The PBR office cannot be held liable for damages that may arise from the omission or inclusion of a person's name in the list nor does it assume any responsibility for losses or damages arising from agreements entered into between applicants and any person in the list of accredited persons. Qualified persons charge a fee for services rendered.

A guide to the use of the index of consultants:

- locate in the left column of Table 1 the plant group for which you are applying;
- listed in the right column are the names of accredited qualified persons from which you can choose a consultant;
- in Table 2 find that consultant's name, telephone number and area in which they are willing to consult (they may consult outside the nominated area);
- using the "Nomination of Qualified Person" form as a guide, agree provisionally on the scope and terms of the consultancy; complete the form and attach it to Part 1 of the application form;
- when you are notified that your nomination of a consultant qualified person is acceptable in the letter of acceptance of your application for PBR you should again consult the qualified person when planning the rest of the application for PBR.

TABLE 1

PLANT GROUP/SPECIES/FAMILY	CONSULTANT'S NAME (TELEPHONE AND AREA IN TABLE 2)
Actinidia	Lye, Colin Paananen, Ian
Agapanthus	Paananen, Ian
Almonds	Cottrell, Matthew Edwards, Arthur McClintlock, Rachael Pettigrew, Stuart Swinburn, Garth
Alstroemeria	Paananen, Ian
Ajuga	Paananen, Ian
Apple	Buchanan, Peter Cramond, Gregory Fleming, Graham Langford, Garry Mackay, Alastair Malone, Michael Mitchell, Leslie Paananen, Ian Pettigrew, Stuart Tancred, Stephen

Anigozanthos	Paananen, Ian Kirby, Greg Smith, Daniel
Anthurium	Paananen, Ian
Aroid	Harrison, Peter
Avocado	Chislett, Susan Cottrell, Matthew Lye, Colin Edwards, Arthur MacGregor, Alison Owen-Turner, John Paananen, Ian Parr, Wayne Swinburn, Garth Whiley, Tony
Azalea	Hempel, Maciej Paananen, Ian
Barley (Common)	Collins, David Downes, Ross Saunders, James
Berry Fruit	Brevis-Acuna, Patricio Fleming, Graham Pettigrew, Stuart Zorin, Margaret
Blackberry	Brevis-Acuna, Patricio Paananen, Ian
Blandfordia	Treverrow, Florence
Blueberry	Brevis-Acuna, Patricio Paananen, Ian Scalzo, Jessica Zorin, Margaret
Bougainvillea	Iredell, Janet Willa Prince, John
Brachyscome	Paananen, Ian
Brassica	Christie, Michael Cooper, Kath Downes, Ross Easton, Andrew Fennell, John Gororo, Nelson Kadkol, Gururaj O'Connell Peter Paananen, Ian Saunders, James Watson, Brigid

Brunia	Dunstone, Bob
Buddleia	Robb, John Paananen, Ian
Buffalo Grass	Paananen, Ian
Calibrachoa	Paananen, Ian
Callistemon	Parsons, Rodney
Capsicum	Zorin, Margaret
Camellia	Paananen, Ian Robb, John
Cannabis (low THC varieties only and subject to holding a current licence from the appropriate authority)	Warner, Philip
Carnation/Dianthus	Paananen, Ian
Cereals	Bullen, Kenneth Christie, Michael Collins, David Cook, Bruce Cooper, Kath Downes, Ross Fennell, John Hare, Raymond Harrison, Peter Henry, Robert J Madsen, Dean Mitchell, Leslie Moore, Stephen Oates, John Paananen, Ian Roake, Jeremy Rose, John Sadeque, Abdus Saunders, James Siedel, John Watson, Brigid
Cherry	Cramond, Gregory Fleming, Graham Mackay, Alastair Mitchell, Leslie
Chickpeas	Downes, Ross Collins, David Paananen, Ian Saunders, James
Chinese Elm	Fennell, John

Chrysanthemum	Paananen, Ian
Citrus	Calabria, Patrick Chislett, Susan Cottrell, Matthew Edwards, Arthur Lee, Slade MacGregor, Alison Mitchell, Leslie Owen-Turner, John Paananen, Ian Parr, Wayne Pettigrew, Stuart Strange, Pamela Swinburn, Garth Topp, Bruce
Clivia	Paananen, Ian Smith, Kenneth
Clover	Downes, Ross James, Jennifer Lake, Andrew Lin, Joy Mitchell, Leslie Paananen, Ian Saunders, James Watson, Brigid
Cordyline	Warren, Andrew
Cucurbits	Christie, Michael Herrington, Mark O'Connell Peter Paananen, Ian
Cynodon	Hudner, Darra
Dianella	Paananen, Ian Watkinson, Andrew
Dogwood	Fleming, Graham
Echinacea	Paananen, Ian
Eremophila	Parsons, Rodney
Eucalyptus	Paananen, Ian
Euphorbia	Paananen, Ian
Feijoa	Parr, Wayne
Fibre Crops	Gillespie, David

Fig	Cottrell, Matthew Fleming, Graham Paananen, Ian Parr, Wayne
Forage Brassicas	Saunders, James
Forage Grasses	Downes, Ross Fennell, John Harrison, Peter Kirby, Greg Mitchell, Leslie Paananen, Ian Watson, Brigid
Forage Legumes	Downes, Ross Fennell, John Harrison, Peter Hill, Jeff Howie, Jake James, Jennifer Lake, Andrew Lin, Joy Saunders, James Siedel, John
Fruit	Brown, Gordon Chislett, Susan Christie, Michael Cramond, Gregory Cottrell, Matthew Delaporte, Kate Fleming, Graham Gillespie, David Lenoir, Roland Mitchell, Leslie Paananen, Ian Parr, Wayne Pettigrew, Stuart Trimboli, Dan
Fuchsia	Paananen, Ian
Gerbera	Paananen, Ian
Ginger	Smith, Mike Whiley, Tony

Grape	Cottrell, Matthew Delaporte, Kate Edwards, Arthur Fleming, Graham Hashim-Maguire, Jennifer Lye, Colin MacGregor, Alison McClintlock, Rachael Mitchell, Leslie Paananen, Ian Parr, Wayne Pettigrew, Stuart Smith, Daniel Strange, Pamela Swinburn, Garth Zorin, Margaret
Grevillea	Dunstone, Bob Herrington, Mark Paananen, Ian Parsons, Rodney
Gypsophila	Paananen, Ian
Hardenbergia	Dunstone, Bob
Hops	Paananen, Ian
Hydrangea	Hanger, Brian Paananen, Ian
Impatiens	Paananen, Ian
Jojoba	Dunstone, Bob
Kalanchoe	Paananen, Ian
Kiwifruit	Warren, Andrew
Lavender	Paananen, Ian
Legumes	Christie, Michael Collins, David Cook, Bruce Cruickshank, Alan Downes, Ross Harrison, Peter Kadkol, Gururaj Kirby, Greg Lake, Andrew Loch, Don Mitchell, Leslie Paananen, Ian Rose, John Saunders, James Siedel, John

Lentils	Collins, David Downes, Ross Saunders, James
Leucaena	Roche, Matthew
Lilium	Paananen, Ian
Liriope	Paananen, Ian
Lettuce	Christie, Michael O'Connell, Peter
Leptospermum	Warren, Andrew
Lomandra	Paananen, Ian
Lucerne	Downes, Ross Lake, Andrew Mitchell, Leslie Saunders, James
Lupin	Collins, David Saunders, James
Macadamia	Hockings, David Paananen, Ian
Magnolia	Paananen, Ian
Mandevilla	Paananen, Ian
Mango	Lye, Colin Owen-Turner, John Mitchell, Leslie Paananen, Ian Parr, Wayne Whiley, Tony
Metrosideros	Roche, Matthew
Mushrooms, edible	Paananen, Ian Wong, Percy
Myrtaceae	Dunstone, Bob Paananen, Ian
Myrtus	Buchanan, Peter
Native grasses	Paananen, Ian Quinn, Patrick
Oat	Collins, David Downes, Ross Madsen, Dean Saunders, James

Oilseed crops	Christie, Michael Downes, Ross Madsen, Dean Oates, John Paananen, Ian Saunders, James Siedel, John
Olives	Edwards, Arthur Lunghusen, Mark Paananen, Ian Pettigrew, Stuart
Onions	Fennell, John O'Connell Peter Paananen, Ian
Ornamentals - Exotic	Abell, Peter Armitage, Paul Angus, Tim Christie, Michael Collins, Ian Delaporte, Kate Eggleton, Steve Fisk, Anne Marie Fleming, Graham Guy, Gareme Harrison, Dion Harrison, Peter Hempel, Maciej Hockings, David Lenoir, Roland Loch, Don Lunghusen, Mark Mackinnon, Amanda Mitchell, Hamish Mitchell, Leslie Oates, John O'Brien, Shaun Paananen, Ian Prescott, Chris Prince, John Robb, John Singh, Deo Stewart, Angus Watkins, Phillip Watkinson, Andrew

Ornamentals - Indigenous	Abell, Peter Angus, Tim Christie, Michael Delaporte, Kate Downes, Ross Eggleton, Steve Harrison, Dion Harrison, Peter Henry, Robert J Hockings, David Jack, Brian Kirby, Greg Lee, Slade Lenoir, Roland Loch, Don Lowe, Greg Lunghusen, Mark Mackinnon, Amanda Mitchell, Hamish Molyneux, W M Oates, John O'Brien, Shaun Paananen, Ian Prince, John Singh, Deo Slater, Tony Stewart, Angus Watkins, Phillip
Osmanthus	Paananen, Ian Robb, John
Osteospermum	Paananen, Ian
Pastures & Turf	Cameron, Stephen Christie, Michael Cook, Bruce Downes, Ross Fennell, John Harrison, Peter Kadkol, Gururaj Kirby, Greg James, Jennifer Lin, Joy Loch, Don Madsen, Dean McMaugh, Peter Mitchell, Leslie Oates, John Paananen, Ian Roche, Matthew Rose, John Saunders, James Sewell, James Smith, Raymond Zorin, Margaret

Peanut	Cruickshank, Alan
Pear	Cramond, Gregory Fleming, Graham Langford, Garry Mackay, Alastair Malone, Michael Paananen, Ian Tancred, Stephen
Pelargonium	Paananen, Ian
Persimmon	Edwards, Arthur Paananen, Ian Parr, Wayne Swinburn, Garth
Petunia	Paananen, Ian
Philodendron	Paananen, Ian
Philotheca	Dunstone, Bob
Phormium	Paananen, Ian Warren, Andrew
Photinia	Paananen, Ian Robb, John
Pistacia	Chislett, Susan Cottrell, Matthew Paananen, Ian Pettigrew, Stuart Richardson, Clive
Pisum	Downes, Ross Saunders, James
Pomegranate	Paananen, Ian Pettigrew, Stuart
Potatoes	Delaporte, Kate Fennell, John Friemond, Terry Hill, Jim Lochert, Liteisha McKay, Stewart O'Connell Peter Paananen, Ian Saunders, James Slater, Tony Wharmby, Emma
Proteaceae	Paananen, Ian Robb, John

Prunus	Buchanan, Peter Calabria, Patrick Cottrell, Matthew Cramond, Gregory Fleming, Graham Mackay, Alastair Malone, Michael Paananen, Ian Topp, Bruce Witherspoon, Jennifer
Pulse Crops	Christie, Michael Collins, David Downes, Ross Oates, John Paananen, Ian Sadeque, Abdus Saunders, James
Raspberry	Brevis-Acuna, Patricio Fleming, Graham Herrington, Mark Paananen, Ian Zorin, Margaret
Rhododendron	Paananen, Ian
Rose	Delaporte, Kate Fleming, Graham Hanger, Brian Lee, Peter McKirdy, Simon Paananen, Ian Prescott, Chris Swane, Geoff Syrus, A Kim
Sandersonia	Warren, Andrew
Scaevola	Paananen, Ian
Sesame	Harrison, Peter
Soybean	Christie, Michael Harrison, Peter James, Andrew Paananen, Ian
Spathiphylum	Paananen, Ian

Stone Fruit	Chislett, Susan Cottrell, Matthew Cramond, Gregory Fleming, Graham MacGregor, Alison Mackay, Alistair Malone, Michael Paananen, Ian Pettigrew, Stuart Swinburn, Garth
Strawberry	Brevis-Acuna, Patricio Herrington, Mark Kadkol, Gururaj Mitchell, Leslie Oates, John Zorin, Margaret
Sugarcane	Christie, Michael Cox, Mike Paananen, Ian Piperidis, George
Tomato	Christie, Michael Herrington, Mark O'Connell Peter Paananen, Ian
Tree Crops	Hockings, David Paananen, Ian
Triticale	Downes, Ross Collins, David Cooper, Kath Saunders, James
Tropical/Sub-Tropical Crops	Fittler, Michael Harrison, Peter Hockings, David Parr, Wayne Whiley, Tony
Umbrella Tree	Paananen, Ian

Vegetables	Christie, Michael Delaporte, Kate Fennell, John Frkovic, Edward Harrison, Peter Gillespie, David Lenoir, Roland MacGregor, Alison Morley, Ken Oates, John Paananen, Ian Pearson, Craig Pettigrew, Stuart Trimboli, Dan Westra Van Holthe, Jan
Verbena	Paananen, Ian
Walnut	Cottrell, Matthew Mitchell, Leslie Paananen, Ian
Wheat (Aestivum & Durum Groups)	Christie, Michael Collins, David Downes, Ross Fittler, Michael Kadkol, Gururaj Paananen, Ian Saunders, James
Zantedeschia	Paananen, Ian Warren, Andrew
Zoysia	Hudner, Darra

List of Addresses of Plant Variety Protection Offices in UPOV Member States

Status of Ratification in UPOV member States is available from UPOV website.

APPENDIX 6

CENTRALISED TESTING CENTRES

Under Plant Breeder's Rights Regulations introduced in 1996, establishments may be officially authorised by the PBR office to conduct test growings. An authorised establishment will be known as Centralised Test Centre (CTC).

Usually, the implementation of PBR in Australia relies on a 'breeder testing' system in which the applicant, in conjunction with a nominated Qualified Person (QP), establishes, conducts and reports a comparative trial. More often than not, trials by several breeders are being conducted concurrently at different sites. This makes valid comparisons difficult and often results in costly duplication.

While the current system is and will remain satisfactory, other optional testing methods are now available which will add flexibility to the PBR process.

Centralised Testing is one such optional system. It is based upon the authorisation of private or public establishments to test one or more genera of plants. Applicants can choose to submit their varieties for testing by a CTC or continue to do the test themselves. Remember, using a CTC to test your variety is voluntary.

The use of CTCs recognises the advantages of testing a larger number of candidate varieties (with a larger number of comparators) in a single comprehensive trial. Not only is there an increase in scientific rigour but also there are substantial economies of scale and commensurate cost savings. A CTC will establish, conduct and report each trial on behalf of the applicant.

The PBR office has amended its fees so that cost savings can be passed to applicants who choose to test their varieties in a CTC. Accordingly, when 5 or more candidate varieties of the same genus are tested simultaneously, each will qualify for the CTC examination fee of $920. This is a saving of more than 40% over the normal fee of $1610.

Trials containing less than 5 candidate varieties capable of being examined simultaneously will not be considered as Centralised test trials regardless of the authorisation of the facility. Candidate varieties in non-qualifying small trials will not qualify for CTC reduction of examination fees.

Establishments wishing to be authorised as a CTC may apply in writing to the PBR office outlining their claims against the selection criteria. Initially, only one CTC will be authorised for each genus. Exemptions to this rule can be claimed due to special circumstances, industry needs and quarantine regulations. Authorisations will be reviewed periodically.

Authorisation of CTCs is not aimed solely at large research institutions. Smaller establishments with appropriate facilities and experience can also apply for CTC status. There is no cost for authorisation as a CTC.

APPLICATIONS FOR AUTHORISATION AS A 'CENTRALISED TESTING CENTRE'

Establishments interested in gaining authorisation as a Centralised Testing Centre should apply in writing addressing each of the Conditions and Selection Criteria outlined below.

Conditions and Selection Criteria

To be authorised as a CTC, the following conditions and criteria will need to be met:

Appropriate facilities
While in part determined by the genera being tested, all establishments must have facilities that allow the conduct and completion of moderate to large-scale scientific experiments without undue environmental influences. Again dependent on genera, a range of complementary testing and propagation facilities (e.g. outdoor, glasshouse, shadehouse, tissue culture stations) is desirable.

Experienced staff
Adequately trained staff, and access to appropriately accredited Qualified Persons, with a history of successful PVR/PBR applications will need to be available for all stages of the trial from planting to the presentation of the

analysed data. These staff will require the authority to ensure timely maintenance of the trial. Where provided by the PBR office, the protocol and technical guidelines for the conduct of the trial must be followed.

Substantial industry support
Normally the establishment will be recognised by a state or national industry society or association. This may include/be replaced by a written commitment from major nurseries or other applicants, who have a history of regularly making applications for PBR in Australia, to use the facility.

Capability for long-term storage of genetic material
Depending upon the genus, a CTC must be in a position to make a long-term commitment to collect and maintain, at minimal cost, genetic resources of vegetatively propagated species as a source of comparative varieties. Applicants indicating a willingness to act as a national genetic resource centre in perpetuity will be favoured.

Contract testing for 3rd Parties
Unless exempted in writing by the PBR office operators of a CTC must be prepared to test varieties submitted by a third party.

Relationship between CTC and 3rd Parties
A formal arrangement between the CTC and any third party including fees for service will need to be prepared and signed before the commencement of the trial. It will include among other things: how the plant material will be delivered (e.g. date, stage of development plant, condition etc); allow the applicant and/or their agent and QP access to the site during normal working hours; and release the use of all trial data to the owners of the varieties included in the trial.

One trial at a time
Unless exempted in writing by the PBR office, all candidates and comparators should be tested in a single trial.

One CTC per genus
Normally only one CTC will be authorised to test a genus. Special circumstances may exist (environmental factors, quarantine etc) to allow more than one CTC per genus, though a special case will need to be made to the PBR office. More than one CTC maybe allowed for roses.

One CTC may be authorised to test more than one genus.
Authorisations for each genus will be reviewed periodically.

Authorised Centralised Test Centres (CTCs)

Following publication of applications for accreditation and ensuing public comment, the following organisations/individuals are authorised to act as CTCs. Any special conditions are also listed.

Name	Location	Approved Genera	Facilities	Name of QP	Date of accreditation
Agriculture Victoria, National Potato Improvement Centre	Toolangi, VIC	Potato	Outdoor, field, greenhouse, tissue culture laboratory	R Kirkham	31/3/97
Bureau of Sugar Experiment Stations	Cairns, Tully, Ingham, Ayr, Mackay, Bundaberg, Brisbane QLD	*Saccharum*	Field, glasshouse, tissue culture, pathology	G Piperidis	30/6/97

Proteaflora Nursery Pty Ltd	Monbulk, VIC	*Plectranthus*	Fogged propagation house, greenhouses and irrigated outdoor facilities	Paul Armitage	30/6/04
Berrimah Agricultural Research Centre	Darwin NT	*Zingiber*	Irrigated shadehouse, outdoor facilities, cool storage, high level post entry quarantine facility, tissue culture lab, pathology and entomology diagnostic services	D Marcsik	30/9/04
Ball Australia	Keysborough, VIC	*Impatiens, Verbena*	Controlled climate glasshouse and environment rooms, germination chamber, quarantine house, cool storage, irrigation and outdoor facilities.	M Lunghusen	30/9/04
Floreta Pty Ltd	Redland Bay QLD	*Bracteantha*	Purpose built, secure greenhouse, access to fog house, registered quarantine facility on site.	K Bunker	31/12/04
Boulevarde Nurseries Mildura Pty Ltd	Irymple VIC	*Zantedeschia*	Glasshouse, shade house, propagation facilities, field areas, irrigation, cool rooms, tissue culture lab, hydroponics, quarantine facilities	K Mullins	31/12/04

Buchanan's Nursery	Hodgsonvale, QLD	*Prunus*	Outdoor facilities including a collection of 90 varieties of common knowledge.	P Buchanan	31/12/04
Ball Australia	Keysborough, VIC	*Calibrachoa, Osteospermum*	Controlled climate glasshouse and environment rooms, germination chamber, quarantine house, cool storage, irrigation and outdoor facilities.	M Lunghusen	30/9/05
Queensland Department of Primary Industries, Southedge Research Centre	Mareeba, QLD	*Mangifera*	Glasshouse, shadehouse, laboratory complex including biotech, propagation , outdoor facilities	I Bally	30/09/05
Blueberry Farms of Australia	Corindi Beach NSW and optional sites Tumbarumba NSW and Tasmania	*Vaccinium*	Extensive irrigated growing beds. Birds, hail and frost protection. Post harvest facilities including cool rooms. Access to tissue culture laboratories.	I Paananen	15/10/07
Ball Australia	Keysborough, VIC	*Kalanchoe*	Controlled climate glasshouse and environment rooms, germination chamber, quarantine house, cool storage, irrigation and outdoor facilities.	M Lunghusen	3/6/08
PBseeds	Horsham, VIC	*Lens culinaris*	Glasshouse, shadehouse, small plot equipment, seed production, processing and long term storage	T Leonforte G Kadkol	5/7/11
Mansfield Propagation Nursery Pty Ltd	Carrum Downes and Skye, VIC	*Lomandra*	Propagation greenhouses and indoor and outdoor growing areas.	M Lunghusen	7/11/11
Ramm Botanicals	Kangy Angy, NSW	*Anigozanthos*	Tissue culture, environment controlled greenhouse; extensive outdoor and shadehouse areas.	Ryan Weber Megan Bartley	10/2/12
Outback Plants Pty Ltd	Cranbourne, and Longwarry VIC	*Aloe*	Propagation greenhouses and indoor and outdoor growing areas.	M Lunghusen	10/12/12
Solan Pty Ltd	Waikerie SA	*Solanum tuberosum*	Tissue culture, plastic covered nursery, refrigerated storage; experience with comparator growing trials	J. Fennell	10/1/13
GeneGro Pty and V & CM Zorin	Birkdale, QLD	*Desmanthus*	Irrigated field trial areas; laboratory and related equipment; access to dryers and heated glasshouse.	D Loch M Zorin	22/7/2014
Tahune Fields Nursery	Huon Valley Southern Tasmania	Pome Fruit	Comprehensive equipment and facilities for large scale propagation, growing, conditioning, storage, marketing and transport	G Brown	12/03/2015

The following applications are pending:

Name	Location	Genera applied for	Facilities	Name of QP
Agronico Technology Pty Ltd	Leith, TAS	*Solanum tuberosum*	Access to tissue culture storage and minituber production facilities (VICSPA accredited), for storing and multiplying varieties in preparation for testing.	Stewart McKay James Hills
Haar's Nursery	Somerville, VIC	*Erysimum, Impatiens***, *Nemesia*	Propagation greenhouses; indoor and outdoor growing areas	M. Lunghusen
Highsun Express**	Ormiston and Toowoomba	*Pelargonium, Verbena and Petunia*	Climate controlled greenhouses, shade houses, outdoor growing areas, germination chambers, cool rooms, an approved quarantine facility	D Singh M Zorin
Yates Botanical Pty Ltd**	Somersby and Tuggerah, NSW	*Rosa*	Tissue culture lab, glasshouse, quarantine and nursery facilities	I Paananen
Aussie Winners Pty Ltd	Redland Bay, QLD	*Fuchsia*	Comprehensive growing facilities	I Paananen
Schreurs Australia Pty Ltd**	Leppington, NSW	*Rosa*	Comprehensive growing facilities	I Paananen
GrapeCo Pty Ltd	South Merbein, VIC	*Vitis vinifera* (Table Grape only)	Drip irrigation. Cool rooms are being installed.	A MacGregor
GeneGro Pty Ltd	Birkdale, QLD	*Lablab purpureus*	Irrigated field trial areas; laboratory and related equipment; access to dryers and heated glasshouse.	D Loch M Zorin
G Crumpton & Sons & Co Pty Ltd	Crawford, QLD	*Duboisia*	Comprehensive growing facilities	D Loch

** = Please note that these organisations have been requested to submit a special case based on technical reasons and other grounds to allow an additional CTCs to be accredited for the genera in question. Accordingly, publication of their pending application does not infer that any decision regarding accreditation has been made at this time.

† = Following the 2012 restructuring within the Queensland Government, the CTC for *Cynodon, Zoysia* and other selected warm season-season turf and amenity species at Cleveland, Queensland previously conducted by Department of Primary Industries, Redlands Research Station, will now be run at the same location by Turf Australia.

Comments (both for or against) either the continued accreditation of a CTC or applications to become a CTC are invited. Written comments are confidential and should be addressed to:

Closing date for comment: 30 June 2016.

APPENDIX 7 List of Classes for Variety Denomination Purposes

UPOV Variety Denomination Classes: (UPOV/INF/12/1: ANNEX I)

A Variety Denomination Should not be Used More than Once in the Same Class

For the purposes of providing guidance on the third and fourth sentences of paragraph 2 of Article 20 of the 1991 Act and of Article 13 of the 1978 Act and the 1961 Convention, variety denomination classes have been developed. A variety denomination should not be used more than once in the same class. The classes have been developed such that the botanical taxa within the same class are considered to be closely related and/or liable to mislead or to cause confusion concerning the identity of the variety.

The variety denomination classes are as follows:

(a) General Rule (one genus / one class): for genera and species not covered by the List of Classes in this Annex, a genus is considered to be a class;

(b) Exceptions to the General Rule (list of classes):

(i) classes within a genus: List of classes in this Annex: Part I;

(ii) classes encompassing more than one genus: List of classes in this Annex: Part II.

LIST OF CLASSES

Part I

Classes within a genus

	Botanical names	UPOV codes
Class 1.1	Brassica oleracea	BRASS_OLE
Class 1.2	Brassica other than Brassica oleracea	other than BRASS_OLE
Class 2.1	Beta vulgaris L. var. alba DC., Beta vulgaris L. var. altissima	BETAA_VUL_GVA; BETAA_VUL_GVS
Class 2.2	Beta vulgaris ssp. vulgaris var. conditiva Alef. (syn.: B. vulgaris L. var. rubra L.), B. vulgaris L. var. cicla L., B. vulgaris L. ssp. vulgaris var. vulgaris	BETAA_VUL_GVC; BETAA_VUL_GVF
Class 2.3	Beta other than classes 2.1 and 2.2.	other than classes 2.1 and 2.2
Class 3.1	Cucumis sativus	CUCUM_SAT
Class 3.2	Cucumis melo	CUCUM_MEL
Class 3.3	Cucumis other than classes 3.1 and 3.2	other than classes 3.1 and 3.2
Class 4.1	Solanum tuberosum L.	SOLAN_TUB
Class 4.2	Solanum other than class 4.1	other than class 4.1

LIST OF CLASSES (Continuation)

Part II

Classes encompassing more than one genus

	Botanical names	UPOV codes
Class 201	Secale, Triticale, Triticum	SECAL; TRITL; TRITI
Class 202	Panicum, Setaria	PANIC; SETAR
Class 203*	Agrostis, Dactylis, Festuca, Festulolium, Lolium, Phalaris, Phleum and Poa	AGROS; DCTLS; FESTU; FESTL; LOLIU; PHALR; PHLEU; POAAA
Class 204*	Lotus, Medicago, Ornithopus, Onobrychis, Trifolium	LOTUS; MEDIC; ORNTP; ONOBR; TRFOL
Class 205	Cichorium, Lactuca	CICHO; LACTU
Class 206	Petunia and Calibrachoa	PETUN; CALIB
Class 207	Chrysanthemum and Ajania	CHRYS; AJANI
Class 208	(Statice) Goniolimon, Limonium, Psylliostachys	GONIO; LIMON; PSYLL_
Class 209	(Waxflower) Chamelaucium, Verticordia	CHMLC; VERTI; VECHM
Class 210	Jamesbrittania and Sutera	JAMES; SUTER
Class 211	Edible Mushrooms	
	Agaricus bisporus	AGARI_BIS
	Agaricus blazei	AGARI_BLA
	Agrocybe cylindracea	AGROC_CYL
	Auricularia auricura	AURIC_AUR
	Auricularia polytricha (Mont.) Sscc.	AURIC_POL
	Dictyophora indusiata (Ventenat:Persoon) Fischer	DICTP_IND
	Flammulina velutipes	FLAMM_VEL
	Ganoderma lucidum (Leyss:Fries) Karsten	GANOD_LUC
	Grifola frondosa	GRIFO_FRO
	Hericium erinaceum	HERIC_ERI
	Hypsizigus marmoreus	HYPSI_MAR
	Hypsizigus ulmarius	HYPSI_ULM
	Lentinula edodes	LENTI_ELO
	Lepista nuda (Bulliard:Fries) Cooke	LEPIS_NUD
	Lepista sordida (Schumacher:Fries) Singer	LEPIS_SOR
	Lyophyllum decastes	LYOPH_DEC
	Lyophyllum shimeji (Kawamura) Hongo	LYOPH_SHI
	Meripilus giganteus (Persoon:Fries) Karten	MERIP_GIG
	Mycoleptodonoides aitchisonii (Berkeley) Maas Geesteranus	MYCOL_AIT
	Naematoloma sublateritium	NAEMA_SUB
	Panellus serotinus	PANEL_SER
	Pholiota adiposa	PHLIO_ADI
	Pholiota nameko	PHLIO_NAM
	Pleurotus cornucopiae var.citrinooileatus	PLEUR_COR
	Pleurotus cystidiosus	PLEUR_CYS
	Pleurotus cystidiosus subsp. Abalonus	PLEUR_CYS_ABA
	Pleurotus eryngii	PLEUR_ERY
	Pleurotus ostreatus	PLEUR_OST
	Pleurotus pulmonarius	PLEUR_PUL
	Polyporus tuberaster (Jacquin ex Persoon) Fries	POLYO_TUB
	Sparassis crispa (Wulfen) Fries	SPARA_CRI
	Tricholoma giganteum Massee	MACRO_GIG

* Classes 203 and 204 are not solely established on the basis of closely related species.

APPENDIX 8

REGISTER OF PLANT VARIETIES

Register of Plant Varieties contains the legal description of the varieties granted Plant Breeder's Rights. A person may inspect the Register at any reasonable time. Following are the contact details for Registers (1988-2000) kept in each state and territories*

South Australia

Ms Lisa Halskov
AQIS
8 Butler Street
PORT ADELAIDE SA 5000
Phone 08 8305 9706

New South Wales

Mr. Alex Jabs
General Services
AQIS
2 Hayes Road
ROSEBERY NSW 2018
Phone 02 9364 7293

Victoria and Tasmania

Mr. Colin Hall
AQIS
Building D, 2nd Floor
World Trade Centre
Flinders Street
MELBOURNE VIC 3005
Phone 03 9246 6810

Queensland

Mr. Ian Haseler
AQIS
2nd Floor
433 Boundary Street
SPRING HILL QLD 4000
Phone 07 3246 8755

Australian Capital Territory, Northern Territory and Western Australia
ACT and NT Registers are kept
in the Library of PBR Office in Canberra
Phone (02) 6283 2999

* In accordance with an amendment to section 61 of Plant Breeder's Rights Act, from 2002 the Register of Plant Varieties will be available from the Library of PBR Office in Canberra. The Register is also electronically available from the PBR website at http://pericles.ipaustralia.gov.au/pbr_db/

Plant Varieties Journal Mailing List

The Plant Varieties Journal mailing list informs subscribers whenever the new journal is posted on the IP Australia web site.
